Did you read features.new that cames with 2.02? A WHOLE BUNCH of files
were moved from the root and spool directory to the \nos\etc directory.
One of these was the domain.txt file.

Maybe. I've never worked on the UHF radios, but the VHF radios are
phase modulated, which is inherent unsuitable for 9600 baud operation.
If the UHF radio is also PM, then you'll have to modify it.

>Someone also told me this is a 90 watt unit...does anybody have ANY

1580. RM-8737 - was Re: 33cm band and spread spectrum tech

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-03-26 00:00:00 UTC
From: landisj@nad.com
Message-ID: <1996Mar26.160016.489@nad.com>
Source record: 37970

In RM-8737, the ARRL quietly petioned the FCC last December to relax the
restrictions on SS operations in ALL bands 144mhz(I think) and above.
The deadline for comments expired a few weeks ago.

This was discussed in detail on the vhf reflector, with many weak signal
operators filing comments with the FCC urging this be reconsidered.

Does anyone have the original text of RM-8737 to post? Even a way for a
non-ftp site to obtain it would be fine.

In general I think relaxing the rules on SS experimentation is fantastic,
and a great way to put more users on the higher bands. But on the other hand,
it needs to be carefully controlled so as not to interfere with at least
weak signal users, and probably should not take place on the bands below
903mhz.

73,
Joe - AA3GN

Dave,
Who sent you the information? I would be interested in seeing it. Working on a balloon project over a year ago, I asked for the same info. of the group here and got nothing. Even contacted a couple of people at TAPR. No help. Some research on HDLC and TCP as well as studying some tranceiver chip specifications got me started. But I had to put a logic analyzer on a TNC to get the final answers. Kind of frustrating. From scratch, I have basic and 68hc11 code both for the CRC used in packet. Is there any published text on the subject?

WWW is alive and well over TCP and packet here in Colorado. Our area is served by two 9600 baud digital repeaters (more to come) providing 500 bytes-per-second throughput (a 14.4 modem provides 1600 bytes-per-sec). Performance is quite acceptable as long as you turn off graphics in your browser or stay away from sites that have much graphics.

Things will get better when we install our 56kb digital repeater :-)

See http://www.rmsd.com/hamradio/dwg.html for some background on what we're doing here on TCP. Dale already mentioned the southeast. Other areas with high TCP activity are Seattle at http://www.wetnet.ampr.org/ and Ottawa at http://hydra/carleton.ca/

>I need to get into TCP/IP over packet radio. Thanks Steve

Steve, I wrote an article in the July 1995 QST on how to get Linux up and running as a web server for packet using the native ax.25 in the Linux kernel. I used the system on 440 MHz 9600 bps packet and it worked great. At 9600 bps you cannot have huge graphic files. Text flows smoothly, however. Now if you move to spread spectrum you'll have something. Also you can consider 56kbps modems.

The idea was to create a hub based system (ala' N6GN style) and have the users buy TEKK radios and 3 ele beams to point at the hub. Then link the hubs using 56kbps.

My article was NOT on how to link the internet to packet. I'd rather we build our own stand-alone system and link into the internet every once in a while. This way, when the rf link is needed, such as in a disaster and phone lines are down, the packet side of the link is up a running.

Have fun!

Steve, N7HPR

Yes thats what I thought going into this and was very
surprised at the results. The coax is not visibly damaged and
resistance checks are fine. I might have messed up the transition
to the PL-258's, will re-do them again.
>

When Windows 95 install program is run, if you left your KAM turned on,
the install program looked at that port, and screwed up the KAM configuration.
You need to open up the KAM and do a HARD reset. That will permanently clear
the problem.

Well that sounds more like a good argument for upgrading your
packet setup than it does as an argument against better applications
appearing on packet. I'm sure the web would crawl with a 1200 baud
telco modem too, if anyone bothered to still use such antique modems
on the phone. At 56 kb, the web flies just fine on packet.

You are correct, as usual... I did notice that. Not a big deal in my case and the final 'tweak' on the site put everything on target. Ah, being able to hook the sweep generator to the 'antenna end' of the cable was a definite plus for the final adjustments ! (Obviously, this may not be an option if the cable is already on the tower :)

Well first of all they aren't really operating systems in the conventional sense. They're just DOS programs that let you do TCP/IP connections from the keyboard via a built in set of applications, IE telnet, ftp, etc. They will *not* multitask external programs, so while there is a kludgy way to call an external program, the "OS" stops while the other program executes, and only resumes when the external program gives control back.

If you want native TCP/IP features at the OS level, ignore these programs and run Linux with native TCP/IP and the AX.25 drivers. That'll let you use the functionality of TCP/IP networking with your applications over radio just as you would over the ethernet.

>
>Any info on when will the 56k modem
>will be available fromm PacComm
>and what price ?

The PacComm ads, which have been running in QEX for some time, list the price as $349. The ship date in the ads is late '95. They've obviously missed that target date. I've seen the prototype, and played with beta units (which are quite nice), but don't know when volume production will actually start (they may be aiming to roll them out at Dayton, but I don't know that for a fact).

Of course you can still buy a kit from GRAPES for $250 if you don't want to wait for the W&T units from PacComm. The kits are 3 boards instead of one, but they are fully interoperable with the more manufacturable design. You just have to make a wiring harness (and supply your own case, power supply, and channel crystal).

The kits are probably better for split site and digital repeater use than the new PacComm unit, but the PacComm unit is certainly more convienent for home use or for trunks. Having a synthesizer means you don't have to buy any crystals, it's already packaged, and it has a signal strength indicator that can be useful for aligning links.

Relegating anything to 900 MHz and above ensures no one will use it. Line of sight is not much more fun than a telephone.

I think Hams should not use SS. They should be restricted to Morse Code only. The only amplitude modulation should be AM, with no suppression of carrier allowed. All FM priveledges should be revoked.

There, now you can do weak signal and not be interferred with.

Seriously now, I think that all of Ham radio should be split up into SS segments. The AM and FM modes (SSB, FSK, etc) should be made obsolete. All rigs on HF should be FH mode SS systems. No frequency by any Ham will be occupied for more than 100 milli-seconds. If you want to use morse-code, you will have to select a channel and modulate the SS system. Same with audio and data.

I had the opposite problem. 1.4 was locking up, and I upgraded to 1.5
and the problem went away. Now I'm at 1.6.
But, I really think its RF geting into the computer that mostly
causes lockups. Seems logical, as its always SEND mode when it hangs.
So, try some grounding and shielding first. And get the antenna
far up and away from the computer.

1612. Kantronics Help!

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-03-28 00:00:00 UTC
From: cgreenha@magnus.acs.ohio-state.edu
Message-ID: <cgreenha.265.315B0D4A@magnus.acs.ohio-state.edu>
Source record: 37908

Hello all.

I have a friends Kantronics Paket Communicator. No version number...so I assume its their first one. The man. date is 1985, its in a white case, has no mail box, and only has 3 front lamps (xmit, rcv, and power).

The problem is this; the unit works fine, but only for about 10 or 15 minutes. After that, the recieve audio begins to chop, which is supplied via stand alone cable, 1/8 mono plug in...to 1/8 mono plug out.

Now the tricky part...if we remove the data/ptt cable, it "hears" fine. We have quadruple checked this cable, including an amp load test, and its integrity is fine.

BTW, its interfaced with a Kenwood 241a, and we have tried 3 different 241s.

Any ideas, suggestions, help?

Thanks much, & take care.

:>commercial software, or use freeware, just want something that works
:>well and is relatively bug free...
:>Please email with any info..
:>Thanks
:>Tim
:>NZ8J
:>

There is a program called "paKet 6" that really works well with the
PK-232 and it has a lot of nice features. It does not have all mode
support built into it but if you know the keyboard commands for each
mode you can run any mode with it. Overall it is a heck of a nice
program.

I have also been using the PC-Pakratt II for Windows program. It
supports all modes of operation and works with any TNC that AEA
has on the market. It works great with Windows 3.1. There does seem
to be a little glitch when used with Windows 95. When you select and
save a font, it does not always come up with that font when you run
the program. I am not overly concerned by that though.

Another program I have been playing with is called WinPack 5.4.
It is freeware and is one heck of a nice packet program for 2 meter
operation. It supports multimedia sounds, gets your mail and
bulletins off the local BBS automatically and does Yapp file transfers
for a starter. NOT TOO SHABBY!

Hope this helps a little ... Bye

1614. Re: TCP/IP w/ BAYCOMM and W95

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-03-28 00:00:00 UTC
From: Andy Walton <andrew.c.walton@dsto.defence.gov.au>
Message-ID: <4jdf1n$f9l@foxhound.dsto.gov.au>
Source record: 37910

G'day there,
From time to time I see this argument pops up about
using Baycom style modem using a MS Windows platform.The answers
are allways the same "It can't be done".

This is True/False. It is NOT possible to run a Baycom modem on a machine running windows. It never will be unless someone very clev=
er writes a fancy bit of code, which is beyond the ability of myself.

However, you can run it if you go about it the right way.
Heres how-:

1)You need an old PC, 10 MHZ XT or better, 1.4 meg floppy drive minimum,10 meg hard disk is nice.Laptops probably won't work(they ha=
ve funny serial ports that don't like baycom modems).Cost expended here should be less than $100 AU

This will be our TNC or baycom packet switch(and much cheaper than a "REAL" TNC. This is connected to the radio via Baycom modem.

2)Latest wiz bang computer (1 Ghz pentium (or P6 even better) running your flavour of windows). For this I use a 16 Mhz 286 running =
win 3.1, under dos6.22

3)A scheme to connect them together. I use second hand 8 bit
ethernet cards that cost $5 at one of the local sunday computer
flea markets that we have here in Melbourne. Alternately you could
uses a serial port link, running slip.

4)THE SECRET.........

Configure the older PC to run a NOS programme that supports
packet drivers.

I use JNOS ver 110j.

Get hold of the ax25 packet driver and load it up.Select a s/w
interrupt of say 0x60.

Load up the ethernet packet driver, select a s/w intterrupt of say
0x61.These are available from The Simtel repository.You could use a
slip packet driver if you wanted. I havn't tried it but there is
no reason it shouldn't work.

Now the fun and frustration begins. You have to set up the routing
tables and arp table on the NOS machine. Read the documentation
VERY CAREFULLY. You will have to familiarise yourself with the
route add, arp add, arp publish commands intimately.

The idea is that the older pc acts as as TNC/Router and routes the packets to/from the wiz bang machine running windows. Suppose you want to have an ax25 session with your local packet bbs. Connect to your router running your favourite winsock complient telnet program. ie "connect ax25 vk3ksd" and you have a session running on your machine, in windows. You can telnet to your tnc/router, and telnet from it to your local tcp/ip packet switch. Or you can telnet directly to your local tcp/ip packet switch, with your TNC/Router just passing the packets back and forth without doing any processing. That is the actual telnet session happens on your windows machine. Also works using ftp and ping.

The reason I devised this was so that I could operate packet radio inside the house as opposed to out in the ham radio shack where I get accused of being anti-social !!

But be warned, NOS can be a pretty user-hostile (as opposed to user-friendly) thing to get going, but persavere with it and you will be rewarded. Use the trace facility to see what is actually going on. On the remote machine, initially run NOS before running windows to ensure that you have got the routing tables sorted out. For the ethernet link you can assign yourself any ip address starting with 10.x.x.x as this class A address is reserved for private networks. You will also have to aquire two ip addresses (44.x.x.x)

If you run Windows for Workgroups, Microsoft have a free add-on TCP stack,but it doesn't support slip.

So lets hope thats settles the Baycom for windows questions
(Until someone writes a fancy DLL)

Enjoy

Hello,

if you need more information about PC/FlexNet, want to send a mail to the
French team, read the latest "Bulletin FlexNet" (in French), so try :

http://www.imaginet.fr/~ferracci/flexnet

An English version is planned, but not working yet. Therefore, the WWW pages
are only intended for french-speaking hams at this moment.

However, manuals are now available in French, English, Spanish, and German.
They'll help you understanding this wonderful digipeater and the way it works
(nothing to do with the old Netrom or Rose systems).

MVDAMME@xs4all.nl (Maarten van Damme) writes:

>Hello,

>In this months CQ I noticed that many packet modem ad also contained
>the caption "Now does GPS"!

If you could, I'd like to know more information about this and
other similar products. One mode of GPS is Differential GPS (DGPS).
In this mode, 2 GPSs are required: a base at a fixed and known lat/long,
and a mobile one. The mobile one and fixed one must communicate to
eliminate errors in the government-added noise and atmospheric noise
of the GPS signal. DGPS decreases the typical GPS error from ~100meters
to ~1meter.

We're building a vehicle that will navigate with DGPS and require
a 2-way radio link at at least 1200 baud. We're looking for a very
inexpensive way to implement this. (some RF RS-232 would be perfect)
It doesn't have to have multiple receivers or transmitters on the
channels. 2 channels, 2 nodes, that's it.

If anyone has any information, please let me know! (I have about
5 weeks to wrap this part up)

Jake

1618. Help: Want cheap >=1200 bps digital link < 1 mile

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-03-28 00:00:00 UTC
From: janovetz@eehpx3.cen.uiuc.edu
Message-ID: <4jcu8n$fh8@vixen.cso.uiuc.edu>
Source record: 37992

Hello,

For a Differential GPS application, I am looking for an inexpensive
way to implement a 2-way digital radio link between 2 nodes (no more).
I have a minimum requirement of 1200bps full-duplex. Two one-way
radios is acceptable assuming they work on different channels. Ideally,
the thing would take RS-232 I/O and have RS-232 I/O on the other end.
It doesn't need to work very far (less than 1 mile).

I'm also considering building one using the Motorola 3362 Wideband
FSK receiver on the receiver end and a simple FSK transmitter on the
other end. The only problem with this approach is that I may not
have time to design/build/test it within the 5 week time constraint.

If anyone has ANY information on buying something for this
part of the project or building one, please mail me any advice or
suggestions!!!

Thanks!

Jake

>bytes-per-second throughput (a 14.4 modem provides 1600 bytes-per-sec).

Perhaps I've been living in the past, and if so will someone please
correct me. But I thought routing traffic *from* the Internet *to* packet
radio was a no-no mainly because of the profanity that could slip through?
Now I know there are some Internet<->Packetradio G/Ws out there and perhaps
they exist because the sysop monitors and review all outgoing messages,
but how is that going to work for httpd?

Also wouldn't the viewing of some commercial URL be considered using ham
radio for commercial uses?

Again, this is not a flame or spam. I sold my Grapes DSY and my MM432-28
xverter a while back when I found out about all these restrictions in ham
radio packet. If things have changed, or if I've been mis-informed all along,
I would have had 56Kbit running in Los Angeles 4 years ago.

Any enlightenment appreciated.

Hi - this probably is not the best place to put this plea for help but it'll have to do.
I just bought (for $20) an AMSTRAD PC2286/40 Computer to dedicate to JNOS activity - problem is its been sitting in someones garage for years & batteries were very flat & the thing has "lost its memory" & consequently I cant access the 40 mb hard drive - on bootup it just tells me to run SETUP to set user options. I have searched local sources & the entire Internet & I cannot find anyone who has the setup exe or the disks etc.
Does anyone in this group have such disk(s) & if so could you e-mail me whatever I need to tell the damn thing its got a hard drive!

Source record: 37915

Hi....

I am trying to set up a TC/PIP port using Winsock.
I have set it up for SLIP operation but still cannot get it to talk to the TNC.
I am using a PK-88 on Com 2.
I was also looking at trying it on a Baycom modem or my Type 2 DRSI, by interfacing with BPQ, but have been unable
to do this.
The idea behind it is that I can set up and run a TC/PIP gateway, with TC/PIP on one of the ports, while leaving the
others free for AX25 with FBBwin 7.

I would appreciate any response from anyone who has acheived this, and can shed some light on how to go about it.

Thanks
Tony

I have been offered an old Kantronics KAM TNC.

It does not seem to know the latest HF modes (e.g. PACTOR, G-TOR).

What are the upgrade possibilities for it?

The serial number is 100 06262 and the EPROM has a label '2.85'.

Thanks,

Luru

I believe these folks are talking about an *amateur radio* www, not necessarily involving a connection to the internet. There's no reason we can't put up our own amateur web pages and let others browse them, all over amateur radio with no wireline types involved at all. If connections to the wireline are allowed, you're right that there is the potential for problems. For example, a user accessing www.playboy.com might cause a stir on the radio side.

>Also wouldn't the viewing of some commercial URL be considered using ham
>radio for commercial uses?

Not under current rules, as long as the amateurs have no commercial interest in the site. See the "order a pizza over the autopatch" rules change.

Source record: 37922

Phil Karn (karn@qualcomm.com) wrote:
: I did some thinking about this problem about 5 years ago, but
: I haven't actually implemented anything. Check the ARRL Computer
: Networking Conference proceedings in that time frame.

: I think it was the 1991 conference at which I presented my ideas
: for minimum interference routing. This is very similar to, but
: not quite the same as, minimum energy routing.

I did some further looking. In the literature, there are only two cases
that have been studied as far as power control goes.

First, the case of cellular phone stations. The idea is to optimize power
to take care of shadowing and similar problems. They end up converting the
problem into a linear or integer programming problem and solve it at the
base station.

The second case involves CSMA type networks with various assumptions which
includes the assumption of high load. In this case, they (intuitively) always
come up with a result that you want to talk to the nearest available node
which is in the appropriate direction using minimum power. Under light
traffic obviously the opposite is true.

In the "MACAW" algorithm which is an extension of the ideas in "MACA", the
authors further developed the backoff and RTT timer controls that the
"MACA" papers you (Phil Karn) published didn't get into.

The upshot though is this: Let's say that you can accurately measure the
delay in a given channel via the backoff timers and/or the actual measured
packet delay. This gives you a distance metric and you can then apply this
to an SPF routing algorithm (or some modification of it).

The routing algorithm will of course keep picking higher power until traffic
starts to build up, at which point it will pick the more local links which
incur extra hops simply because the congestion using the "giant step" links
has gotten too bad.

The one problem mentioned in the "MACAW" algorithm is a particular
configuration of transmitters and receivers. I think the way around the
problems of "fairness" in "MACAW" is to add randomized delays at each node,
so that other nodes can't totally capitalize on a network resource.

"Macnet Roster" (ver. 739) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Or connect to my home page via the WWW

http://www.mv.com/ipusers/wd1v

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

Hello All,
I have a kantronics plus, HTX-202, 20w Amp,and A 5/8 collinesr antenna. When I use the following programs everything works right; Pacterm, HostMaster II, or JNOS. However when I use APRS (I have tried both ver 7.b and 7.5a) I receive fine. But no one can decode my packets. They get a s-3 to s-9 signal level when I xmit but, nothing on there screen. If they listen to the packet burst it has been discribed as sounding hot. I am thinking for adjusting the discriminator in the tnc. Anyone have any ideas as to what is happening? Thanks for any suggestions that you can offer.

Hi I've been bitten by the bug of packet radio and before getting too crazy over it would like to request some info. I'm currently NOT licenced tho have purchased the study materials and begun reading tho.

Anyway what I'd like to know is, does there exist any Gateways to the Internet via Packet in the Brooklyn New York area or any of the 5 boro's?
Or is packet more like local BBS's?
What is the average Baud rate? I've seen folks mention 56k but it didn't seem to be the norm tho I'd be happy with 14.4k or 28.8k(I use 28.8k modem via land line now).
Another thing that perplexes me....Why do the TNC's need RAM for mail boxes? Don't they simply route the incoming mail to the connected Computer? Or does the RAM act as a Buffer/Spool?
Also if you could recommend a Basic inexpensive Radio for Packet use that'd help. Recomendation of a High Speed TNC would be nice as well.
I'd like to keep the outlay of funds to under $400-$500 if possible and not averse to used equipment.

Lastly I know my current Internet provider connects to the Net via Satellite is this Doable with a Technician's Licence?

As you may have noticed I'm pretty GREEN so any help would be appreciated.
So far I've been reading CQ and Gordon West's No Code Technician study book.

Thanx for the help folks.

The question you have to ask in regards to SS when people start to discuss things are:

Okay, so you think it will raise the noise floor --

1. please define the noise floor,
2. how does one measure it, and
3. why or how much does it have to be rasied to stop you from doing what you do now.

Then, how many amateurs have equipment to measure noise floor and how many amateurs have equipment that can operate at the noise floor ?

If not, where do they operate in respect to the noise floor ?

In regards to sub-bands:

How long do you think it will be before someone in the amateur satellite community is building a SS satellite ?

One is rleady being built called PANSAT and is suppose to be launched in the next 2 years. It operates on a center of 436.5 (http://www.sp.nps.navy.mil/pansat/pansat.html)

How long before weak signal operators want to operate SS ?

Right now. Phil Karn has shown that with the correct encoding techniques you can receive people when you can't hear them any longer. Is that weak signal enough ? You do it right and you could probably operate EME off your really good satellite systems!

The demographics of amateur radio is going to drastically change in the coming 10 years.

Should we (amateur radio) be setting rules that limit the growth of amateur radio at a time when we need less regulations in order to change with the times before we die as a hobby ?

Why is it that modes other than 'traditional' modes are somehow held to a higher standard ? This in respect to many of the digital modes and other modes that come along.

All these items point to a classic paradigm shift.

It all comes down to what you think amateur radio is about. Is amateur radio about expanding the way we do things and along the way learning something and having fun or is amateur radio about maintaining the status-quo and becoming static.

Things to think about ?

Cheers - Greg, WD5IVD

PK-88 doesn't understand SLIP.
Winsock doesn't speak KISS and AX.25

Can't be done until the AX.25 VxD driver gets built. Best bet is to hook an
old XT up via ethernet and run JNOS.

(Don't get roped into TNOS, that is a BBS, not a TCP/IP. And you will pay
dearly in memory for it.)

It can be done, but why waste your time with 1.2 kbps...

> This is True/False. It is NOT possible to run a Baycom modem on a machine
> running windows. It never will be unless someone very clever writes a fancy bit of code
>
> However, you can run it if you go about it the right way.
> Heres how-:

Shoot. If you buy an old XT or AT to run Baycomm on, you can spend the same amount of money and buy a TNC... Better yet, get a KPC-9612 and join the 90's, instead of slopping around in the 1.2 kbps mud...

Ahh - so much for rational discussion. Never mind Steve, you can stay on
the DC bands and braaap to your hearts content, until you can buy an appliance
to use spread spectrum to connect you PC appliance to the Internet on the
former ham band at 2.3Ghz.

```

Chris; The radio is worth about $50 to $100.00 at a hamfest.

A 15 amp 12V D.C. should handle it with no trouble in packet service.
restuffed channel elements can be had for around $20.00 each, in exchange
for your old elements. Try 1-800-237-9654 CEH / Kirby Ent. in Cinci.
or Hy-Q 606-283-5000 in Ky (CInci area) or Sentry @ 1-800-252-6780
to name just a few, there are any number of people doing crystals.

The best way to find tech stuff about that radio is to call your local
G.E. dealer, there are any number of M - II 's still in service.
Try to find a friendly ham in one of the service shops.
(most have at least one)

Good luck.

>3. why or how much does it have to be rasied to stop you from doing what you
>do now.

Good questions, and not always easy to answer unambiguously. There are really 3 components to the noise floor. There's the receiver noise floor, usually determined with a MDS spec, there's a channel thermal noise floor stated in terms of kTB, and there's the QRM/QRN noise floor caused by manmade and natural signals competing for the channel, signals other than the desired one being treated as noise for this purpose. This latter term is the one raised by SS activity.

Often one of these terms so dominates that the others can be ignored. To answer your third point, a SS signal must contribute enough to the noise floor to dominate the other terms before it becomes a significant limit on weak signal operation.

>Then, how many amateurs have equipment to measure noise floor and how many
>amateurs have equipment that can operate at the noise floor ?

All amateurs have equipment that can operate at the noise floor, but the value of the noise floor can vary from one station to another because the equipment used sets one term of the noise floor calculation.

>If not, where do they operate in respect to the noise floor ?

Weak signal operators, almost by definition, operate as close to the noise floor as possible, with the irreducible kTB component being the one they want to be dominant.

Other operators usually desire to have a 10 db to 20 db *margin* above the noise floor for comfortable operation. And many actually achieve a 40 db to 60 db margin above the noise floor in routine operation.

>good satellite systems!

Yeah, but that considers only 2 of the components of the noise floor. If
many stations try to use weak signal SS at the same time, that third
component of the noise floor still starts to dominate, and everyone's
ultimate weak signal capability is degraded. The advantage of SS is that
the degradation is gradual, unlike when two narrowband signals clash.

Karn's demonstrations are of techniques that can work with narrowband
technology as well as with SS technology. They depend on generating
a coherent matched filter response in the receiver to the transmitted
signal, and using ECC techniques to handle burst errors. With most
SS technologies, these techniques are inherent, but they can be added
to narrowband technologies as well, and indeed Karn's web page examples
are just such narrowband examples.

We have to look deeper to find the unique advantages of SS. First there
is the degree of multipath resistance inherent in SS. And second there
is the lack of catastrophic failure when confronted by a competing narrowband
signal popping up in the bandpass. This can kill ordinary narrowband
weak signal operation, but only slightly degrades SS weak signal operation.

>modes that come along.

These are good questions. They deserve careful thought. IMHO regulations
should not be overly restrictive, and CCA'34 even requires that regulations
promote new and experimental uses of radio. However, at a voluntary level,
I think it is incumbent on experimenters to strive to see that their
experiments minimally impact other operations. In this regard, I suggest
that SS operators voluntarily avoid certain weak signal band segments
traditionally used by narrowband weak signal operators. This is not hard
to do, and it has very little effect on SS operation.

>All these items point to a classic paradigm shift.
>
>It all comes down to what you think amateur radio is about. Is amateur radio
>about expanding the way we do things and along the way learning something and
>having fun or is amateur radio about maintaining the status-quo and becoming
>static.

By all means we should strive to move forward. However when we can
easily do so without adversely impacting the operations of others,
we should choose that path. I believe SS is such a case. Other digital
operations of a narrowband nature are harder problems. They *do* directly
compete with other narrowband uses of the amateur spectrum, and traditional
methods *may* have to make accomodation for them. A realignment of sub-
bands may be necessary. IMHO these should not be bound into regulations,
but should be voluntary arrangements that are flexible enough to reflect
changing realities.

There is merit to the idea of allowing methods to compete on a level
playing field, with the winner triumphing and the vanquished forced
to leave the field. But that's also a rather harsh methodology in
a diverse voluntary service like amateur radio. It is sure to create
ill will, and if we can avoid that, we should attempt to do so, though
not at the cost of stopping progress.

I would rather not add anything onto the SX64; the beauty of the
machine is that it is self-contained. I have a tape version of
Digicom that I could convert if I knew what the IO ports were for
the cassette interface. These could then be mapped to the userport
IO ports with a little bit of recoding.

Thanks for the suggestion though,
Dave.

Source record: 37849

Tom Clark (W3IWI) just posted a good answer describing methods for obtaining high accuracy in GPS using DGPS (Differential GPS). These corrections are largely needed because of Selective Availability (SA) introduced into the "public" part of GPS to intentionally degrade its accuracy.

However, Tom didn't mention an article in his Saturday's Washington Post. There was a front-page article reporting that the White House has decreed that SA **will** go away. This will mean an accuracy on the order of 10-30 meters for everyone, without DGS. You'll still need DGPS to do better. The bad part is that they are talking about a phase-out over 4 to 10 YEARS.

Tom, please get your politics working on shortening the time, please, please!!!!

Brian,

I have a 1270c connected to a HTX 212 and everything is working fine.
The cable that I got from MFJ was wired wrong on one pin so as soon as
I fixed that everything was fine. I would suggest that you look
closely at the radio manuals and trace the wires to the correct
connections. Best way to do this is with a VOM using the continuity
tester.

The April edition of Ham Radio Online magazine is now available at
http://www.accessone.com/~vbook
or
http://www.accessone.com/~vbook/hronline.htm

This month features original stories on packet radio path quality, spread spectrum
communications, more information on making your own solar observations, getting started in shortwave listening and an amazing list of hidden or not so hidden renditions of Morse code in popular music. We will be adding more stories over the coming weeks - this is a dynamic magazine with upates appearing as often as daily.

As usual, Ham Radio Online also features Amateur radio newsletters from around the world, real-time ionospheric propagation reports, real-time aurora conditions,
real-time MUF calculations, real-time earthquake and severe weather reports and so much more.

Stop and by and enjoy. We are free - and free of ads too - your stories are always
welcome at Ham Radio Online.

Thanks and 73,
Ed and Kim Mitchell,
KF7VY and N7VPL

>old XT up via ethernet and run JNOS.

Actually, it has been done in a Packet Driver called ETHRAX25 and that works fine under Win3.1 with Trumpet Winsock and a shim called Winpkt. ETHRAX25 accepts Winsock requests and speaks KISS and AX.25. Just works.

(Yeah, yeah, not a VxD :-) "What the world really needs" is an NDIS 3.0 version of ETHRAX25...

You have to use 2 drivers to get TCP/IP under windows 3.1 to talk to
your TNC. You must first load ETHRAX25, this will convert ethernet
frames into AX25 and vice-versa. You also need the WINPKT driver
loaded.
You can then run Trumpet Winsock and use telnet, ftp, ping programs. I
use Win95 here now but I used 3.1 and trumpet Winsock for about a year
before and it worked fine. You can get ETHRAX25 from ftp at UCSD in the
HAMRADIO\PACKET\TCPIP\MISC directory.

Good luck and 73 de Jean-Pierre kc6jet

1659. open forum for packet users

Message-ID: <4jn3jk$11u@wing.redshift.com>
Source record: 37856

I have Web space availab le for articles anyone wants to submit on how
they (or someone they know) may have been treated poorly by packet sysops
-- mainly this applies to the more traditional "all-radio" network.

Details on my Web site: http://www.redshift.com/~orrin
and click on the link to "The Sysop Syndrome..."

Also (and this will be posted on rec.radio.amateur.antenna) i recently was
informed of a bug in my { rhom.bas rhom.exe] rhombic design program
which i have now fixed. Using Netscape, the DOS package is downloaded as
follows: ftp://redshift.com/orrin/112rhom.exe
The bug-fixed executable is rhom.exe; it was my first attempt to do the
rhombic program, in GWBASIC, and apparently the QuickBasic 4.5 compiler
didn't like some of the code; this made that particular program (rhom.exe)
useless. The C-language version (rhom112.exe) didn't have this problem.
This time i've included the source in Basic for rhom.exe.

1661. RTTY on the WARC bands

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-03-31 00:00:00 UTC
From: algollom@interlog.com
Message-ID: <4jklom$gps@steel.interlog.com>
Source record: 37941

As one who has recently discovered the joys of RTTY, I've
been scouting the various bands for activity in that mode.
I've discovered a fair bit on 80, 40 and 20 (the open bands
these days), but next to nothing on the 30 and 17 meter
WARC bands.

Now I realize that the WARC bands probably don't appeal to
those whose primary interest is contesting. I also guess that
there may be a reluctance by some with limited space who want
to optomize what space they have for antennas for the bands
"where the action is".

This is certainly not to say the WARC bands are dead. Far
from it. There is a fair bit of activity on phone, cw,
packet and the TOR modes, but as I said, little if any on
RTTY.

There's nice open space there just waiting to be filled.
You might be pleasantly surprised by the propagation on
these bands and what you can do with just 50 - 100 watts
and a simple dipole - especially now during the low end
of the solar cycle.

So how about giving it a try, RTTY enthusiasts. Break away
from the crowds and try something new and a little different -
RTTY on the WARC bands.

Hope to see you there.

From: Brian Webb <102670.1206@CompuServe.COM>
Message-ID: <4jkupliem1@mhade.production.compuserve.com>
Source record: 37942
Cross-posted to:
aus.radio.amateur.digital,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,sanet.radio.packet,alt.radio.digital

I own an MFJ1270C packet TNC. I've tried interfacing it with two radios with no luck.

I connected it to an HTX202 HT and I had good receive, but no transmit. I used an MFJ premade cable and a homebrew cable with the same problem.

Yesterday I tried connecting this TNC to a Radio Shack HTX212 mobile radio. Same problem: Good packet reception, but couldn't key my radio (I was doing the CALIBRA K transmit level adjustment procedure).

I removed jumper L as suggested by MFJ and I also removed a 4.7 K ohm resistor that I had hooked in parallel with R140 in my earlier attempt to use my HT.

Any idea what is going on here?

Regards,

Brian Webb, KD6NRP

>purchased the study materials and begun reading tho.
>
>Anyway what I'd like to know is, does there exist any Gateways to the Internet
>via Packet in the Brooklyn New York area or any of the 5 boro's?
>Or is packet more like local BBS's?

I can't help with specific gateway locations. Some exist, but much of
packet messaging still revolves around the paradigm of the BBS.

>What is the average Baud rate? I've seen folks mention 56k but it didn't seem
>to be the norm tho I'd be happy with 14.4k or 28.8k(I use 28.8k modem via land
>line now).

Amateur 56 kb RF modems have existed for 9 years now, but they still
aren't in wide use. Partially that's because up until now they have
only been available as kits, but PacComm now has a W&T unit. Partially
it has been because people have not understood that the modem is also
the radio, and thus isn't as costly as it appears, though a transverter
is needed and those aren't free. And partially because of the chicken
and egg problem. It does little good for you to buy a 56 kb system if
no one else in your area has one. A way around this problem is to
participate in group purchases with other local amateurs.

The step down from 56 kb is a large one in amateur packet. The
next level is 9600 baud. That also has been held back because
the 9600 baud systems aren't plug and play with most voice grade
radios, and many amateurs have been unwilling to do the internal
modifications to their radios to allow 9600 baud to work through
them, or in some cases have radios which are unsuitable for such
modifications.

So the most common amateur packet radio baud remains 1200, and
that's to say the least dismal. And it is worse than it may at
first appear because packet is generally half-duplex, and often
needs relay hops to reach its intended destination. Half-duplex
operation of course increases interactive latency a *lot*, and
each relay hop cuts the effective baud in half due to the store
and forward nature of packet relay. So latency becomes *huge*
and performance can't be compared to operation over telco, even
at the same baud.

You're not going to do much websurfing, unless you have the
patience of Job, when response times to mouse clicks are most

convienently measured in *minutes*. For text only use, like
usenet, 9600 is tolerable, but for websurfing nothing less
than 56 kb is usable. It has a "feel" most similar to using a
28.8 kb modem on a telco line (assuming the number of intervening
relay hops are few). But there's that chicken and egg problem.

>Another thing that perplexes me....Why do the TNC's need RAM for mail boxes?
>Don't they simply route the incoming mail to the connected Computer? Or does
>the RAM act as a Buffer/Spool?

The internal mailbox allows the TNC to receive and hold messages for you
when your computer is turned off, or being used for other tasks. Many
packet operators leave their TNC and radio on all the time, but don't
leave their computer on all the time. Those that do, however, such as
Linux users, or those using one of the flavors of NOS (a TCP/IP program
for DOS machines), don't need or want the mailbox function in the TNC,
and generally leave it disabled, operating the TNC in the so-called
KISS mode instead.

>Also if you could recommend a Basic inexpensive Radio for Packet use that'd
>help. Recomendation of a High Speed TNC would be nice as well.
>I'd like to keep the outlay of funds to under $400-$500 if possible and
>not averse to used equipment.

For around $500, you can put together a 56 kb station. Remember in this
case that the modem *is* also the radio, though a transverter is also
required. The modem is still available in kit form from GRAPES for $250,
and transverters are available used for around $160 (MMT432S, 10 watt),
or as kits from places like Down East Microwave for $155 (though an
external amp may be desired here). You also need a data pump, and
the Ottawa PI2 card is $125. So you're looking at about $535 plus
antenna and miscellaneous bits.

Or you can put together a 9600 baud station for about $500 using
a $200 TNC/9600 baud modem and a 2m voice grade radio for around
$300-$350 (though if low power and 70cm operation are sufficient,
a Tekk KS-900 2 watt data radio can be substituted at about
$140).

Or you can put together a 1200 baud station for about $400 with
a $125 TNC/1200 baud modem and a $300-$350 2m radio (though you
can use a commercial surplus radio for as little as $50 plus
crystals and conversion costs).

As you can see, the cost differential of the various options is
not large, but the performance differences are huge. The only
reason 1200 baud hangs around is that amateurs often ignore the
cost of the radio in their calculations of 1200 baud setups since
they already have a 2m voice radio that can be used, and they
consider that "free". When the cost of the complete station is
totalled, however, the nearly 47 times improvement in throughput
of 56 kb makes it by far the cheapest per bit setup.

>Lastly I know my current Internet provider connects to the Net via Satellite
>is this Doable with a Technician's Licence?

If you mean can you access the same satellite as your ISP with an amateur license, the answer is no. That's commercial common carrier service, not amateur radio service. But if you mean can you use *amateur radio* satellites with packet, the answer is a definite yes. However, these satellites are essentially orbiting BBS systems, not internet access points.

>As you may have noticed I'm pretty GREEN so any help would be appreciated.
>So far I've been reading CQ and Gordon West's No Code Technician study book.

Amateur radio has a lot to offer, but it isn't a substitute for an ISP, at least not yet. If you want to *use* networking, amateur radio offers limited functionality at present, but if you want to learn about, experiment with, and build digital hardware, software, and wireless networks, then amateur radio offers opportunities available nowhere else.

>Aaron KA1VOA
>E-mail direct please.

Hi Aaron.

DFSK is a modulation METHOD, and G3RUH is a coding scheme. The KPC-9612 does
talk to G3RUH modems, both using DFSK. You shouldn't have any problem if they
are properly adjusted.

The software that comes with the KPC-3 is called Pacterm. You might be better off getting something a little more sophisticated, YAPP at the very least. If you want to work the internet gateways, you should get a version of JNOS.

1670. Group GPS Purchase by TAPR (Announcement)

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-01 00:00:00 UTC
From: gjones@teachnet.edb.utexas.edu
Message-ID: <352399.ensmtp@teachnet.edb.utexas.edu>
Source record: 37860

TAPR offers group GPS purchase 4/1/96

TAPR working with Bob Bruninga, WB4APR, will be making a group purchase on
Garmin 20 GPS units.

For full details on the purchase as well as information regarding the unit,
please see the following web page http://www.tapr.org/gps

The price will be:
$165.00 US for members of TAPR
or
$175.00 US for non-members

This kit will include:
* Garmin GPS-20 (MultiTrac8 sensor) engine (1.83" x 2.74" x .45")
The Garmin GPS-20 is similar to the Garmin GPS-45

* RF pig tail with connector for unit
(one end is the MCX male connector
and the other end will be non-connected - see below)

* power/data cable with connector shell and pins
(The connector is a subminiature PCB edge connector
and will need to be built - see below)

* Documentation

TAPR will be taking orders for 50 units, which is the minimum purchase.
Once 50 units have been purchased TAPR will order the Garmin units.
TAPR will deposit money when the units are ordered from Garmin and ship
when the units arrive from Garmin. It is expected that the demand will
be high, thus a short period should be required to receive the 50 orders.

Please note: This is not an enclosed/sealed unit. It is assumed that
the purchasers will be installing the unit in another enclosure for normal
and experimental operations.

No 10% Discount for TAPR Members. Due to the nature of the purchase,
the $165 purchase price for TAPR members represents the membership
discount.

If you would like to order one of these units, you can
e-mail tapr@tapr.org,
phone (817) 383-0000, or
fax (817) 566-2544.

Office Hours: Tuesday - Friday 9am - 12pm, 3pm - 5pm Central Time

These units will be useful with current APRS software and the upcoming TAC (Totally Accurate Clock) kit that Tom Clark, W3IWI, has begun discussing with TAPR to do as a kit in the future. For more on the TAC project check: ftp://aleph.gsfc.nasa.gov/GPS/totally.accurate.clock/

Questions concerning the unit and details on the buy will be handled on the TAPR APRS Special Interest Group list. To subscribe, send e-mail to:
listserv@tapr.org.
In the message type
subscribe aprssig YourFirstName YourLastName.
The server will then send you a message back. Announcements on the status of the shipment will be made to the TAPR APRS SIG and TAPR-BB lists.

Shipping and Handling
---
* Shipping and Handling within the US will be $7.00 US by UPS Ground unless otherwise requested by purchaser.

* International Shipping will need to contact the TAPR office and get a quote on the shipping to your country. TAPR uses International Express Mail, unless the purchaser requires something else.

General Information

All Garmin engines come complete with DGPS input capability (see note below), PPS timing output and lithium 3V battery on board.

MultiTrac8: Tracks and uses up to 8 satellites for accurate, reliable GPS data at an incredibly low 1 watt power consumption. Unit has and a real time clock, PPS timing and nonvolatile memory right on the board.

Footprint (1.83" x 2.74" x .45")

Architecture Patented MultiTrac8

Time to first fix
reacquisition < 2 sec
warm 20 sec
cold 2 min
sky search 15 min
update rate 1 sec continuous

Dynamics
velocity 999 knots
acceleration 3 g
jerk 20 m/s^3

Datums 102 predefined, 1 user defined

Electrical
input voltage 5.0V DC +- 5% regulated
(a suitable regulator should be used)
power consumption 0.8 watts
backup on board 3V lithium (10 year lifetime)

sensitivity -166 dBW

Connector
antenna 50 ohm MCX female connector for active
(5V DC @ 15ma) or passive antenna
power/data single row, right angle 12 pin male

Physical
configuration 1 integrated board engine
size 1.83"W X 2.75"L X 0.45"H
weight 1.1 oz
op temp -30 deg C - 80 deg C
(remove Li battery for extended usage above 80 deg C)
storage temp -40 deg C - 85 deg C

Interface
compatibility 2 RS-232 serial ports
data rate User selectable baud rate
1200/2400(tx only)/4800/9600
format NMEA 0183 v.2.0, ASCII
inputs Initial position, date and time (not required),
2D/3D & earth datum command,
RTCM-104 v.2.0 differential
outputs Position, velocity & time, receiver and
satellite stautus, geometry and error estimates
timing output Timing output with +- 1 microsecond accuracy

Frequently Asked Questions
---

* Any altitude limitations?
The GPS engines will deactivate themselves above 50,000 feet.

* The Garmins only send out final solutions (NMEA sentences).
There is no other data available from them (including preprocessing data).

* The Multitrak8 has only one channel, but is multiplexed.

* The Multitrak8 can accept DGPS signals (see note below).

* Antenna options (which can be purchased directly from Garmin if required)
include:
- mag mount
- flange mount (bolt to a car)
- trunk clip
- suction cup mounted

* The unit has true time clocks, PPS timing, and nonvolatile memory
on board.

* The interface is NMEA 0183 (TTL levels) and RS232 (+ and - 15 volts)

* The unit can be powered by AA batteries.
Batteries or external supplies will require a suitable power regulator.

* The unit only gives NMEA sentences as output, no extraction
of RTCM-104 data.

* There's no problem with the antenna being close to the boards.
All sensitive components are shielded.

* The unit has a LNAs and you can use passive antennas.
You need to keep the antenna runs short however.

* The antenna is attached with a MCX connector, which is a friction
lock connector. A male MCX connector with short RF cable is included
in the kit purchase.

* There's a header for connecting the data cables.
A connector and cable will be included in the kit (it will need
to be soldered). The connector is a subminiature PCB edge connector.
This is not the same connector as used with many hand-held units.

* You cannot adjust the intervals that the boards outputs data.
However, you can adjust their baud rate. At 4800 the boards repeat
data every 2 seconds. At 9600 baud, data is repeated every 1 second.

* The boards do adjust for leap seconds (via the satellites).

* For DGPS, since these are just the boards, you can't use the Garmin DGPS
receivers. The Garmin units get tuning instructions from the GPS keyboard
(which are not on the boards). To receive DGPS signals, you'll need a
tunable beacon receiver. Correction signals are sent in through the
data in cable (just like the handhelds).

I measure mine by ear. If I don't hear static, and my swept filter display
doesn't show verticle lines, then that's my noise floor.

> Then, how many amateurs have equipment to measure noise floor and how many
> amateurs have equipment that can operate at the noise floor ?
>
> If not, where do they operate in respect to the noise floor ?

There is one major problem that the SS community hasn't come to terms with;
that is, the problem of operating next to a weak signal enthusiast. I will
guarantee that you will stop all his fun. The noise floor only applies to
distant stations. Those receivers in the near field will be swamped by an
SS transmission. So swamped that direction finder equipment can track them
down unsynchronized.

But I don't think we need a law. The government should allow us bands of
use, and if the amateurs can't agree, then the bands should be given to
someone who can. Laws are for lawyers. I don't think we need either.

>SS transmission. So swamped that direction finder equipment can track them
>down unsynchronized.

And the inverse can be true too if a SS station is operating next door
to a QRO contester. Due to the need for a wide open front end to pass
the band over which the spreading is occurring, the radio is subject
to overload and IMD problems from strong nearby signals. This sort of
problem is not unique, and is pretty much the rule with today's Japanese
radios, even for narrowband operators.

At least there is a solution to the narrowband weak signal enthusiast's
problem. The SS station can use a spreading sequence that stays out of
the weak signal segment of the band. Solving the inverse problem requires
some good RF engineering, but it can be done too. A sharp notch filter
can be applied to the SS receiver front end to knock down the offending
QRO signal while still allowing passage of most of the SS chips, which
of course are on other frequencies. The PAR filter is a trivial example
of the concept, applied to the pager crud infesting wide receive coverage
Japanese radios.

In article <315DD042.40B1@telepath.com>, ssampson@telepath.com says...

>Can't be done until the AX.25 VxD driver gets built. Best bet is to

Actually it can. Using ETHERAX25 and WINPKT you are able to interface Netscape etc over packet. I have some problems with Etherax25 routing through an X1J node (or more to the point _not_ routing) but apart from that it appears to be working ok. The source etc is available for it and so no doubt some clever person could modify it to have a decent routing table etc...

If anyone's interested it was available from the TAPR ftp site if I remember correctly - last time I got using one of the various search engines.

Finally I'd be interested to hear what anyone else is using for their TCPIP networking. We are looking at changing the local system here from FBB to JNOS and I want to try and get people using Netscape/Peagasus/Free Agent etc over packet so it would be good to find out how others have found such systems.

Cheers de Luke (ZL2JF).

1677. APRS and 50 MHz Propagation

Hello,

In this months CQ I noticed that many packet modem ad also contained
the caption "Now does GPS"!

As a SWL-er with an interest in RTTY and other digital modes I was
wondering what this GPS does in the context of packet modems.

Would it be possible to retrieve your exact location by using one of
the modems, the correct receiver (Scanner radio?) and the correct
antenna, and probably a piece of software?

This would be great. Please could you let me know what they mean with
"Does GPS" and waht else I would need to create my own little GPS
receiver.

>>I would rather not add anything onto the SX64; the beauty of the
>>machine is that it is self-contained.

>What are the main differences between an SX64 and a standard C64?

(1) The SX-64 does not have a Casette port.
(2) The LOAD/SAVE commands default to device 8 (internal disk drive).
(3) The main ROM that tells it who it is is slightly different.
To use a cassette port version of Digicom with an SX-64, you
have to install the "missing" pieces, and switch ROMs with a C-64.

73 es GM from Jeff
PS, there is a USER PORT version of Digicom floating around, but it
is truely terrible compared to what you'd expect from the Cassette
versions.

From: w6go@netcom.com
Message-ID: <w6goDp7G1p.50s@netcom.com>
Source record: 37872

I recently tracked down a problem in an X1J node to a 512K EPROM I programmed over two years ago. I compared the source file with the EPROM and found that the last two bytes in each page became FFh. These are locations 7FFE,7FFF,FFFE and FFFF. I was able to re-write the program into this EPROM, just for grins, and the four locations again agree with the source.

I don't intend to use this EPROM again. However, I would be interested in hearing of similar experiences with EPROMS loosing their program. The chip in question had a paper label over the window and has been installed in a TNC most of it's "life".

From: dorsil@mhv.net
Message-ID: <4jq0r0$q3f@news.mhv.net>
Source record: 37874

Hello and thanks for reading. Recently, I just purchased an APRS Adapter Cable to use with my PK-12 and Magellan Meridian GPS. I also ordered a power/data cable for my GPS shortly after the cable has arrived, and I have not received that yet. I am just concerned whether or not this cable will plug into the power cord. On the adapter cable there is a small cable, and on the end where the GPS is supposed to plug in, there is a small headphone type jack. Does anyone know if this is a standard hookup for all GPS's? Will I have to cut off the end and wire it into the GPS manually?

Please get back to me as soon as you can.. Any info can help!

Thanks a lot!

> TNC or what? Just curious!

"Wild Nodes" are a Kantronics construct. A "wild" node allows connections to
any SSID of the "main" node callsign (CANOD, CANOD-6, CANOD-11, etc) whereas
a "standard" KA-Node allows connects only to the primary SSID (CANOD).

The advantage of this is that a user can maintain more than one path through
a given node (connect to a station thru CANOD and another station thru CANOD-2,
for example).

David C. Brown N2RJT (dcb@vectorbd.vivanet.COM) wrote:
: I saw a message in the digest mentioning that someone had been trying
: MACA, and there was something called MACAW? Any pointers to more
: information? I'm interested in the MACA concept, and I would like to
: know of anyone who has tried it or similar ideas.

MACAW added a couple extra packets. The two articles I have that deal with extensions to MACA are:

"MACAW: A Media Access Protocol for Wireless LAN's", Vaduvar Bharghavan, et. al., ACM SIGCOMM-94, pp. 212-225.

"Floor Acquisition Multiple Access (FAMA) for Packet-Radio Networks", Fullmer and Garcia-Luna-Aceves, ACM SIGCOMM-95, pp. 262-273.

FAMA dealt more with CDMA type operations so I will just go through MACAW here.

The idea of MACAW was to correct several perceived problems in MACA.

First, the current value of the backoff timer is included in each packet. The backoff timer is doubled after every collision and reduced after every successful RTS/CTS exchange. The reason is that with exponential backoff, a few nodes can go into "runaway" backoff while a couple others dominate the channel with their significantly smaller backoff timers. The backoff timer on a packet is copied into one's own backoff timer when you see it so that all nodes achieve the same backoff timing. This amounts to a simple method for sharing congestion information.

Also, to avoid wild oscillations, the new backoff algorithm is as follows. There is a set minimum and maximum backoff time. After every packet collision, the backoff timer is multiplied by 1.5. After each successful transfer, it is decreased by 1 (within limits of the maximum and minimum times). The idea is that the algorithm will react quickly to traffic with multiplicative increases but that the decrease is gentler.

I mentioned the problem of power control and whether it is better to take one big hop with higher power or several smaller hops in a packet network. My idea is that if you can use the backoff timers as congestion control, those backoff timers will function as a measure of "congestion" on the network. So sum the backoff timers along the route (with some obvious filtering here) and you have a measure of lag for each available route..then a conventional shortest path first algorithm will work fine. Also, nodes with "noisy" links will work by this same sort of logic (measuring throughput due to corrupted packets).

Another problem is that fairness can be a problem in allocating time around a given node (the bottleneck). In the MACAW situation, cells were small so

a different backoff timer for each receiver was maintained. This should probably be modified for packet radio to represent each possible radio link.

The MACAW algorithm also extended the packet exchange from RTS-CTS-DATA to RTS-CTS-DS-DATA-ACK.

The ACK is sent from the receiver immediately after the data packet to support reliable communications via ARQ. Packets are rescheduled if no ACK is received. ACK's can also be sent in response to an RTS to "short-circuit" things (since the packet was already received).

The DS is for "data send". This is used for this situation:

R1<--S1 S2-->R2

In this case, S1 and S2 want to send some data. The point of the CTS packet is to suppress congestion at the receiver. But in bidirectional transmissions, the sender also has to be able to hear the CTS so another station has to be quiet after hearing the RTS. But in MACA, carrier sensing was not assumed so a third station (say S2 in this case) doesn't know if the sender (S1) successfully received a CTS or not. So just before sending out the data, the sending station should send a DS (data send). Station S2 (which was out of range of the CTS) should wait for a DS. If it doesn't receive a DS, it is free to initiate it's own RTS.

The next problem is the reverse of the above situation, where the senders can't hear each other but the receivers can. In this case, one sender keeps getting through just fine after getting an initial RTS out followed by a long data packet but the other sender keeps trying but is blocked by the data packet. As a result, its backoff timer just keeps climbing longer and longer because it can't know about the congestion problem surrounding the receivers.

So in this case, when a station receives an RTS but it can't respond due to deferral to another station (the second receiver), it waits for traffic to clear and then immediately sends an "RRTS" (request for request to send) to the station that sent the original RTS to which the original station immediately responds with an RTS. Stations receiving an "RRTS" should wait for 2 packet times so that an RTS/CTS pair can make it through.

A different problem is this case:

S1-->R1 S2-->R2

In this case, most of the time when S1 tries to send to R1, R1 can't hear it because S2 is transmitting data. MACAW has no good answer to this problem (how to communicate the situation back to S1).

I like runnig TNOS under LINUX. TNOS does compile under Linux using the
GCC compiler. You can do AX.25 PBBS forwarding, FBB style compression
forwarding, etc. Users that connect see something similar to a AX.25 PBBS.
Users connecting directly to the LINUX kernel may not like with they find.
Since TNOS runs under Linux, you get both TNOS and the Linux Multitasking
stuff. You can run scrips on Linux that montior TNOS and restart it when
needed. The combination of LINUX and TNOS are much more stable that xNOS
under DOS or Windows. To each his own.

KAWIN NEWS

KaWin 6.37 is ready for download! Minor changes to the help file too.

The big news in version 6.37 will be a big yawn to registered KaWin users, but I'm hoping it will lighten the flames that periodically decorate my screen. ;-)

It starts with a new, kinder and gentler, nag meter. The new meter does not start running until the first time data is "sent" from KaWin. That means a prospective user can monitor indefinitely and explore the menus and features without the anxiety of that nasty old nag meter. Once it starts running, the new nag meter is purely time based, and visible, right at the top of the screen.

So, if you know someone who just couldn't get past the old nag meter to thoroughly evaluate KaWin, now's the time to try again.

Another assist for new users is an operator alert at program exit if a TNC that was opened in terminal mode is about to be closed in host mode. Host mode close remains the default - and, for good reason - but, TNC users who are new to host mode have been righteously incensed when their TNC fails to respond to their old terminal mode program after exiting from KaWin. This new feature should help.

Finally, KaWin has long been able to preserve the HF mode of a Kam from session to session as long as the Kam is not powered off, or if the Kam was closed in terminal mode. Now, that same capability has been extended to Host Mode close - even if the Kam is powered off between sessions.

All currently reported bugs are fixed in 6.37.

You're probably not doing anything wrong. Propogation or equipment
failure can cause nodes to be listed when they cannot be connected to.
Once nodes are heard, they stay on the nodes list for a period of time,
during which changes can cause them to no longer be heard or connected
to. You didn't say the type of node, so I'm assuming a Net/Rom type node.
If so, you can get a rough idea of how successful a connect might be by
looking at the quality numbers. They are explained in an article at:

http://www.idir.net/~medcalf/ztx/pathqual.html

This is typical behaviour for ham radio networking. Don't be surprised,
it's caused by a combination of low-speed links (1200 bps nearly
everywhere), extremely poor network engineering (hidden terminals,
simplex channels, etc), and a general lack of understanding among node
operators about how to do fixed routing, set parameters, and finally,
a "me first, to Hell with the hindmost" attitude of channel contention.

You're not doing anything wrong; that just the way it is. Use the
telephone instead.

>So if anybody has done something related, I would like to know how.

There has been a lot of activity in the last 20 years of computers over radio by the Ham Radio (amateur radio) operators worldwide. In the early '80s RTTY (radio teletype) was a popular signalling scheme (standard FSK like modems use). Later in the '80s and into the '90s packet-ham ("packet" bursts) became popular.

From your posting I think you want to dig up information on the RTTY stuff. You can look into one of the following USENET groups for more information like this -- I cross-posted this message to the digital group and set follow-ups to go there:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.policy
rec.radio.amateur.space
rec.radio.amateur.misc
rec.radio.broadcasting
alt.radio.networks.npr: 1-7159

P.S. I still have a RTTY receiver running at home collecting various wireservices and stuff, and I used to run a packet-ham station tied into a full bulletin-board system.

George:

No it can't. The PK64 has essentially the terminal program
and demodulation program burned into ROM that is loaded into the C64.
AFAIK, executables for the C64 can't run on INTEL platforms.

Hi all,

I have a little newsserver set up on my host dg1kjd-svr.ampr.org here in germany. I got all german and europe ampr.* newsgroups as well as some non-ampr groups as linux.* and comp.* . I'd like to exchange some groups with somebody in the US or VK/NZ (just4fun) via NNTP. Is somebody interested in that? Do you even have a ampr.* news network?

Really. I agree with Brian. What blows me away is how satisfied
everyone (at least here in N.E.) seems to be with this situation. Is
it just ignorance? Or do they just like sitting around waiting and
waiting and waiting....

I spent quite a bit of time pitching to the local coordination
council the idea of setting aside areas on each band for full duplex
packet repeaters. This idea does not resolve the point to point
linking (so called 'backbone') problems, but it is the ONLY way we
presently have of making functional user frequencies. You should have
HEARD the objections. Even 'so called' packet node ops thought there
was no place for packet on the 'voice' segments of 440 or 220 or 146
mhz bands. Hell, even the local ARRL rep pooh-poohed the idea.

I guess maybe it's ignorance....

Might be possible - if you're a really skilled hardware hacker.
Otherwise, certainly not practical - and there's no sofware for an IBM
to use it.

>will I need with or without GPS?

It will depend on how much precision you need, and on how much
latency you can tolerate. As you may know, the "digital proportional"
control systems for RC are really analog systems with a varying pulse
position as the control element. The pulse doesn't move in steps, it
is infinitely variable in position (within its timing window), so
you get smooth control. With pure digital words, control becomes a
matter of steps, with the step size depending on the number of bits
you assign to each data word. 8-bit words only give you 255 steps,
and that may be too coarse for some flight controls. You may need
to use 16-bit words.

Latency is the other side of the coin. The larger the control frame,
the faster you have to send it for a given latency. Latency is the
time between commanding an action and the servos executing the action.
A 5 channel digital proportional system has a latency of about 10 mS.
At 1200 baud, and with 16 bit words, a 5 channel digital system would
have a latency of about 100 mS if no error control or acknowledgements
are included. Each additional channel would add another 13.3 mS to latency.
You really want to keep latency down or the controls will become "rubbery".
I'd say 50 mS would be the maximum tolerable latency. So you need to up
the baud to something faster, like 9600. That'll bring 5 channel latency
down to 12.5 mS, which is tolerable. Adding more channels, however, still
ups latency, about 1.67 mS per additional channel.

Now this is for a one-way system with no error control or acknowledgements.
If you want two-way action in packet fashion, other factors come into play.
You have to figure in Txd to include radio switching from transmit to receive
and vice versa, framing flags, control bits for the packet, etc. And you
now have to look at a latency that includes both a command and a response
packet because you won't be able to send a new control packet until a
response packet is successfully received. This will at least double
latency, so again you need faster equipment and faster baud. With 1200
baud packet, latency could be as great as 7 seconds. That would be a
disaster.

I think that if you want to use packet technique, you'll need two independent radio channels, one for uplinking commands, and the other for downlinking telemetry. I'd operate in connectionless mode, IE UI frames, to avoid ACK latency, and I'd use at least 9600 baud for the uplink channel. Faster would be better, with 56 kb probably making a pretty nice system. The GRAPES 56 kb RF modem will operate full duplex, but you'll also have to duplex the RF of the transmit and receive converters. If you do that crossband, you won't need a heavy duplexer.

>Users connecting directly to the LINUX kernel may not like with they find.

They'll find whatever listener process you have hung on the port. It could
be sh, in which case they'll get the familiar $, or it could be a unix
menu system, a unix bbs, or any other unix program you want them to be
able to run. And many users can log in at once since a duplicate process
will be spawned for each of them.

If you just want to mimic DOS packet, the only thing you buy by doing
it under Linux is robustness, and the ability to use the machine locally
for other tasks while it does packet. Now that isn't bad, but it's the
same old tired paradigm that packet radio has been stuck in for too long.
Giving your users some real applications to use (like Doom) might make
them interested in faster packet modems. :-)

Hallo there!

I'm completely new to this (actually, it is the 1st time I read
this newsgroup), and I haven't got a radio (yet? who knows...).

Anyway, I have used a C64 emulator on my previous computer.
It could run ANYTHING! It emulated the CPU, the video card,
the sound chip, the tape drive...
It used much of the CPU power of the REAL
machine he was hosted on (in my case, a 486/66).

So the problem would be transferring the PK64 (what is it?) ROM
in the PC memory...

If you are REALLY interested, I could tell you where to find
the C64 emulator.

All the best,

Massimiliano

I posted this to the tnos helplist, but no one seems to reply, except Sergio..

Anyways, the examples I've seen of making a PPP interface under tnos involve signing on with username and password.

My service (as I expect most will be) uses PAP to authenticate, and so far I've not been successful in getting the interface up and running.

Does anyone have any experience with it? I'm running tnos under linux.

Hi:

I can only address the GPS portion of your question.
If you send NMEA ASCII data, each line of data will be less than 80 characters.
typically this data is sent once per second. A small amount of data.

If you send binary pseudorange data including carrier phase for almost real time postprocessing on the ground you will need about N times more (N being the number of satelites that your receiver can track. This also requires some horsepower in the computer on the ground.

Have Fun,
Brooke

Share your experiences and knowledge about rural education and
telecommunications in Africa.

I am a doctoral student in the International Education department at New
York University researching the role of telecommunications
(particularly, though not exclusively, low-tech telecom. such as packet
radio) in rural education in Africa. At the moment I'm doing a broad
survey of this issue.

What I'm especially looking for:
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

The opportunity to ask people specific questions about personal experiences
using telecommunications in rural education.

Leads to information comparing governmental or organizational policies with
how those policies play out in reality.

I will gladly share the result of this work with any who volunteer to
share their knowledge and experience. Support education; help me out!

Thanks Hans, for all your comments.

And indeed you are right. I should have left off the word "exclusive." No mode has exclusive frequencies except CW in the cases you cite. The truth is that CW is the only mode permitted on all frequencies of all bands. CW gets the favored treatment. That's what I was trying to say. My point is stronger this way.

Thanks for pointing this out.

Not true in the UK - my licence allows me to use virtually any mode on
any part of any band. What keeps things orderly is the band plan, which
is voluntary here. CW gets no particular special treatment.

Further to that, when the "wild node" is on, any connection attempt to an unallocated SSID is automatically routed to the node. If your PBBS is on -1, it will still operate as such but anything to -6, if it's not already assigned to a function, or any other non-assigned SSID will go to the KA Node. Mainly useful in eliminating wasted packets from people trying to connect to nonexistent callsigns or permutations thereof.

Hello -
I will be setting up a portable hf station near Wateford california on
April 18th, and
19th in order to test G-tor with a military NVIS antenna system.

If you have an HF data station located within 400 miles of the
Modesto/Waterford, California area I would like to hear from you!!..

My station will consist of the following:
Sunair military HF SSB radio model GSB900DX running 50 watts
into a military NVIS antenna model AS2259/GR that has also been modified
to allow better performance on the 1.6 to 4 MHz segment.

The station will be on generator power and I also plan to leave it up and
running in an un-attended
mode on the 80 meter band with a mailbox enabled.

If you are interested in running NVIS tests with me during this time
period, please e-mail me

Sincerely,

Patricia Gibbons <wa6ube@aol.com>

Hi all, I've been doing some work here setting up a system ready to come on-stream for our local packet users. Currently we are using FBB @1200bps but I'm hoping to get some users to migrate to NOS & 9k6....

In preparation for this I have been trying out Etherax25 which seems to work fine direct into a Nos box but there are problems for anyone who is out of site of the BBS and has to use the local digipeater (which runs X1J rel 2).

What happens is that if one attempts an FTP session to, lets say, 44.147.200.60 who is out of hearing range X1J (which we can hear) will reply to an ARP request with that stations callsign. Now that's fine but we need to connect to them through the X1J node - however what happens is that Etherax25 attempts a direct connect every time :-(

I've tried setting the X1J node as the gateway in Winsock but this hasn't worked either.

It seems to me that there are two possible solutions (a) have a decent routing table that can be pre-configured for etherax25 (b) somehow set up X1J to give it's own IP# & callsign as the system to connect to when it rx's an ARP request for a station it know's about. It may already do this but so far I've not figured out how :-(Presently I have manually set the IP# & callsigns in the ARP table and the route table to no avail...

So the question is - has anyone struck this before &/or do you have any suggestions for me????

Thanks in advance, de Luke ZL2JF.

A good undergraduate level text on digitial communications is
by Haykin. A good graduate level text is Digital Communications
by Proakis.

Most IEEE papers (such as in IEEE Transactions on Comm. or IEEE
Journal on Selected Areas in Comm.) describe specific techniques
that are being researched. A textbook is a better place to get
started.

Hi Chris...the venerable Mstr II is a great rig and will work well
in Packet service. If you want to run it at 9600, try loading the
IF filter a but to widen it out a bit, and take your audio right off
the discriminator chip output. I'd use a 20-25 amp supply, unless
you've got plans of running it at full output. Nice thing about the
GE's is they can be moved much further in frequency than the
Micors and Mitreks...but on the other hand, the Mitreks make a
very fine 9600 bd radio. The books are out there and available,
and GE is probably the best source of them as most who have
them wont let go.

good luck

In the event of war, without SA capability, does this mean that the
system is turned off? (Hopefully there won't be a war, but...)
What do all those GPS users do then? If the SA will be elminited, will
there still be a need for DGPS? I understand DGPS was developed to
overcome the problems with SA in such areas as harbor navigation.

HI HI! It's just a harmless ham habit, Jim! Also it's a form of
useful "inside" camaraderie.
Why say "ham?" Simply say, "radio amateur."

Every group has to have its jargon. My wife, a non-ham, occasionally
ribs me about it when I'm chatting on the air. QSL?

There are other liberal interpretations of these codes too. QSL
might mean, "Get my drift?"

It's easier to say hi hi than to laugh. What "we" really mean is
that "we" am smiling, hi. :)

You really didn't mean you are going to leave the hobby did you?
Guess not. You ended with "73"... whew!

Has anyone had any experince with the Alinco DR-150 radio at 9600 bps?

I use one with a Kantronics KAM+ at 1200 bps now and it's fine at that
data rate. Before I spend a couple of hundred bucks for a higher speed
TNC I'd like to know if anyone else has used one at the higher speed.
Alinco's literature and the users manual both promote it as 9600 bps ready.

As I understand it, the long phase-out period planned for SA is to allow the military to deploy adequate jamming techniques.

I've also heard that SA was turned off for Desert Storm, Haiti, etc.

DGPS will certainly continue to be necessary for high precision users such as aircraft landing, and it seems that the White House decision will allow the FAA to go ahead with its satellite-based wide area augmentation system of DGPS for civilian (aircraft) users.

When will GPS/GLONASS dual system receivers appear in the consumer market? That would likely speed the day when SA goes away. I've been expecting some far-Eastern manufacturer to come out with such a box at a low price to sweep the market.

I may be wrong, but as far as I can recall, it all works just fine as run in the DOS VDM session mode in OS/2. As I recall, the only problem is that virtually all of these TNC programs are polling type programs. Therefore, they all hog the CPU for time slicing so badly that they become the ONLY effectiuve program you can run in the OS/2 box that makes use of the comm ports, when you use them.

That means, if you ae content to run just this program as your only comm program, you will never likely notice the difference in the performance of the whole box.

If you suddenly get brave and start to think about running more than one of these polling programs at a time in your nice OS/2 box, you will get badly dissappointed in the box and TNC's in DOS VDM sessions.

The onlu REAL solution to all this is SIO by Ray Gwinn, if you decide to stay with DOS VDM stuff, or better still SIO and the OS/2 specific multi-threaded TNC programs from HV9CVV, I think a couple others from Europe and PAKET6, I read here a while back.

They are what you need for multi-threaded work in OS/2.

1768. Amp Supply - HELP

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-06 00:00:00 UTC
From: Rick Johnson <rick@halls.com>
Message-ID: <3166F1D1.207F@halls.com>
Source record: 37758

HELP !
I have found an Amplifier within some auction stuff and I need some
information.
It is an Amp Supply LK 800 ISM. The tech guys at Amateur Elect Supply
in Cleveland
helped a lot but I need to know some more details. It has WARC bands
indicated on the
band switch, so it's not ancient. Does anyone know ---
What minimum power to drive ?
Does anyone have / have source for a schematic ? Owner's Manual ?
Know amp draw @ 220v. ?
Is Amp Supply deceased ? I know it used to be Dentron in NC.

Any help is appreciated .

You need to get "ethrax25.zip". Try;

ftp://ftp.tapr.org/tapr/software_lib/tcpip/ethrax25.zip

I'm on a MAC, so I can't be of much help on this.

I have used my 736R for several years now on packet.
I originally used a MFJ - both the straight TNC and then a
multimode. Currently I am running a KPC3 from Kantronics.
I run via the data jack on the back of the 736R and all works well.
There is a mod for the 736R for 9600 rate but have not done that so far

>and GE is probably the best source of them as most who have
>them wont let go.

Be aware that GE radios use *phase modulation* and thus aren't
suitable for 9600 baud operation without modification. You can
modify the Channel Guard input (which is direct FM) to get sufficient
deviation and bandwidth for proper 9600 baud operation. This requires
modifications to the individual Icoms.

Merely loading the filters is unlikely to give you a flat phase
passband, and filter replacement is a better option. Unfortunately,
finding wider filters for the GE IF (11.2 MHz) is not easy. It may
be necessary to convert to a 10.7 MHz IF to find suitable filters.
This is fairly trivial, but does require recalculating the channel
element frequencies. You *can* just bypass the first IF filter,
replace it with a coupling capacitor, but of course adjacent channel
selectivity suffers greatly. This should only be done at a low RF site.

Also be aware that the demodulator is not a typical discriminator.
The output at U602 pin 1 has a *DC offset* and doesn't give the
typical discriminator zero when you are on channel. This has
obvious implications for coupling the signal out of the receiver,
and for netting a receiver on channel.

While you can get these radios to "work" on 9600 with a couple of
simple kludges, the BER will be disappointing and you'll find yourself
running much more power than necessary in order to "push signals through".
It's better to modify the radios right. Some of this holds for the
Mitrek too, in particular the IF filter issue.

The reason that it is worth the trouble to modify these radios is,
aside from the obvious cost factor, these radios have great front
ends, and don't suffer from the IMD and overload so common with
amateur grade receivers. Of course they will work "as is" for
1200 baud packet and do a fine job for that.

I have recently come to believe that you may be better off just
taking the RF front end out of the GE and putting it in front
of a more suitable IF strip rather than kludging around trying
to convert the existing IF to work properly at 9600 baud. There
are several single chip IF subsystems that may be more suitable.
And it may be better to just use the PA and replace the exciter
with a more suitable one as well if 9600 baud operation is intended.
There are also single chip solutions here.

The reason I say "may" is that repackaging the resulting radio is
a non-trivial issue. We've been experimenting with that here for
another purpose, and there are gremlins due to unintended stray
paths which may make the system unstable or degrade its performance
potential. We've achieved a couple of stable systems with excellent
performance, but more by guess than by deliberate intention. More
work is needed in this area to make it fully reproducible.

I have found node-hopping to be very frustrating also, requiring a lot of
waiting and waiting and waiting and disconnects with varying degrees of
success.

Talking to a node manager, I found that although a particular node is on
the node list, it might not be available due to quality of reception and
other factors.

Also I found the best success off of "Prime Time" i.e., very early in the
morning or very late at night. During prime time, I have seen as many as
12 or more folks trying to use a node and it just bogs down when several
are requesting a list of bulletins or files. You can expect lots of
collisions and disconnects when this occurs.

On the Plus side I primarily use packet for the DX Packet Cluster which is
very efficient as most folks just listen waiting for that rare spot.During
a contest it too can bog down with frequent disconnects.

Good Packeting

From: bsmith@msn.com
Message-ID: <4k7fha$q97@news.internetmci.com>
Source record: 37767
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.digital.misc

OK, and greetings. Trying to put together an automated SAT sattion.
Have had the DSP-93 for about 9 months now and trying to get things
going. Have the PACCOMM TNC and thought loading PSK and FSP modems
would be a lot easier than it seems to be.

Also, at least on my DX cluster @ 9600 - I seem to be getting much
better throughput on my MFJ/G3RUH combo then on the DSP-93 using the
FSK18 modem. I have the thing tuned for 1Vpp input so I think it is
tuned as well as possible. Using an ICOM 820H BTW.

Here's my question(s):
Should I get a DSP2232?
Will the TAPR TNC do a better job of Swapping modems and loading OBJs.
How does the 2232 compare to the DSP-93 or MFJ-G3RUH interms of
performance - don't want to shell out a grand and go backwards.

Thanks in advance for any advice or ideas you may have.

I have tried both using the DOS vdm and booting a DOS disk image. I can't seem to
get the Baycom software to receive consistently (it claims to be receiving
packets but nothing is displayed).
I am using SIO com driver (ver. 1.53). I have tried altering its parameters
and played with OS/2 timeslice parameters but the problem persists.
I emailed the Baycom people but they are not producing OS/2 software
for the Baycom modem (not enough OS/2 users, too hard to write
OS/2 software, etc. they claim).

Is there OS/2 packet software that supports the Baycom modem?

You might put up a repeater (digital). That and the users running TEKK's
would be a nice change.

> In preparation for this I have been trying out Etherax25 which seems to
> work fine direct into a Nos box but there are problems for anyone who is

EtherAX25 doesn't digipeat. You would have to modify it. Best choice is
to burn another ROM for the X-1 node. This is too easy, so just do it :-)

The rest of your message is all a result of the X-1 version. Upgrade both
the BBS and the node.

When SA is turned off, civilian receivers work better. The thing to remember, however, is that as long as the satellites are capable of SA, and they will be until the current batch is retired at least, the option to turn SA back on will always be present. Therefore, DGPS is still the smart choice for anyone depending on a high degree of positional accuracy from GPS. DGPS is also capable of higher accuracy than even non-SA ordinary civilian GPS. I don't see it going away.

Gary,
Saw your' post here and thought I'd try and drop you a line.
Not real sure if I've got all the server stuff set up right, reply and
let me know if ya get it.

We use 1/2" hard line from the cable company all the time. As a
matter of fact it's on three different repeater sites, with no
problems. The beauty of the 1/2" line for us is that it is little
problem to make a connector out of common plumbing and radio
connectors that assure very little impedence "bump" at the change over
from the hardline to the jumper that actually feeds devices. Also, I
have a piece of this up at the city fire station and the "coat hanger"
ground plane is just poking up off the end of it!
If you are interested and have questions reply to :

Many Q signals have meanings defined by treaty or other international agreement. They have the same meaning in every language, which is a help if you don't speak the language of the person with whom you are in contact. Dick's response is fine, too.

Anyone know of a 2 meter DX packet cluster node accessible from North Central Pennsylvania? I've been looking for one I can hit from Tioga, PA, about 25 miles south of Corning NY but so far no luck. Thanks for any info from the packet community.

I'm currently negotiating with a well known software firm to develop a serial port, and DMA card based drivers. The goal is to have a product by Christmas.

It's about a one man-year project. I'm also looking for venture capital. If you know of large investors, I am interested.

My needs are based around a 1.5 Mbps through 1.2 kbps, through multiple ports and devices.

Hello,

paulie@pryan.data.binghamton.edu (Paul Bobby) wrote :

> Where can I find information about PacketCluster?

do you really need this software ? You'd rather consider testing Dx-Net (from F5MZN) or Clusse (made in Finland). These softwares are free, and have good performances. In addition, they keep improving.

The latest versions run quite well with PC/FlexNet. This means you can have a reliable digipeater and a dx-cluster on the same computer (it works fine on my 386DX25 2 Mb) ! What else do we need ? :-)

Replying to a message of Tapio Sokura to All:

I remember once having seen a non-connected packetcluster-client.
It just read the data on the frequency and listed that on the screen.
Don't know the name anymore sri.
I recall something: it was a swiss ham who wrote it.

>> On the Plus side I primarily use packet for the DX Packet Cluster which
>> is very efficient as most folks just listen waiting for that rare
>> spot.During a contest it too can bog down with frequent disconnects.

TS> I was wondering.. has anyone made any software that allows you to
TS> monitor PacketCluster dx-spots, announcements and similar things? So
TS> that you don't need to be connected to the node. The common way is
TS> very unefficient, because the cluster sends exactly same dx
TS> information to all stations. And then all the stations have to
TS> confirm that packet. It would be much simpler using UI frames by the
TS> box, sending all info two or three times to ensure that everyone has
TS> got the info. And those who still didn't get the info could send a
TS> sync packet to the cluster, like with FBB unprotos.

TS> Now you cluster-writers, develop some common protocol for this
TS> UI-frame dx-spotting so some other people can write terminal programs
TS> that work with it! With this type of system tens of users could use
TS> the same 1200bps radioport easily..

Greetings, Aart!

1800. 9600 baud ready radios, What is good?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-08 00:00:00 UTC
From: hheidt@erols.com
Message-ID: <4k9l6h$5o@news5.erols.com>
Source record: 37782

I am interested in buying a 2 m or 2 m / 70 cm radio that supports both voice and 9600 baud packet but I heard that most packet ready radios do not perform well. Does any one have any recommendations?

Also, has any one used the Yasesu FT-8500 dual-bander for packet?

Thanks,

Hank N4AFL

Then came the term VELOCITY FACTOR. Where velocity factor, "v", is
expressed as a percentage by :

v = 100c' / c

where c' represents the speed of propogation in a particular
substance, and c is the speed of light in a perfect vacuum. Both c'
and c must be specified in the same units. -Amateur Radio Encyclopedia

oh my, you mean it doesn't handle digipuking? Thank God. Look the best thing you can do for your buddy that can't 'hear' the machine is take his packet radio out into the back yard and beat it with a sledge hammer. That is MUCH better than digipuking.

>It seems to me that there are two possible solutions
>
This is one solution. Put up a digital repeater (not a 'node' or a simplex bandwidth waster) that everyone can hear and tell your buddy that is out of range, he is also out of luck.

>Also, has any one used the Yasesu FT-8500 dual-bander for packet?

QST tested it in the big dualbander shootout issue. The BER at
9600 was poor. In fact none of the current crop of "9600 ready"
dualbanders actually had good BER. The Azden PCS9600D was very good,
but is 70 cm only. The IC820H was acceptable, though not great,
but is of course a big expensive desktop unit. The best choices
remain dedicated data radios, either the TEKK KS-900 or the
Kantronics D4-10 if you need more than 2 watts. Both of these
are excellent, and the TEKK is under $150.

If you're serious about packet, you'll dedicate a radio to it
anyway. Dual use never seems to work out very well. Every time
someone else wants to send you Email, or ftp a file off your
system, you'll be down playing on voice and not on the LAN
frequency. And every time someone tries to call you on the
repeater, the radio *will* be tuned to the LAN frequency
instead. So you'll always be missing calls in both modes.
You can't win. Soon you'll realize you need to leave a radio
on the LAN frequency all the time so that the network can
find you, and then you'll be shopping for another radio to
use on voice. Rather than going through all that, just buy
a data radio in the first place for packet and choose your
voice radio based on features you want for voice.

> Could a 'true' FM modulator be added to this radio?

Very likely. If it is crystal controlled, then all you need is a
varactor across the crystal to turn it into a direct FM transmitter.

1807. TEKK KS-900 availability

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-08 00:00:00 UTC
From: janovetz@eehpx9.cen.uiuc.edu
Message-ID: <4kbfjq$rl2@vixen.cso.uiuc.edu>
Source record: 37789

Hello,

I'm in need of 2 TEKK KS-900's either new or used from somewhere
that will accept Purchase Orders from a University (University of
Illinois). From reading this group, it seems that these, in
combination with some modem (1200-9600 baud) would make a perfect
2-way radio link from one point to another (only two nodes on the
frequency). If anyone has any information or other suggestions,
please let me know. From other messages, it looks like they cost
around $120 + $25 for crystals, right?

Jake

1808. Wanted: 9600 baud modem by DF9IC / G3RUH

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-08 00:00:00 UTC
From: janovetz@eehpx9.cen.uiuc.edu
Message-ID: <4kbg7a$sdq@vixen.cso.uiuc.edu>
Source record: 37790

Hello,

Piotr Kaczmarzyk mailed me with information about a 9600 modem
designed by DF9IC and improved by G3RUH. He said that this and
a data radio, like the KS-900 is all we'd need for one side of
a 2-point radio link. I assume we just plug the modem to an RS-232
port and it looks like we connected it to the other machine, right?
In any case, where can I find schematics, etc. Piotr mentioned
that he had PCBs, GALs, and EEPROM binaries. Are these available
from some supplier for us to assemble? What else would be required?

If this proves too complex (to be done in our 4-week time frame),
what about less expensive 2400 baud modems?

Thanks very much for your time (in advance!)

Jake

>installed in my TNC-1.
>
> Drop me a line via E-mail or a note to this list, and let me
>know what you are running, and where I can find a copy.

Ron Raikes (WA8DED) had a terminal program called SS ("split screen")
that he wrote for talking to his firmware in host mode. He only passed
it around to his friends. He did, however, freely publish the specs for
host mode with the hope that other programs would evolve. eSkay was one.

I had DED eproms in both my TNC-1 and -2. The hostmode was identical
between them.

: been scouting the various bands for activity in that mode.
: I've discovered a fair bit on 80, 40 and 20 (the open bands
: these days), but next to nothing on the 30 and 17 meter
: WARC bands.

: Now I realize that the WARC bands probably don't appeal to
: those whose primary interest is contesting. I also guess that
: there may be a reluctance by some with limited space who want
: to optomize what space they have for antennas for the bands
: "where the action is".

: This is certainly not to say the WARC bands are dead. Far
: from it. There is a fair bit of activity on phone, cw,
: packet and the TOR modes, but as I said, little if any on
: RTTY.

: There's nice open space there just waiting to be filled.
: You might be pleasantly surprised by the propagation on
: these bands and what you can do with just 50 - 100 watts
: and a simple dipole - especially now during the low end
: of the solar cycle.

: So how about giving it a try, RTTY enthusiasts. Break away
: from the crowds and try something new and a little different -
: RTTY on the WARC bands.

: Hope to see you there.

: 73...Alan VE3XAG

I've sent CQ on 30 meters for hours at a time, and have never had
anyone come back to me. I used to hear an occasional stations,
but not for 3 or 4 years now.

Jim.

1811. Is there a directory of packet nodes???

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-08 00:00:00 UTC
From: david_mcgee.mailcenter#u#17@maca.sarnoff.com

Source record: 37793

I'm wondering whether a directory of packet nodes exists. I'm trying to find a DX Packet Cluster node accessible from North Central Pennsylvania and so far am no having much luck. The local packet guys don't know much about DX so don't seem to be aware of this type of packet service. It would seem to me that a listing of packet nodes by type and frequency would be generally useful to packeteers and dxers alike.

>------------------------------

Tapio,

All of the above would greatly improve the clusters well deserved reputation for spectrum hogging.

Here in Maine, we do not and will not allow them on the network for this reason. Do not look to improvements from the cluster sysops or the cluster software writers either-hasn't happened yet, and there are no rumors of impending improvements.

While the abuse on the user frequency is very bad, it pales in comparison to the abuse on the backbone-the overhead just to keep the clusters connected as a network is staggering. No one seems to care.

The result is that the cluster sysops have to maintain their own private networks (because they arent allowed on the public ones). A damn shame.

Other modes have cleaned up their act relative to bandwidth hogging, and still have improved their performance. As a result, we have aa4re, w0rli bbs's on the way out, and fbb systems on the way in. It's time for the cluster system to clean
up their acts as well.

Unproto inputs and outputs for ALL cluster traffic on the user freqs would be a great help on the user freqs. Compressed mail forwarding and bulletin forwarding between the nodes and between the host/user is long overdue as well. Routine overhead traffic between the clusters needs to be gathered, buffered, and transmitted to other nodes at regular intervals in compressed format. This business of a users disconnect from a dx node being IMMEDIATELY transferred to all other nodes (in a SINGLE dedicated high priority packet) has to go. So far, the cluster writers only response has been the provide a 'limited protocol' link.
With limited protocol, we give up FUNCTION and UTILITY in return for reduced overhead.

If we gather, buffer, compress and transmit the non-critical overhead traffic (say once every 10 mins), then we replace 10 k worth of overhead on a HIGH PRIORITY
basis with 300 bytes of data (or even less). The only sacrifice is that you don't
have an 'instant' snapshot of who is actually connected to all cluster nodes, and
that your data might be an hour old or so...

In return for this slight loss, you reduce the overhead by 95 percent or more. But, there would be no need for limited protocol links as they currently exist! The cluster would be available to EVERYONE, EVERYWHERE..because network managers would have no valid justification for excluding them from public networks! The cluster operators would not have to maintain nearly as many 'private backbones' themselves either!

Sounds like a good deal to me-Everyone wins!

These days, even private users (individuals) use compressed forwarding for everything...there is no valid reason why MEGA USERS (sysops) can't do the same! A prime example of this is tcpip, which was banished from public networks since day 1. Technological development of the network and smart use of timers in the tcpip software, along with compression of all data in/out of the tcpip station have allowed tcpip to coexist on public packet networks now!

Private users (individuals) use FBB/TPK companion software to do timed, compressed,
automated data retrievals from bbs's too!!!!

'Bout time for the cluster sysops clean up their acts and to come into this century and join the rest of the network, wouldn't you say ????

73 and GL...Art, KY1K.

You're all right. I am the author of a DxCluster program ... And agree
with your proposal ... but dont forget if you're not connected to the
cluster you cant send any Dx Info ! And without info a cluster have no
reason to live ...

Best way would probably for the user to use a program wich should able
to get UI frame even a connection is established to the cluster. Or
something like that ... Any more idea about a such system is the
welcome. I'll happy to develop it in my software.

The BEST radio for 9600 BPS Packet IS the MOTOROLA MITREK! This radio can be had for $50.00 and the mods are easy! There is a mod here in Southern CA that allows you to retain the voice capabilities of the radio!

One draw back to the Mitrek...it is a crystal controlled 4 channel radio. This would be the choice for dedicating a radio for 9600 Packet.

1816. How do I avoid noise on computer and radio interface?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-09 00:00:00 UTC
From: gberry@access.eve.net
Message-ID: <4kd0mf$7uq@news.mountain.net>
Source record: 37656

I tried to interface my 486DX66 notebook computer to my AOR-1500 scanner. I wanted to try decoding CW and other signals from the combination. Whenever I bring the computer into the same room as my scanner, I pick up very loud QRM on the scanner. I can have a strong signal tuned in, but the moment the computer is turned on, I hear only noise. This is my first attempt at combining my computer interests with radio.

Does anyone have recomendations for eliminating RF noise from such an interface? Any comments are greatly appreciated.

Thanks in advance,
Glen Berry

Fine with me, even up to 32bit words, thou it becomes kinda hard on
the DAC/ADC :), What I really want is that the entire electronics are
controlled by a small computer onboard, not a cheesy remote control
box, and all equiptment onboard will be controlled directly by that.

>Latency is the other side of the coin. The larger the control frame,

>ups latency, about 1.67 mS per additional channel.

I'm thinking about a 2 way system, with the chopper reporting the rpm and
other craps happening on-board :), so I guess that a 19600 bps RF modem is
needed. BTW: I'm not too sure about what you mean by channel in the
transmitting sense, since what I want to do is put all the control data in one
packet and send it out as soon as possible, and maybe even some compression

thrown in for good measures....

>Now this is for a one-way system with no error control or acknowledgements.
>If you want two-way action in packet fashion, other factors come into play.

>packet because you won't be able to send a new control packet until a
>response packet is successfully received. This will at least double
>latency, so again you need faster equipment and faster baud. With 1200
>baud packet, latency could be as great as 7 seconds. That would be a
>disaster.

The error control I'm thinking about is the "throw it OUT" technique, which
will just trash the errorous packet and send back the regular packet with a
"error in packet" flag. (use 32bit CRC)

Also I will not RC ANYTHING that have 1 second dalay or more, as it is
quite hard to do what NASA is doing (5HR DELAY!), and I don't want
my project chopper coming chopping down at my head :).....

>I think that if you want to use packet technique, you'll need two
>independent radio channels, one for uplinking commands, and the

Glen:

Start by using an outdoor antenna, with shielded coax cable to the scanner.
Make sure the shield is grounded! Try moving the radio to different parts of the
room. Use high quality "shielded" cables for your modem, printer, external SCSI
devices, etc. Make sure your computer and other devices are using three prong plugs
with a grounded three prong outlet (make sure it's grounded). Use those iron donuts
on your keyboard & mouse cables (available at Radio Shack). If you still have a
problem, try making a foil sleeve, ground it, and wrap it around most of the scanner
body.

Since you're using a notebook, it'll be harder to shield and suppress
the interference than it would be for a desktop machine. The same
techniques apply, however. The objective is to turn the housing into
a Faraday cage that traps all the unwanted RF inside the computer
and doesn't let any out to get into your radio equipment. A Faraday
shield requires a completely closed conductive enclosure to be effective.
Wire mesh can work, conductive sprays are available, etc. Any cable
that enters or leaves the Faraday shield must also be completely
shielded or fully suppressed, don't forget the connector hoods, they
should be metal too, not plastic. If you are using external power
for the notebook, the power lead should be suppressed with a ferrite
core.

You should also shield your scanner. Most of them typically aren't
fully shielded and can pick up nearby signals without an antenna
directly into their circuits. And of course you should use an outside
antenna, located as far from the computer as possible, and fed with
well shielded feedline. In fact, try this first. It may offer sufficient
protection without requiring you to disassemble and re-engineer your
notebook's shielding.

I have used a rf-concepts 170 watt amp on packet for many years. There is no problem using amps on packet. But if you did get an older amp that was a little slow on the relay switch, you can adjust most tncs in the command set to delay on the data sent out to allow for the amp to get keyed all the way before data is sent. But I had no problem and didn't have to adjust anything with the amps I have run.

Heh, heh, it's nasty isn't it. What you have to do is modulate
both the VCO and the reference oscillator. Otherwise the PLL
loop filter will remove the lower frequency components of the
9600 baud modulation.

This is a little tricky because you have to use crossover networks
to only modulate the reference oscillator at frequencies below
the loop filter cutoff and still modulate the VCO above the cutoff
in order to maintain a flat response. You need an opamp with a RC
filter matching the loop filter cutoff in the feedback loop driving
a varactor you add across the reference oscillator crystal, and an
adjustable resistive divider to proportion the signal to the reference
and VCO varactors.

Kenwood didn't really intend this radio for 9600 baud packet so
it isn't designed properly to do it. (Frankly it isn't very good
at its intended purposes either, it has excessive phase noise,
the front end noise figure is pretty poor, and it overloads
easily.) But you can *make* it work. I helped a friend get his
going. (That experience reinforced my resolve to buy "anything
but Kenwood" for my own use.)

If you don't need frequency agility, a simpler approach would be
to build a varactor modulated crystal oscillator and substitute
it for the synthesizer in the 811A when you want to transmit 9600
baud packet. (You could diode switch it in and out with the TNC
PTT signal.)

Yes and yes. T/R switching time is a factor, and you have to increase
Txd to allow for it. Too much Txd slows down everyone on the channel,
so you need an amp with fast T/R. And yes you can do it because you can
get fast amp T/R with PIN diode switching. (For 1200 baud, even relay
switching is fast enough.)

There's already a suitable protocol available, it's the Pacsat protocol. All we need is for a cluster author to implement Pacsat protocol in his system and users can use the already available Pacsat ground station software to receive the spots and uplink spots to the cluster. This method can decrease LAN traffic by up to 26x over the way cluster works now.

IMHO the "shame" belongs to the "public" network which has so little capacity it can't even support 26 users at a time (the max a cluster supports). Cluster doesn't operate efficiently to be sure, but rather than banning it from the "public" network, and forcing all those Dxer resources ($$$) into building a duplicate network, you should be tapping those resources to upgrade the "public" network to have a decent throughput so that a piddling cluster can't begin to bog it.

>packet and send it out as soon as possible, and maybe even some compression
>thrown in for good measures....

Ok, I'm using channel in two senses here. Of course there is the radio
channel, but that's just one frequency in either the conventional RC case
or the packet case, with a stream of data encoded on it. The other use of
channel is in the RC sense of a control channel, IE the rudder channel,
the aileron channel, the throttle channel, etc. In ordinary digital
proportional control systems, these channels are multiplexed in serial
order onto the single radio channel, IE it is a time slice system. With
packet, these channels are multiplexed into packet frames in digital word
order, IE it is effectively a time slice system too. In either case, a
value for each control channel must be sent in serial fashion before a
new value for that control channel can be sent, IE rudder, aileron,
throttle, flaps, geardown have to be sent before another round of rudder,
aileron, throttle, flaps, geardown can be sent. The RC control channels
round robin, so the more channels you have, and the longer it takes to
transmit them, the longer the latency you have in the control system,
IE too much latency and control becomes "rubbery".

>>Now this is for a one-way system with no error control or acknowledgements.

>
>The error control I'm thinking about is the "throw it OUT" technique, which
>will just trash the errorous packet and send back the regular packet with a
>"error in packet" flag. (use 32bit CRC)

Yeah, that's the standard way of dealing with things. A retransmission
won't happen until the frame with the NAK bit set is correctly received,
or a *long* timeout timer expires. This can lead to *huge* latency in
the control system. This is not a good plan.

>Also I will not RC ANYTHING that have 1 second dalay or more, as it is
>quite hard to do what NASA is doing (5HR DELAY!), and I don't want
>my project chopper coming chopping down at my head :).....

Exactly. That's why the system must be designed for a low and *fixed*
latency. Otherwise it becomes very difficult to control, tragically
so in some cases. That's why you want to run in connectionless mode.
Running in connected mode with ACKs and NAKs can be like trying to
control a puppet with rubber bands for strings. Control will lag
then overshoot.

>>I think that if you want to use packet technique, you'll need two
>>independent radio channels, one for uplinking commands, and the

>
>I'm not sure what you mean here, as I'm a "brand new" newbie here,
>and have just about ZERO experience in Radio area, so I still got a lot
>to learn here.....

Ok, UI frames are *connectionless*. They don't wait for ACKs. You can
repeatedly send control frames, and the servos do what you want, when
you want them to do something else, you just change the values in the
control frames being sent. Bad frames are simply discarded at the
receiver because another will be along in a moment. By separating the
uplink and downlink radio channels, IE running duplex, control commands
don't have to wait for feedback telemetry before being retransmitted
because the radio channel doesn't have to be *shared* for uplink and
downlink. Thus, for example, you can command 10 degrees of right rudder,
and *keep* commanding 10 degrees of right rudder. If the first command
packet gets through undamaged, then you have immediate right rudder and
the following packets are ignored because the servo knows it is already

at 10 degrees. But if the first command packet is corrupt, you don't have to wait for a NAK before resending it, you just keep sending it until you want to command some other action, and it will be acted on as soon as it is received correctly. Similarly with downlink telemetry, the model keeps sending its telemetry over and over, changing it as things change on the model, and your telemetry receiver accepts the telemetry and updates your status indicators. Bad frames are again discarded, which isn't a real problem because another will be along in a moment.

Realtime control is different from a file transmission. Any data lost in realtime is useless if received at a later time, so it is discarded. Only the latest valid information is kept and acted upon.

>Bill Crocker

Bill, connections to "ground" generally are of no value in reducing
interference of this type, in fact they can make it worse by creating
loops for the unwanted signal currents. Bonding all the equipment shields
directly and tightly together often helps, but sometimes that makes it
worse too. The only cure for interference is to contain it or exclude it
(depending on whether you're dealing with the emitter or the receiver).
That requires tight shields. Ground has very little to do with that.

There's nothing mystical about "ground" that gives it interference
suppressing properties. It's just a big old sheet resistance that
can offer sneak paths for signals to go where you don't want them
to go.

Hello,

I have a very nice Kantronics Kam+ ver. 7.1 w/ the Hostmaster II+ controlling software, which allows you to operate both HF and VHF simultaneously and does all modes allowed. I have not used to the Kam+ enough to justify keeping it, especially when I need the money for other things so it is up for sale. Kam sales for $300 new and Hostmaster II+ for $70 new. I am asking $250 for all and I have cables, manuals and boxes for everything.

If interested please reply via email: deshel01@homer.louisville.edu

73,

de David, KE4FPS

Do you *really* need a cross-over? I suppose you're trying to avoid
a hump in the response around the loop filter cutoff frequency, but
how much of a hump is really produced? Afterall, the loop filter
cutoff frequency manifests itself as a low-pass filter cutoff for
reference modulation, and a high-pass filter cutoff for VCO modulation.
In actuality, the "filter" is really the entire loop, and it already
provides the cross-over function. What you need is independent
modulation level controls for both the reference and VCO.

The MX*Com documentation about two-point modulation doesn't mention
the use of a cross-over. I suspect that it simply isn't necessary in
any reasonably designed PLL.

Beware of the response time of external PAs with RF-sensed T/R switches.
While they're normally pretty fast, you may be surprised at how long
some can be, particularly on the receive-transmit transition. You
may want to attach the T/R switch on the PA to the radio/TNC to eliminate
this component of delay.

I know this has been done. In fact, here in Oulu we have a talking dx cluster, which monitors the cluster announcements and forwards the dx spottings on FM voice transmission. No terminal or cluster client program, however.

UI monitoring may be efficient when you think data communications alone. However, it can easily lead to an unfortunate situation where nobody SENDS any DX info to the cluster. Everyone just listens...

Many people tend to use the DX cluster systems for monitoring only. One should remember, though, that the cluster is only as good as the DX spots entered to the system. There should be a way to limit the DX infos heard... maybe 10 spots for one sent to the cluster. If the regulations didn't forbid, the spots should be encrypted to each client with a different key. ;-)

Well, the two connection modes could, of course, be combined, and thus both efficient monitoring and announcing DX info would be possible. Just a thought...

Ah.... finally something I can answer.... :)

Computer are operating at high speed (33/40/50/66/75/100/120MHz/etc),
and that is easy for them to create strong RF noise around them, the
best bet is to create a grounded metal casing around your computer,
and get a longer cable to connect to your computer. but as your computer
is a note book, you can't really shield the notebook without losing the
use of it, so you might want to build a metal shield that act like an
antenna that receive the RF noise and channel it to the ground, and get
a REALLY long cable to further reduce the interference.

>Does anyone have recomendations for eliminating RF noise from such an
>interface? Any comments are greatly appreciated.

Can't really eliminating the noise, but at lease reducing......

GREAT IDEA, so just make two threads that constantly sending informations,
and two thread constantly checking for errors in the packet.....

Actually the frames will be sending ONE AFTER ANOTHER, as I plan to
use multi-threading Operating System (OS/2!!!) for both the "ground"
and the "on-board" computer, and there will be seperate thread for
each and every tasks.

>Realtime control is different from a file transmission. Any data
>lost in realtime is useless if received at a later time, so it is

That's why I choose "TRASH IT!" error control system rather than
LAPM/V.42/MNP4.... :) After all, all we care is "QUICK" control and
making sure that the $$$ flying in the air will not come crashing down :).

As far as I know, DX spots are never sent in UI frames.

However I am nearing the point of asking for some beta testers of PROPLOG, a program described prematurely in the Proceedings of the 1994 Central States VHF Conference. Much has changed since then. I'm thinking of eventual distribution as fully-functional nagware.

PROPLOG can monitor (with or WITHOUT connection) either internode or user Cluster messages. It plots the reports on screen on a map of scale of your choosing (7 scales instantly available at all times), color codes the text and plot by band, displays other cluster text traffic. It includes contact-logging software, and can look for VHF propagation beacons, copy their code, etc. All dx info and your log is logged to disk, as well as being plotted on screen.

My motivation is to allow automatic collection of VHF propagation information which can be sent on disk to "someone" (propagation studies committees, etc) who would try to make sense of it.

I've been thinking of approaching the packet cluster author with a request for repeated UI-frame transmissions of all posts. My present scheme of monitoring messages to logged-in cluster users is at the mercy of whether anyone is logged in, etc. The internode messages continue whether or not there are any users, and also include the call of the cluster node where the post entered the system....making plotting of postings easier.

The other missing feature in the packet cluster system is good clock time keeping. Since PROPLOG "grays out" old posts, I am acutely aware of how poorly Cluster nodes keep clock time. Very frequently at least one node in the northeasterm USA megacluster is wrong by from many minutes up to two hours. A cut-down version of the Internet NTP (by W3HCF) would solve this problem at far less cost than spreading GPS throughout the net.

Every profession and hobby uses phrases that form a verbal shorthand. For
you
to flame anyone that uses a Q signal in a QSO shows a remarkable lack
of respect for the tradition of amateur radio. As for "10-4 Gud bud", Why
not write a triade about those who use 11-meter skills. For one, I suggest
you return your license. Your not going to enjoy working us Bozos.

FWIW the Q codes have been around for a long time. I have a UK
Government publication which dates back to 1946 listing loads of
Q-codes. The book mainly lists codes for aeronautical use.

There are some interesting anomalies, such as QFO, which means 'you may
land immediately' where one might suspect it ought to be 'go away' :)

Ok, great stuff guys .... I have had two replies telling me, essentially, to put up a decent digital repeater....

Well I have been telling the local amateur community this for the last five years that I've been living here and to date the response has been somewhat less than enthusiatic. What's more they even seem to want to get in the way of such a project, let alone help. Finally there are three voice repeaters in the local area that between them all get probably 1/25th of the activity that the two data frequencies do and yet are definately sacred cows when one suggests the possiblity of using one for data, even if just "sharing".....

So I hope you've got the picture - if anyone has an intelligent and useful answer for my original post I'd be pleased to hear it. At the present time I _have_ to work with this bloody digipeater if I'm to at least ween some of the users off FBB and on to something a bit more networkable :-|

Cheers, Luke.

1842. Locking out nodes on BPQ.

Hi gang. I am running a BBS using FBB and BPQ and I would like to limit the routes that the node picks up. There are a couple nodes on the system here that don't conform to the parameters we have set up and I would like to keep their node broadcasts out of the BPQ node table as they force connects to unstable routes. Is there any way of doing that. I have gone through the docs and couldn't see anything like that. The other programs I am familiar with, TheNET and JNOS, have commands that keep out unwanted routes but I am not sure how to do it with BPQ. If you know how, please email me with any info on it.

Thanks and 73.

Hi all - can someone please explain what APRS is, exactly - what it does, what its purpose is exactly. Likewise can it be run on a baycom modem??? I noted recently that I can download it from the TAPR site so finding it is not a problem.

Have just realised that I could end up with 400+ email messages so perhaps if someone could just do a quick write up on APRS in this digest!

As far as I can tell no one is running the thing down here in VK - well, I have seen no mention of it on the VK packet system!

>something like that ... Any more idea about a such system is the
>welcome. I'll happy to develop it in my software.

I have heard that many requests were sent to the author of the original
DX cluster to improve efficiency, but the rumour was that the reaction
always was "we don't care about protocol efficiency, we only want to
work DX (and presumably: make money from our software)".

Now that a few clones of the DX cluster program are becoming available,
there is some real possibility for improvements!

My suggestion would be to setup something like this:

Each user actively wanting to participate has a connection with the
cluster. This is used to send spots, and by default the DX spots are
also sent on this connection (like it is done now).
Using a special command (probably sent by special terminal software)
it is possible to suppress the sending of DX spots on the connection,
and a "current sequence number" is returned.

Whenever one or more users on the channel have requested this mode, the
cluster sends all spots additionally as UI info. Each spot is prefixed
by an incrementing sequence number. For example:

QQ0DXC->DX: UI pid=Text
12: [dx spot here]

QQ0DXC->DX: UI pid=Text
13: [another dx spot here]

The sequence number could have a small range (e.g. 0-99) and wrap
around after that.
When nothing is sent for some time, the last sent sequence number
could be repeated (possibly without the spot data), like:

QQ0DXC->DX: UI pid=Text
13

Now, the terminal program listens for the broadcasts to "DX", and
prints the spots when the sequence number is the expected one.
When it has apparently missed a spot (the sequence number increments
by more than one), the terminal program sends a special command
that says "please send spot #xx". The result could be the spot
being sent on the connection, or it could be sent as UI again.
The purpose of repeating the last sent sequence number when the
cluster is idle: to make sure that the last sent dx spot is
printed even when nothing follows after it for a while, and thus
no sequence number mismatches are detected by the terminals.

With such a protocol, it is possible to use UI transmissions for
much of the traffic, reduce the overhead a lot when everyone has
decent reception, and still reliably receive everything.

"passive" users can even monitor the DX spots without sending anything.

The timing can be a problem but most amplifiers are fast enough
that an increase in TXDELAY will let it work.
The biggest problem tunning high power is that you won't hear
as well as you talk. That means that you will cause colisions that
aren't necessary. One of the things that a lot of folks don't do is
run a preamp along with the PA. This would at least let them hear
stations far enough out that some colisions would be avoided. I'v
even heard of someone running 150 watts into a 1/4 vert. Not too
great for the rest of us.

<snip>
APRS is a system developed by Bob Bruniga, WB4APR (hope I have the
name and call right without looking either up) for automatic reporting
of the location of a radio station using the packet protocols. Bob
has written programs and developed protocols through which GPS
receivers, computers and packet radio can be associated so that
positional information is sent, received, listed and plotted on
maps. It is helpful if all the elements of the system are
available to all participants, but not necessary.
It is basically for fun, but you can see it can have many uses.

Hi All,

I am building up a 2 port design by pe1pet (Sorry I think the calls correct!)
I have all the components except the PCB Board I have a design for a two
sided board but only have facilities for single sided.

My question is :

Is there a source of these PCBS ??

Is it possible to do a double sided board on single sided equipment
I have only ever done single sided so It will be a chanlange what ever..

The problem isn't so much an amplitude "hump" in the response,
rather it is a nasty phase shift in the response near the filter
corner frequency. If you don't compensate for that, the eye looks
really nasty. By using a complementary crossover network, you can
get a pretty decent phase response. You won't get a *perfect* eye,
but its not bad.

I do try to get textbook waveforms, and that might not be absolutely necessary, but it can't hurt.

Gary

Right. I agree completely. Don't depend on RF switching, hard switch
it. That's also why I use the "sideways transformer" circuit instead
of a RC circuit for keying PTT on "leaky" PTT HTs. It gives a harder
and faster switch.

Brian's right - but I should point out that I believe he means a
duplex repeater for packet, not another digipeater to make things
worse.

The Pacsat broadcast protocol is heavily file-transfer-oriented.
While the principles of operation will surely be the same, you will
need enough modifications to make existing Pacsat software useless when
receiving DX spots.

The proposal I detailed in another article operates similar to Pacsat
broadcast, but without the binary header and dedicated PID that make
it difficult to implement in existing systems and difficult to monitor
by existing user software.

1862. Ideas for low-cost NET/ROM backboning???

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-10 00:00:00 UTC
From: Kenny Bain <kbain@linknet.net>
Message-ID: <316C77D6.133F@linknet.net>
Source record: 37702

Hi!

I'm looking for suggestions on low-cost approaches on back-boning with NET/ROM tnc's. Most of the tnc's that will be used are TAPR-2 clones (MFJ-1270 & PacComm Tiny II's).

We understand how to network the tnc's via serial ports and interface boards; but what I'm looking for are suggestions to converting the tnc's to 9600 or higher baud speeds, and ideas on radios to use. I'd like to hear from folks using gear for backboning that found low-cost routes.

I know that the tnc's will have to have additional modems installed in them, like the G3RUH modem, but are there other, or better alternatives? Plus, what is the cost/benefit of differen alternatives?

And, on the radio end, I'd like to hear of suggestions of radios that can easily be modified, or require no mods. Or, if anyone has come across commercial gear that can be bought surplus, then easily converted.

Any ideas appreciated!

73, Kenny

Correct in that statement

5*** Quoting Gary Coffman to All dated 04-06-96 ***
> modify the Channel Guard input (which is direct FM) to get sufficient
> deviation and bandwidth for proper 9600 baud operation. This requires
> modifications to the individual Icoms.
Incorrect in that the CG input is ALSO to the Phase Modulator in standard MSTR
IIs.....
you cannot modify the ICOMs for FM easily...best is use a MOTOROLA MICOR
channel element meant for FM use and inject the audio into the element audio
in (the elements are untuned and will work with the right hook up in the GEs)

BTW most commercial xtal rigs use Phase, not FM....SOME do...and most new
synthesized rigs are FM....indirect FM but FM ....

> Mitrek too, in particular the IF filter issue.
I have run my GEs at 3 Khz deviation and have no problems at 9600 with Data
Engines and their 9600 baud modems hooked directly to the FM mod on the
exciter and using a NON polarized cap right off the discriminator out and into
the 9600 modem....(which is how GE gets their DIGITAL CG btw)

5*** Quoting Gary Coffman to All dated 04-06-96 ***
> I have recently come to believe that you may be better off just

> are several single chip IF subsystems that may be more suitable.
> And it may be better to just use the PA and replace the exciter
> with a more suitable one as well if 9600 baud operation is intended.
> There are also single chip solutions here.
Just keep the deviation at 9600 BELOW 3.5 Khz MAX and all will work as is
..true there may be room for improvement BUT it does get you on 9600 with
little problems....(Data should ALWAYS be run at less than 70 % max channel
deviation...and since we consider 5 Khz normal for voice FM, 3 Khz works great

1864. Radio Station Database Program Stand Alone

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-11 00:00:00 UTC
From: Charles Bolland <chuck@flinet.com>
Message-ID: <316C9205.2CAC@flinet.com>
Source record: 37704
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space,rec.radio.noncomm,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Sir,

It's still available. The IBM/DOS Broadcasting Radio Station Database Program for Longwave, Mediumwave, and Shortwave. Over 4,000 records included already. The program is completely read and write. Records can be added or changed. Sorts in many different formats both on your screen and printing.

If you would like a copy of the program, send your request to "chuck@flinet.com". Please include your MAILING ADDRESS. For example, your street number, city, state and zipcode. Also include your Email address.

The program will be sent to you via Email probably within 24 hours if not sooner. If you request the program and haven't received it in that period, check back with me..

Remember to send your address. Requests without a mail address will no longer be acknowledge to save time on the internet. In the past, requests without an address were reminded with a message. Usually, the reminder went unanswered anyway. If it was, the reply was sometimes very rude.

This program is free! Everything works. It has many features and they all work, not like shareware where some of the features work and others don't.

You address will be kept confidential. I will be sending you a first class letter later explaining another full featured Database program available. It's very big!

1865. AEA PCB-88 and Procomm Plus 3

I am running and AEA PCB-88 and Procomm Plus 3. I have noticed that when I have my monitor port wide open and a node makes a node transmittion, the "special" characters hit Procomm and completely redefine my character set.

I can remember setting the PCB-88 to block certain characters ... such as the screen clear ... are there other characters I should remap to stop the thing from redefining my character set?

Thanks!

I've been using ZD Engineering's CATV matching transformers here at my site
for over 2 years on both VHF and UHF packet and would recommend them highly.
His ad is in most of the major ham magazines and it'll run you about $40/pr.
If you have a long run or operate UHF, this method can't be beat for cost
and performance. See the Dec '91 73 review for more info.

Take a listen on 145.790 MHZ

APRS needs full TNC, will not work in KISS mode
at this time. But you can monitor with any TNC

Even if you don't have a radio or TNC the map part of the program
is fun to play with.

A somewhat jaundiced opinion:

It's a clever hack.

It's a way for hams to continue to transmit but without having to worry
about what the person on the other end might think about what was said,
since there is no person on the other end and nothing was said.

It's a way for hams to automatically report their location, something
they would take up arms against if they were required to do it.

It's a way for hams to keep track of where the wife/husband/SO is all the
time for those whose relationships are not quite as secure as they'd like
them to be.

It's a way for hams to have a cheap AVL (automatic vehicle locater),
just as autopatches are cheap cell-phones.

Oh well.

1. Use the PACSAT protocol to disseminate the information. There's no need to reinvent a protocol when we already have a perfectly good one and software to implement it.

2. Use a connection with real long ("never") keepalives to send the data to the cluster/node. Remember that an inactive connection doesn't use up ANY bandwidth.

Source record: 37711

Rob Jannson suggests a relatively complicated scheme for sending spots
in sequence-numbered UI frames.
I really like his idea of a simple command to the Cluster meaning "I'll
monitor your UI frames, don't send me spots directly." That would greatly
reduce channel loading.
Let me assure you all that sequence numbering the UI frames is NOT
necessary. The PROPLOG program I'm "finishing" gets along just fine
ignoring message sequence numbers. It merely matches the time, frequency,
reported call and reporting call contained in all DX spots, and rejects
duplicates. Nothing has to be added to the present message content. I've
never noticed a problem in over two years using this approach. I would,
howver, like to see the node ID, where the post entered the Cluster
system, added to the user messages (it's in the internode messages).

That is what we have here in Helsinki too on 2 meters. One problem is that
sending your dx-spots is impossible that way..

>UI monitoring may be efficient when you think data communications
>alone. However, it can easily lead to an unfortunate situation where
>nobody SENDS any DX info to the cluster. Everyone just listens...

This could be handled with UI-frames too, user sends the data to cluster and
user's terminal program verifies the reception when cluster sends the same
dx-spot to the band.

>Many people tend to use the DX cluster systems for monitoring only.
>One should remember, though, that the cluster is only as good as the
>DX spots entered to the system. There should be a way to limit the
>DX infos heard... maybe 10 spots for one sent to the cluster. If the
>regulations didn't forbid, the spots should be encrypted to each
>client with a different key. ;-)

How original..:) But sadly that is true, specially for the upper bands. 2m
and 70cm usually don't get many spots, often there is none per day. Some
people just don't have the equipment for those bands, I for example have
only a very modest 2m & 70cm FM setup. But I like to see what other hams work..

>Well, the two connection modes could, of course, be combined, and thus
>both efficient monitoring and announcing DX info would be possible.

This is the way it probably will be, most hams use the normal way of
connecting to cluster anyway. But when they discover that operation is much
smoother 'offline'..

>
> Gerry K8EF

I have had this same question ever since APRS appeared locally
and started consuming bandwidth. I cannot see "that it can have
many uses".

All I see is a bunch of hams with enough excess cash to be able
to afford a GPS receiver sitting there in front of their
computers all staring at the map on the screen watching their
"buddies" turn on thier computers & GPS systems. They then sit
there all evening long counting stations or keeping track of the
maximum or minimum number on at any one time. Since GPS is only
really needed when something is actually moving this is obviously
quite boring. Occasionally they get a really big thrill when
they see someone (with even more excess cash so that they have a
notebook PC and a handheld GPS) in thier car driving down the
interstate.

While my previous rambling paragraph is a bit tongue-in-cheek, my
point is still valid, namely: Does anyone really use APRS
productively? I could maybe see the mapping program being of
value if it were used to keep track of beacons heard (and their
locations) to check on propagation, but does anyone actually do
this?

It must be nice to live in an area where there are no collisions between packet transmissions. :-) If you don't have a sequence numbering scheme, users will never know if DX spots are missed due to collisions. I think it's a very workable scheme that will go a long way toward relieving some channel congestion. I agree that the originating node callsign should be included so that the user software can filter DX spots if desired.

Hi,

I have recently obtained an Icom IC-125 High Band PMR radio, which I intend using for 9k6 linking. It is a 5 channel, diode-programmable synthesised radio of the upconverting kind, so should give excellent BER performance.

I believe I need to change crystal X2 to 40.2166 MHz and retune to get it into the 2M band, and fm X1 (21.4 MHz) with a varactor for modulation.

Does anyone have any experiences of this set, and I would *really* appreciate a copy of the circuit diagrams etc.

Here's hoping ;-)

Steve

I think you have just thought of two of the many uses. People
who like to fly balloons find APRS helpful in telling them where
the balloon has been (manned or unmanned). But generally speaking,
ham radio is a hobby. Some of the hobbyists(?) get a kick out
of being helpful, like reporting on marathons or hurricanes or
floods, and some just have fun other odd ways.

Two useful uses for APRS that I have seen are tracking moving objects, and
DF'ing.

For public service events (such as the upcomong Boston Marathon), we will
be putting GPS beacons (along with hams) on certain of the buses. That way,
net control and the event coordinators can easily determine where the various
vehicles are without tying up the repeater constantly asking where they are.

I have also seen a demo of APRS used for DF'ing, where mobile stations
would beacon location, signal strength, and heading; it makes it that
much easier to do the triangulation that way, and most jammers (or kids with
stolen radios) aren't listening there.

Another use I can see is for tracking baloons or other free-moving radios.

I agree; watching various home stations pop up on the screen and not go
anywhere is a bit boring. There are, however, some very good uses for
APRS.

This is easy to answer.

It is what an amatuer likes to do. Doesn't matter if any other amatuer agrees with it or not. Doesn't mattyer if you think it is something "that has many uses." If an amateur has fun doing it -- and hopefully learns something along the way -- and uses radios -- then that is what this hobby is all about.

How about folks that operate NTS, satellites, or any other mode in amateur radio.

If you were to poll ever amateur about what modes they think useless, we could define that all of amateur radio is useless. Not the case at all. Anything that an amateur radio operator does that either expands the knowledge of radio operations or allow them to learn something and have fun -- then it is a successful mode.

Amateur radios greatest strength is its diversity.

Cheers - Greg Jones, WD5IVD

LHI POCSAG Decoder

Pager data stream monitoring unit

L0pht Heavy Industries is proud to announce the release of our POCSAG monitoring unit. Used in conjunction with a radio scanner or receiver, it allows off-the-air decoding of POCSAG paging signals at 512, 1200, or 2400bps. Both numeric and alphanumeric messages will be decoded, as well as a hex dump of raw POCSAG codewords.

This system is useful for the testing of paging systems and transmitters. With the included software, one may reject or log to disk specific pager capcodes, making it easier to track only the necessary signals. The device is powered off a PC-compatible serial port and is extremely small - handy for portable use.

The unit is available in both kit ($59.95 + s/h) and fully-assembled ($89.95 + s/h) versions. All components, schematics, software and documentation are included. Fully-assembled units are tested before shipment. General soldering and electronics knowledge is required to construct the unit from kit form, so please be aware when ordering. LHI is not responsible for any results, good or bad, produced by the user during use or construction of the product, so consider the assembled-unit if you are not confident in your assembly skills.

To:

POCSAG Project Division
c/o L0pht Heavy Industries

P.O. Box 990857
Boston, MA USA 02199-0857

Please include $59.95 for kit-form or $89.95 for fully-assembled unit plus $5.05 for shipping and handling in United States currency for each unit ordered. We will ship all orders via First Class United States mail to anywhere in the World. Cash, Check or Money Order accepted, sorry no Credit Card orders. Please make all checks payable to L0pht Heavy Industries. Massachusetts residents please add 5% sales tax. Please allow four to six weeks for delivery.

L0pht Heavy Industries (L.H.I.) assumes no liability for lost or misdirected mail. LHI reserves the right to refuse sale of this unit to any person, organization or entity. All sales are final.

Any questions can be directed to pocsag@l0pht.com

1886. PK88 and external modems...

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-11 00:00:00 UTC
From: "Freeman P. Pascal IV" <pascal@pascal.org>
Message-ID: <316DD650.41C67EA6@pascal.org>
Source record: 37726

I was trouble shooting a problem with my PK88 today and noticed that
the PK88 has as the means to use an external modem via pins 13-16 in
J1 (passing CLK, CD, RD, and TD respectfully). Jumper(s) JP4 must be
set to "B" position to use the external modem. This would explain
the additional values for "HBAUD" above 1200bps mentioned in the manual.
Although, I cannot find any mention of using external modems in the
manual.

I was curious if anyone has ever made use of this feature? Has anyone
use the PK88 as front-end for a higher speed modem (2400 or 9600bps)?

> connected it to the other machine, right?

Wrong ! The DF9IC modem works like any other modem : you have to plug it on a
TNC or any packet-radio controler like this (USCC Cards, RMNC, etc...).
As far as I know, it uses NRZ signals (G3RUH uses NRZI).

> In any case, where can I find schematics, etc. Piotr mentioned
> that he had PCBs, GALs, and EEPROM binaries. Are these available
> from some supplier for us to assemble? What else would be required?

take a look at http://www.baycom.de, the BayCom Web pages and check for a
local BayCom distributor. If you can't find one, I'm the French one and will
help you getting the DF9IC modem.

> If this proves too complex (to be done in our 4-week time frame),
> what about less expensive 2400 baud modems?

Hmmm, 2k4 isn't worth now. Turn directly to 9k6, I'm sure you won't regret it
later :-)

1889. Impending HDTV....

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-11 00:00:00 UTC
From: pmzone@clearlight.com
Message-ID: <Dppu4w.Ey6@firewall.tasb.org>
Source record: 37729

Does anyone know if a newsgroup exist where HDTV issues are discussed?

If not, I figured our amateur radio newsgroup would be the best place to post a technical question about the impending HDTV broadcasting changeover...So here it goes....

The projected cost figures of the HDTVs are extremely high compared to current TVs. I suspect the majority of american families will be unable to come up money for the HDTVs.

Since HDTV transmissions will be incompatible with the current NTSC transmissions, is it possible and likely that TV accessory manufacturers will come up with an economical convertor box to convert HDTV transmissions into NTSC signals, so that HDTV broadcasts can be viewd by regular NTSC TVs?

Your comments on the topic are appreciated. Please email your response to pmzone@clearlight.com. Thank-you

>system, added to the user messages (it's in the internode messages).

When you don't use sequence numbers, there is no way your program is going to know it has entirely missed a DX spot. This may not seem to much of a problem on a channel where 20 users are connected and you see everything many times, but when a new protocol is adopted and the cluster is sending every spot only once, it will not work.
(each user will see only a fraction of the DX spots, depending on the fraction of UI frames that he happens to receive correctly).

The word that "when using this new method you don't get everything and you might miss that important spot" is going to spread quickly, and everyone will go back to connected mode "just to be sure".

This, while "duplicate detection" is nice to have and will save bandwidth when you can receive multiple DX cluster nodes, it is not a replacement for sequence numbers and retransmission requests.

I hope this is the correct newsgroup to post this article. Could someone who has a registered version of GSHPC (DL4SAW) inform me if the program has automatic save. I am confined to a wheelchair and have to reply on people to gt me in and out of the shack. It is nice to have auto save feature so I can tell who's been on while out of the shack. I know all shareware versions dont have that function.

It is a brilliant program so I have the fingers crossed that you will give me the good news so then I can order my own registered copy. Tnx in advance for any replies. 73's de Jim (ZL2BMH)

Yawn. My, my, you seem to have taken this all very personally. Try to
see if you can calm yourself a bit.

Contrary to your experience, there are amateur radio operators that carry on verbal conversions without the use of CW abbreviations and juvenile CB-like jargon. Apparently, you've never spoken to one. I can't understand why those types of amateurs do not talk to you considering your sparkling witticisms and intelligent communication skills.

One of the things you learn about that guy is, that he hates everybody, and nothing measures up to his accomplishments. It's rather boring. But if you do a search of his name in Deja News, you will see that maybe .05% of his contribution is something positive. The rest is constant whining...

--

APRS originally served the same purpose as the military TADIL system (Tactical Data Information Link). The system is used to provide Track positions of combatants. For example the E-3 at altitude will use HF to drink in Air, Sea, and Land targets, and relay the data via UHF to the Command and Control Element. The difference is that the TADIL system has one master, and many slaves. Amateurs refuse to be a slave generally (notice the Node count is approximately equal to the number of packet station) and this system of the master polling each unit for Tracks, would be a sure loser.

Trying to translate this into something that would be useful in a community is difficult. Here in Oklahoma there was some thought to incorporating it into the Tornado Alert system. It doesn't work well. The storms are too dynamic, and choosing any frequency as the storm frequency attracts everyone to that channel, with none going radio silent.

Without a polling feature by a master, the system breaks down.

If people are willing to define a protocol, where a central node (Net Control Station - NCS) polls the Participant Unit (PU), and has a Pop-Up mode for joining the net, then the system may serve an useful purpose. At that point it could be used for Data Link. For example in OKC there was several Ham sites during the bombing that relied on voice to order supplies, and state status. The same for Tornado tracking. Unless it's organized, it's worse than what it is trying to replace.

1898. linking two PCs via radio operating in duplex so that they can function like a network

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-12 00:00:00 UTC
From: zr6kil@ilink.nis.za
Message-ID: <4kouup$p7c@ilink3.nis.za>
Source record: 37505

Hi to all.

I can get horns(or cones) to TX and RX in the (I think) 7GHz up to
10GHz.
I would like to use them with the appropriate software and hardware to
link two PCs to each other so that I can use them both for a 2 PC
network. Due to the frequency and bandwith I would be able to run the
radio links in duplex mode.

Would anybody be able to help me with the software and hardware where
I can convert the RS232 digital signals into analogue and vice versa?

Any ideas welcome.

Clint.

I live in an area with very heavy cluster usage, but listening to the
cluster makes me think that most of the repeats are due to poor AX25 (weak
signal?) performance, not collisions.
With MULTIPLE repeats of UI frames, you bank on probability to avoid
collisions and assure successful reception. The efficiency of using UI
frames comes from their *broadcast* nature, without acknowledgement.
Reducing the channel loading by using UI frames would reduce collisions.
At present, PROPLOG acts like a promiscuous listener, copying DX spots
addressed to any and all users on the channel. Thus the number of
"repeats" it sees is proportional to the channel loading, compensating for
the increased number of collisions due to more users. Sometimes I copy
the internode traffic with another radio, so I can tell if I've missed DX
postings on the "user" frequency.
With or without sequence numbers, unacknowledged transmissions such as
UI frames won't get repeated even more times to overcome collisions. Why
bother with sequence numbers if they can't be used to overcome collisions?
The answer is to have a system with high assurance of success, so that
the desire to know that you've missed a spot doesn't occur. Or was Craig
suggesting that the protocol be extended to include a NACK message
requesting more repeats of missed sequence numbers? (A variation of the
block acknowledgement scheme suggested for wideband satellite links.)
But you'd have to wait until the following DX post arrived to know that

you'd missed a sequence number - and this may be 15 minutes later except during a contest or 6-m opening.

For the same price as a TNC you too can have a GPS kit
$165.00 US for members of TAPR
or
$175.00 US for non-members

---------- This just in from TAPR ----------

From: Greg Jones <wd5ivd@tapr.org>
To: aprssig@tapr.org
Subject: [APRSSIG:8418] GPS-20 Purchase STATUS
X-Comment: Tucson Amateur Packet Radio APRS Special Interest Group

We are fast approaching the 50+ units that are required for the purchase of the GPS-20 units. Current goal is to place the order the first of next week.

This is to allow any last minute buyers to participate as well as receive one more batch of mail from Tucson. If you plan on getting a GPS-20 in this purchase, please contact the TAPR office ** ASAP **.

*** ALSO *** -- several people have just sent their names to be placed on a list. Dorothy will be attempting to contact all these people, however, TAPR will not be ordering units for folks that have not provided full details on their payment. Please contact Dorothy ASAP if you have not informed her how you will be paying for your unit. If you don't want to send credit information over the Internet you can call (817) 383-0000 or fax (817) 566-2544 the office with the necessary information. If you are sending a check by postal mail -- we need to know that. This might sound brisk, but with an order of over $16,000 -- cash flow for TAPR is an issue.

TAPR will be purchasing a few additional units to allow last minute purchases past the order and with luck we might have a few at Dayton. Bob Bruninga is also purchasing additional units, which I believe he will be making some of these available at Dayton (Bob please comment if I have this wrong).

I'll post another message when we get closer to having the items in and have an approximate ship date. Visa/MCs will be charged when the order is placed with Garmin next week.

People have asked if another purchase will be done in the future. As of right now -- I don't know. We will need to evaluate the outcome of this purchase and see where things are then.

Cheers - Greg, WD5IVD
President TAPR

P.S. Please pass this message along to anyone who you think might not get it from tapr-bb or APRS SIG.

>73 Mike

I agree with Mike. I have been using Paul's matching transformers
with some 1/2 inch CATV hardline. Works SUPER! The transformers
offer the transformation from 75 ohm to 50 ohm in addition to solving
the connector problem with CATV hardline. Not bad for $40 bucks! The
only drawback with the transformers is the backorder issue. I waited
almost six months for mine. They are worth the wait! Given that the
hardline was free and the transfromers were only $40 for the pair, a
similiar run of 9913 would have cost more than twice as much. Of
course the losses with the 9913 would have ben more than twice as much
so I guess thats only fair :-)

Opinions expressed herein are my own and may not represent those of my employer.

1903. APRS USES

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-12 00:00:00 UTC
From: jean@pubs17.si.COM
Message-ID: <m0u7jmt-0002qMC@pubs17.si.com>
Source record: 37734

Here are a few uses for APRS:

Marathons (tracking runners, ambulances, etc.)
Sky Warn (tracking of reported hazardous weather, and the spotters that make these reports)
Weather Ballons (track and finding weather experiments)
Car theft (be nice to know where your car (FULL OF RADIOS) is off to....)
Weather (APRS has the capability to display current weather if the station is equiped with a weather station.

Some areas have alot of mobile activity and it can be fun watching where they are going...

Give it a try, think your be pleasantly surprised.....

This software is available on the net and many HAM BBS.

By the way Nice Job Bob (WB4APR)!!!

Rich B-)

I don't want to argue that the Pacsat protocol is ideal for cluster.
There is certainly room for a different broadcast protocol. The Pacsat
protocol does already exist, however, has a proven track record, and
there is already user software available for it.

Pacsats operate as BBS systems in effect, with each uploaded message
becoming a file, so of course it is file transfer oriented, but so is
cluster. Each spot is also a file at some level, and is transfered as
a file *repeatedly* to each connected user. The major conceptual
difference is that the file doesn't have to be specifically requested,
it is automatically downloaded to each connected user, IE up to 26 times.

With Pacsat protocol, as soon as a new file appears in the broadcast
directory, ground station software can be set to automatically request
and download it. The difference is that once a request is in the queue,
redundant requests are ignored and the file is only broadcast once.
(There is a fill mechanism of course.)

This *user driven* approach has a lot of merit for stations who aren't
connected 7x24. It means, for example, that a new user on channel can
arrange to get caught up to any degree he pleases with the information
stored on the cluster. He can merely wait for new spots to appear, or
he can request several older spots within any range of parameters, he
can get any files or other messages that may be on the cluster, etc.
While he is doing this, any other user can get caught up too, caching
to his local disk an image of what is currently on the server, reducing

the need for redundant transmissions, and allowing messages and files
to be browsed off-line on his local machine.

Having a unique PID also has a benefit. It can insure compatibility
between the server and the user programs, which is good. A broadcast
transfer protocol *is* different from ordinary packet or beaconing,
and ordinary monitoring software may not (almost certainly will not)
produce optimum results. The unique PID, however, does not inhibit
most ordinary user monitoring software from monitoring the channel.
They can still (crudely) follow the information being broadcast.

The unique binary header also has a powerful advantage in that it
can allow multiple files to be *interleaved* during broadcast.
While the Pacsat protocol doesn't fully implement it, a priority scheme
could be implemented where new spot download requests have first priority
and the spot inserted anywhere in the download order without disrupting
other downloads in progress.

To fully realize the benefits of a broadcast protocol, the broadcast
server should own the channel. Uploads, and download requests, should
be on a different channel, IE like repeater split operation. That means
the server can transmit continously if necessary in order to maintain
a low latency response to user driven requests.

I know someone who does this. :-)

>It's a way for hams to have a cheap AVL (automatic vehicle locater),
>just as autopatches are cheap cell-phones.

And finally, this is what it is, and like the autopatch, it can be
useful in some circumstances, such as public service events and
emergency response situations where it is beneficial to keep track
of where all resources are located. It's also useful for tracking
balloons, something a number of amateur groups are actively doing.
Fixed stations even have a use for it. It can be used as a smart
automatic propagation beacon, showing graphically where and when
the band opens to certain areas. I find this the most interesting
application of all.

|
| This is easy to answer.
|
| It is what an amatuer likes to do. Doesn't matter if any other amatuer agrees
| with it or not. Doesn't mattyer if you think it is something "that has many
| uses." If an amateur has fun doing it -- and hopefully learns something along
| the way -- and uses radios -- then that is what this hobby is all about.
|
| How about folks that operate NTS, satellites, or any other mode in amateur
| radio.
|
| If you were to poll ever amateur about what modes they think useless, we could
| define that all of amateur radio is useless. Not the case at all. Anything
| that an amateur radio operator does that either expands the knowledge of radio
| operations or allow them to learn something and have fun -- then it is a
| successful mode.
|
| Amateur radios greatest strength is its diversity.

It may be all of that. It is also a clever way to send more data over a smaller bandwidth that other 1200 baud methods, such
as NODEs and the like. The aprs software is easy to skip over as a novelity and merely a toy (isn't all ham radio really a
toy for big boys?), but when you get into its full capability you will see what you have been missing with a node connect.
Try it.

I don't think TNCs (or Netrom) are the way to go for networking,
especially at higher speeds and with hub nodes. I suggest use
of cheap clone PCs equipped with PI cards as the basic network
switch. Optimized versions of NOS can be used as the switch code.
That gives users the ability to use Netrom routing if they insist,
KAnode style hop by hop exploratory routing (through the BBS interface)
if they must, and of course automatic TCP/IP routing and support, all
on one inexpensive platform.

A bare bones clone can be used, no need for on-site monitor or keyboard.
And repair parts are available on every street corner. You can run off
a single floppy, but I recomend using an old cheap MFM hard drive since
they tolerate operation in unconditioned space better than the floppies.
Even a 386SX can handle 2 56 kb data streams, or up to 4 9600 baud data
streams. That should handle all but the most elaborate nodes. You can
also hang 1200 baud KISS TNCs off the serial ports for 4 more data streams.
(I don't recomend trying to use Baycom style modems on your switch
unless all you are handling are 1200 baud channels.) If you only have
one 56 kb data stream, even an old 286 system will suffice.

For radios, I recomend the WA4DSY (aka GRAPES) 56 kb RF modem, or
a TEKK KS900 fed via a G3RUH style modem for 9600 baud. At a high
RF site, cavities will be required in front of either unit to make
them live. If some of your links are stuck down on 2m, the MFJ data

radio will suffice (again with a cavity in front of it). Of course
for 1200 baud, commercial surplus radios can be used, and with
somewhat elaborate modification they can be used at 9600 baud too.

>Incorrect in that the CG input is ALSO to the Phase Modulator in standard MSTR
>IIs.....

Oops, that's right. Consulting my notes, I see that what I should have said was that you use the *temperature compensation* input (pin 4) of the Icom for direct FM. If you want to retain temperature compensation, sum the modulation with the compensation voltage using an opamp before inserting it on pin 4.

>you cannot modify the ICOMs for FM easily...best is use a MOTOROLA MICOR
>channel element meant for FM use and inject the audio into the element audio
>in (the elements are untuned and will work with the right hook up in the GEs)

An interesting idea, however you can modify the Icom rather easily. Just remove C1, and select a value for C2 that allows enough deviation. Don't forget to scale the temperature compensation voltage at the opamp input so that it still tracks if you are retaining temperature compensation. And be sure the TC line is isolated to the receive Icoms or you'll get scrambler jitter during receive (take TC for the receive Icoms before the opamp and feed the opamp output only to the transmit Icoms).

>the 9600 modem....(which is how GE gets their DIGITAL CG btw)

Like I said, you can *make* it work (sort of), but even at 3 kHz deviation
the eye is still distorted by the narrow IF filters. And I prefer using an
opamp with the proper offset to give me a DC zero center output from the
demodulator chip rather than AC coupling the signal. This will remove
most of the distortion at zero crossings of the eye. If your links have
very good SNR, you can tolerate the distortion, but at more moderate
margins you'll find the BER going through the roof.

>little problems....(Data should ALWAYS be run at less than 70 % max channel
>deviation...and since we consider 5 Khz normal for voice FM, 3 Khz works great

5 kHz is not only bad, it is illegal on 2m because the occupied bandwidth
is greater than 20 kHz. At 3.0 kHz deviation, occupied bandwidth is about
14.4 kHz, which is Ok according to the FCC, but still suffers phase distortion
in the 12.5 kHz passband of the first IF crystal filter. Dropping to 2 kHz
deviation gives you a clean eye, but SNR is of course degraded since the
FM threshold becomes practically non-existent. What you want is a first
IF filter with at least 20 kHz of passband so that the signal stays far
enough from the edges to avoid the phase distortion present there. This
will keep the rails straight and the eye open.

Phase distortion is of little consequence for voice operation, especially
considering the other audio distortion sources in the radio, but it does
matter to 9600 baud data. The factory sacrificed smooth phase response

for better adjacent channel rejection when they chose the IF filter. That was a good tradeoff for voice, but not so good for data. Like I said above, you can *make* it work if SNR margin is good enough, but if you suffer fades down to near the FM threshold from time to time, your BER will be sky high while the properly modified radio will still work quite well.

You do *NOT* need a GPS receiver to do APRS. You can type in your lat/long *by hand*. That's what many fixed station users of APRS do. You know where you are, and you aren't moving, so there's no need for a GPS. Why run APRS from a fixed location? It makes a great automatic propagation beacon. You can watch other stations pop up and disappear as the tropo changes, and they can watch you. It's also useful for spotting that Es opening, or on HF, for seeing when the MUF has moved above your frequency. If you log your spots, it can become a useful database for finding the most likely times to try a particular path. And if you are into meteor scatter, use of APRS at 9600 baud on 6 meters is a good way to see what paths are feasible (providing you can find some distant partners to work with you of course).

>Oh, btw - did someone really attach tx'ers to cows in Texas so they could
>track them using APRS, on their 400 acre farm!?!?!?!?!? I s'pose I could
>attach one to my xyl when she goes horse riding in the pine forests around
>my qth - trouble is I still couldn't find her - last time I tried, I GOT
>LOST - & I HAD A MAP!!

Well if you *did* have GPS, you would just follow the arrow symbols on the unit and go directly to the coordinates of the other unit, plus/minus 100 meters or so. The only reason you might want a map is to avoid having the GPS direct you to walk across a river. And if you store your home coordinates as a waypoint, the GPS will always lead you home too.

I don't know if you have Loran down under, but here you can use a *cheap* Loran receiver with APRS too. (Cheap is relative I guess, what with GPS receivers now available for $200 and Loran units still costing $150 or so, but you can get used units for a lot less.) I started with a $50 used Loran in the truck and moved up to a GPS later. Few intersections have signs in my area, and even though I've lived here for 30 years I still manage to get turned around or lost from time to time. With the GPS and a moving map display, that's no longer a problem. I may not know where I'm going, but I darn sure know where I am. :-)

>so I guess thats only fair :-)

I also use ZD Engineering matching transformers and recomend them highly. However, 1.5:1 really isn't a bad SWR, and as I mentioned, cutting the cable to a multiple of an (electrical) halfwave will negate any matching problem at each end. So you can use $2 worth of copper plumbing reducers and a UHF barrel fitting at each end for connectors and save $38 more bucks. Purists will cringe, and I don't do it for critical weak signal work, but it will give you acceptable performance for most things for which you'd use scrap CATV hardline (if the application is really critical, you'll use Andrew $5 a foot Heliax with $75 (each) Andrew connectors and pressure windows).

Source record: 37506

G'day again - regarding APRS! I have recevied a number of interesting E-Mails personally, & have also read with interest, the replies from members, in the digest.

To provide a bit of "light entertainment" I thought I would share my thoughts on what I have "learnt" about APRS.

From everything I have been told, it appears that APRS is a pretty typical example of one particular aspect of Amateur Radio which I sometimes find quite close to my heart - the inate (& perhaps inane) urge to do something "just to prove I can!".

Having made that comment I have to add that as much as I would like to play with APRS,
I am just a poor ham who has enough trouble justifying (to myself as well as the xyl) the strange devices which adorn my shack & my 1 acre of "down under"! I have 4 pc's in my shack, 8 tx/rx'ers, 4 scanners, 7 TV's, a couple of comms rx'ers, 2 printers and
4 satellite tv/radio receivers. Outside, I have 4 satellite dishes & 13 antennae!

The request "..darling, can I please buy a GPS receiver" would go down really well!
I am already in diabolical trouble for attempting to ascertain if 2 identical 5000 gallon corrugated iron rain water tanks, standing side by side 1 foot apart, would make some sort of usable "dipole"! (Probably make good "cavities"!). My xyl is very tolerant (most of the time) but there's a limit!

So, regrettably, I will leave APRS to those wealthy souls who can afford to play with GPS gear.

Oh, btw - did someone really attach tx'ers to cows in Texas so they could track them using APRS, on their 400 acre farm!?!?!?!?!? I s'pose I could attach one to my xyl when she goes horse riding in the pine forests around my qth - trouble is I still couldn't find her - last time I tried, I GOT LOST - & I HAD A MAP!!

Cheers de PHIL VK5HAM.

1917. Control of Packet Station

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-13 00:00:00 UTC
From: bmicales@facstaff.wisc.edu
Message-ID: <4knd8r$gaq@news.doit.wisc.edu>
Source record: 37507

Hello all,

I have been into packet for last 2 years and have a station up and running. However, this station ONLY runs when I am at home (nights and weekends) so that there is direct control over station should it be needed.

However, now I wish to leave the station on all day, seven days a week but I have no methods of remote monitoring or control of the station. I is my understanding that remote control is essential for running a station (essential in that I don't break the rules and reg).

Therefore my question is, how do the full service BBS work? Do they have remote monitiring and control of their BBS?

I have not read the digital FAQ at TAPR (that is the next stop) and I would like all the helpful comments would ne nice. Please no flames..I am a simple ham asking for help. If you can't answer without a flame, then don't answer.

Thank you and 73

Hello -
I will be setting up a portable hf station near Wateford california on
April 18th, and
19th in order to test G-tor with a military NVIS antenna system.

If you have an HF data station located within 400 miles of the
Modesto/Waterford, California area I would like to hear from you!!..

My station will consist of the following:
Sunair military HF SSB radio model GSB900DX running 50 watts
into a military NVIS antenna model AS2259/GR that has also been modified
to allow better performance on the 1.6 to 4 MHz segment.

The station will be on generator power and I also plan to leave it up and
running in an un-attended
mode on the 80 meter band with a mailbox enabled.

If you are interested in running NVIS tests with me during this time
period, please e-mail me

Sincerely,

Patricia Gibbons <wa6ube@aol.com>

Most unix programs have escape sequences that allow you to insert characters which would normally be commands to the program into the outgoing text stream. For example, here in vi I have to use the backslash as an escape to allow me to embed an @ sign in the text, otherwise just using the @ alone would delete the current line of text. Double check the minicom docs for this sort of escape sequence. For ProComm, you can change the characters assigned to commands active while in text mode from a command menu (the most common conflict is the ESC character itself). That will then allow you to insert them in the outgoing text stream. Behavior with characters like ^H and ^Y is settable on the terminal emulation setup menu.

The answer lies in 97.109e, your station may operate under *automatic control* (same as ordinary operation of a repeater, other than during phone patches) on the 6m and higher bands when using AX.25. The station must have some automatic means of limiting transmissions in case of a fault. The regular timeout timer in the TNC will serve.

Mind I ask what is "autopatch"? As for the automatic vehicle locator,
you need to get the antenna outta the car, or use plastic body panel
around the antenna (Ford's Contental use that :))..... Or the range will
be a wee bit shorter :)

>and software to implement it.

The PACSAT protocol is heavily file-transfer oriented.
It expresses its packets in terms of "file ID" and "relative position
within file".
This does not lend itself well to the purpose of sending volatile
messages that are generated over time. This was already very apparent
when the PACSAT protocol was extended to send directory information.

>2. Use a connection with real long ("never") keepalives to send the data

>up ANY bandwidth.

Of course. Keepalives are not very useful in any case.

Have you ever used one of these programs?
If you have, it will be very apparent that they will not be very
useful when using the methods that you described.
(you will end up with a lot of small files on your disk, taking a
lot of diskspace on some widely used operating systems, and no realtime
display of the DX spots)

>Having a unique PID also has a benefit. It can insure compatibility

>They can still (crudely) follow the information being broadcast.

Sure it has some benefit, but it also has the BIG disadvantage that
it cannot be supported by the existing TNC software, and forces the
users to use KISS (as with the PACSAT programs that are available).

Using KISS for AX.25 is generally not a good idea.

>The unique binary header also has a powerful advantage in that it
>can allow multiple files to be *interleaved* during broadcast.
>While the Pacsat protocol doesn't fully implement it, a priority scheme
>could be implemented where new spot download requests have first priority
>and the spot inserted anywhere in the download order without disrupting
>other downloads in progress.

There is nothing in the PACSAT protocol that precludes this.
But the simple protocol I outlined also allows it.
You can select the sequence number modulo range to define the
number of old spots that you can still retrieve.

>To fully realize the benefits of a broadcast protocol, the broadcast
>server should own the channel. Uploads, and download requests, should
>be on a different channel, IE like repeater split operation. That means
>the server can transmit continously if necessary in order to maintain
>a low latency response to user driven requests.

This has both advantages and disadvantages.
Using a split channel means that you have more bandwidth available for
the downlink, but it also means the users will operate purely-aloha
on the uplink (when they have only one receiver they can't hear eachother).

I'd say that on a low-volume downlink like a cluster it is a bad move
to go to duplex, because the downlink will not be saturated anyway
and the users will have more trouble sending the requests.
(you should operate on a PACSAT for a while and you will know what I mean).

Also, when the users don't have fullduplex capability, they will miss the
cluster's transmissions whenever they key up to send some request. This
causes them to miss some frame, and they will have to send more requests
to fill that void.

Hello,

the French PC/FlexNet Web page is now working well. Try it on :

http://www.imaginet.fr/~ferracci/flexnet

At this moment, only French information are available, but you'll soon be
able to get their English version (the pages are under-construction :-)).

At this moment, the English, French, and soon Spanish versions of the
PC/FlexNet and RMNC/FlexNet manuals are available.

PC/FlexNet now runs with multiple softwares :

. FBB 5.15c
. Dx-Net (from F5MZN)
. Clusse
. BayCom MailBox
. all softwares using the TF interface from Nord<>Link, or TFPCX.

and multiple interfaces :

. ethernet cards
. BayCom serial (1k2) and LPT modems (9k6 FSK)
. BayCom USCC cards
. Trumpet Winsock applications
. TNC-2
. KISS
. Sound Blaster cards
. DSP Starter Kit from Texas Instrument (TM)
. DG1SCR DSP card

In addition, C and Pascal interfaces are available for those of you who are
willing to program new interfaces or applications.

If you need more information, you can contact me, or FlexNet author,
DK7WJ@DB0GV.

73,

```

I'm sure someone will step in with the exact reference but the FCC has
explicit rules allowing unattended digital operation on VHF/UHF.

I'm not sure what the status is on efforts for some frequencies for
unattended HF operation.

In article <4kovoj$drf@aphex.direct.ca> wei@direct.ca writes:
>
>Mind I ask what is "autopatch"?

An autopatch is an interconnect between the public switched telephone network and an amateur radio station (usually a repeater) which then allows other amateurs to make telephone calls using their amateur equipment. It's, as Brian put it, a poor man's cellular phone, but with some pretty serious drawbacks compared to cellular phone.

As for the automatic vehicle locator,
>you need to get the antenna outta the car, or use plastic body panel
>around the antenna (Ford's Contental use that :)).... Or the range will
>be a wee bit shorter :)

If you're talking about the GPS antenna, most amateurs use the magnet mount antennas sold as optional accessories for the GPS receiver. Just plop it on the top and away you go. Of course the amateur radio antenna should be outside too so that the APRS reports of the GPS readings will be heard. That's a given, and the normal way an amateur radio would be installed in a vehicle, IE drill a hole in the center of the top, mount an amateur antenna there. Since the typical mobile amateur radio runs between 35 and 50 watts, range is quite good, and APRS systems use digital repeaters located at high points to relay these transmissions and extend the effective range even further. A well placed relay site will have a coverage radius of 60 miles, and these can be linked with other relay sites, including some operating on shortwave, to give continental or global coverage.

Wherever you go, there you are, and the whole world can potentially know about it.

Yes, I've used the Pacsat programs, and have gotten a typical 20k
of download in a single pass, which is quite a bit better than any
of the terrestrial 9600 baud systems I've accessed has delivered on
a contending MAN in a similar interval. In an era when the default
hard disk size is 1.2 Gb, I'm not going to worry about a little disk
space wasted due to inefficient file allocations. In any event it
won't be more space than is wasted on the cluster itself in holding
old spots (or maybe it is, I don't know how cluster stores old spots,
perhaps bundled into a single history file, in which case that's how
we'd be downloading it). You're right that the latest file isn't
automatically displayed by the Pacsat ground station software, but
a simple daemon running in another window can handle that.

Hrumph! Well, I don't agree with that. It sure beats the heck
out of struggling with the inane native modes supplied by the
TNC manufacturers who offer you nothing above level 2. KISS

gives *you* control at the bit level rather than being dependent
on what some other programmer thought you should have. Though I
do agree that bringing *everything*, including channel management,
inside and under your control via a PI2 card is even better. The
TNC is an obsolete paradigm.

Most users seem to operate pure aloha most of the time anyway. The
range of the node is always much greater than the range of individual
stations, so there are always hidden terminals. Since uplink volume
should be much less than downlink volume, and distributed randomly
in time, operating pure aloha on the uplink is probably fine.

>I'd say that on a low-volume downlink like a cluster it is a bad move

>causes them to miss some frame, and they will have to send more requests
>to fill that void.

Sure, but that happens on the simplex MAN too. When they're keyed up,
they can't know they are clobbering (or being clobbered by) another
transmission, and when they collide on the MAN with the server, they
kill the frame for everybody within range of their transmission. At
least when they key up on another channel, they can never clobber a
server frame. Obviously full duplex operation would be preferred, but

that's probably more than we can expect from most users unless the cluster can operate crossband. Then users can use their dualbanders to operate fulldup without rigging up two separate radios and an expensive in-band duplexer.

Once again I seem to be defending the Pacsat protocol and operating strategy more strongly than I really feel about it. I'm certain that better protocols and topologies, optimized for cluster operation, can be devised. Perhaps this contrast of philosophies has been useful in that regard by illuminating some of the potential pitfalls. If not, well nevermind. :-)

I've been thinking about getting one of the DSP starter kits, such as the
TI TCM320C2x or C5x.
Anyone else out there got one of these (or the Analog Devices, Motorola, whatever)
and care to comment on how useful it would be for basically learning some DSP
and playing with filters, DTMF recognition etc.
If there are ham users of kits out there, are there any FTP sites where
people share their efforts.

From: treed@rohan.sdsu.edu
Message-ID: <4kq0up$2uo@hole.sdsu.edu>
Source record: 37528

I've been dabbling in digital electronics lately and would like to combine it with my other favorite hobby, radio control airplanes. I've done a fair amount of work with PIC microcontrollers and I intend to record some data such as altitude, airspeed, temperature, etc. I'll probably store it in RAM and download via serial link once back on the ground.

But what I'd really like to do is establish a bidirectional link with the plane and transmit the data back in real time. I'd also like to control the plane via the data link. Traditional analog FM radios have absolutely no error checking and are very limited in the number of channels.

The speed of the link isn't terribly important. 300 bps would even do. Weight and power are factors. I'd like to keep the weight under a pound or two. Not sure about power, as long as the plane can carry the batteries to power it. And a big metal two meter antenna doesn't work so well on a plane like this, so that has to be manageable too.

Anyone have any ideas on a radio system that would meet these requirements?

Gerry,

Yes someone has. He (my apologies, I forgot his name) suggested
looking at 97.109e that does allow for for automatic control of a
station transmitting third-party traffic (in digital packet). However,
this applies only to 6 M and shorter wavelenght bands. Nothing is said
about HF packet, however, my station is operating on VHF (2 meters).

Thanks for the reply.

1941. Diode matrix problem

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-14 00:00:00 UTC
From: Mike Berg <mikeberg@willmar.com>
Message-ID: <NEWTNews.829530671.4550.mikeberg@willmar.com.willmar.com>
Source record: 37531

I recently bought a diode matrix, planning to expand my network. I find
that it doesn't seem to work between my MFJ 1270B and DRSI DPK-9600.
Has anyone gotten this combination to work using a netrix matrix?
Thanks and 73, Mike

>I have been told it can be done...?

please send me a copy, too. I would also like to know why we can't simply use
an old NE2000 card and slow it down to 2MBit/sec oder even less. I think I read
something about that on N6GN's pages, but he only that it won't work, not why.
Perhaps if we know the problem we could try thinking of a solution.
I'm also trying to think of a simple low-cost solution. GUN plexers are to
expensive and too difficult to get here in Germany, I'm currently trying to modify
old sattelite receiver LNBs to transmit. It seems as if we could pull the LO these
beasts into the ham band w/o problems. It can be modulated directly. The usuable
bandwith is about 900 KHz @ -6dB . Sure, that's not enough for 2MBit/sec but perhaps
I can do better. Suppose there was a possibility: What modem and what interface card
would I use? If I could connect the output of an arcnet card more or less directly to
the modulation input and on RX side more or less directly to the baseband output of
an old sat receiver a 10 GHz high speed link would cost effectively nothing.

Q-1. What is the maximum range?

Q-2. What is the maximum data rate?

Q-3. Why RS-232?

Q-4. Would Light be better than RF?

Q-5. What is your budget?

The first question pretty much drives the whole equation. If you want
to go 10 miles, you have a problem. If you want to go 10 feet (meters)
that's a lot easier.

You get the idea.

There are good products all over the market for 19.2 kbps full duplex
(Spread Spectrum) in the 900 MHz and 2.4 GHz bands. Then there's the
1.5 to 2.0 Mbps stuff in the 2 to 4 GHz band.

I'd recommend finding an undersized IDE hard drive someone pulled out of
a laptop. They're much more rugged than non-portable drives, and most
all of them have automatic spin/power-down capability. No need to spin
a drive that's not being accessed.

I [a rank beginner] got a TI c25 DSK; seems to be more stuff for this around than for the faster [but more complicated to program, some say] C50.
Have a look at PC-DSP. Author Oktay Alkin; may be later books, too.
Basically, some text, some programs, Gives the coefficients to make a filter, it works!

There are many other sources, I've not tried them. Some have said the ADI stuff is not as complete [a starter kit] in terms of getting something with reasonable performance to work, but better check other sources. check dsp group.....

>well on a plane like this, so that has to be manageable too.

300 bps will have about a few seconds of delay before you can send the
next command, no, it not good, I'm considering FOUR 9600bps R/F modem,
2 or T/X and 2 for R/X. the theory here is like a set of modem constantly
getting the information from the plane, and a set consantly sending control
commands to the plane, it I believe, connectionless mode. WHY the hell would
I recommand this? it because if you are using a set of modems (2), you will
need to recieve the data from the plane before you can send the command
about the control, and that creates a lot of delays. Also for good controls,
each channel will take about 8 bit, and that will take a mighty long time to
transmit over the 300bps modems.

>Anyone have any ideas on a radio system that would meet these requirements?

GRAPES modem seems to EXCEED the demand I put out, but they also EXCEED
the total $$$ I have in my bank account... how sad.... :(
GRAPES can go about 56Kbps.

My plan is a bit different from yours, I plan to build a MAMMOTH sized
coaxiel chopper. with 2 to 4 engines (single cylender, so it cheaper)
GPS, tempature sensor, altitude sensor, ground height sensor, cameras(3),
and MORE! The control *station* will have a Thrustmaster joystick, throttle,

and CH rudder! God, this gotta be fun to fly!

Feel free to E-Mail me as often as you like, I'm getting kinda bored.. :)

Thou I would agree that the protable drive are more rugged (*usually*),
that the spin down feature is not automatically enabled, you need a program
to enable the feature. I have a program that will enable this function on
non-green computers, if anyone wants it, I will send them by E-Mail using
uu/xxencode. Oh, not to worry about piracy, this is freeware.

20k? I got more like 400-500k...
Mayeb you used an omni antenna?

> In an era when the default
>hard disk size is 1.2 Gb, I'm not going to worry about a little disk
>space wasted due to inefficient file allocations.

With the OS most people use, larger disks are only worsening the problem.
When an average DX spot is like 60 characters in length, storing it in
a disk file that will take up 8-16k of disk space is not very efficient.

> In any event it
>won't be more space than is wasted on the cluster itself in holding
>old spots (or maybe it is, I don't know how cluster stores old spots,
>perhaps bundled into a single history file, in which case that's how

You can't collapse old spots in a single file only, that file will
never complete.

> You're right that the latest file isn't
>automatically displayed by the Pacsat ground station software, but
>a simple daemon running in another window can handle that.

I still think the idea of using the Pacsat software is *very artificial*
and not a good way of introducing a new protocol to a community that
itself is not interested in improved efficiency but may take part when
it does not make operation less convenient.

>>Using KISS for AX.25 is generally not a good idea.

>Hrumph! Well, I don't agree with that. It sure beats the heck
>out of struggling with the inane native modes supplied by the
>TNC manufacturers who offer you nothing above level 2. KISS
>gives *you* control at the bit level rather than being dependent
>on what some other programmer thought you should have.

Big disadvantages of KISS:

- no checksumming of the PC-TNC link, thus only reliable for protocols
that include a checksum in their own data (like TCP/IP. note that the

PACSAT protocols include an internal CRC for the same reason)

- loss of control over the transmit queue. the application on the PC
does not know if a packet it has sent to the TNC actually got sent,
and thus it is tempted to send a retry even before the original
packet got sent

The first problem has been addressed by a few checksumming proposals,
all mutually incompatible.
The second is usually ignored. It results in very inefficient operation,
and sometimes even congestion collapse, on busy channels.

>Though I
>do agree that bringing *everything*, including channel management,
>inside and under your control via a PI2 card is even better. The
>TNC is an obsolete paradigm.

Any SCC card is better than a (KISS) TNC. But it does not look like
the TNC is going away from the average amateur shack, and any protocol
that does not work well on it is doomed to fail.

>Most users seem to operate pure aloha most of the time anyway. The
>range of the node is always much greater than the range of individual
>stations, so there are always hidden terminals.

This would normally not be true for a duplex repeater setup. Having
the transmitter keyed all the time (to broadcast information) is what
kills it.

>Since uplink volume
>should be much less than downlink volume, and distributed randomly
>in time, operating pure aloha on the uplink is probably fine.

Uplink info is *not* distributed randomly, because it gets synchronized
to the downlink stream.
Look at the pacsats: when they transmit a queue status packet, the
users key up to send their download requests. There is a small random
delay, but there still is a large peak in traffic just after the
queue status and thus a large number of collisions.
A similar situation will occur in the cluster system when a packet has
been lost due to some external interference (collision, QRM/QRN, etc):
all users will want to request a retransmission of that packet.

>>Also, when the users don't have fullduplex capability, they will miss the
>>cluster's transmissions whenever they key up to send some request. This
>>causes them to miss some frame, and they will have to send more requests
>>to fill that void.

>Sure, but that happens on the simplex MAN too. When they're keyed up,
>they can't know they are clobbering (or being clobbered by) another
>transmission, and when they collide on the MAN with the server, they
>kill the frame for everybody within range of their transmission. At
>least when they key up on another channel, they can never clobber a

>server frame.

Collisions are (in a reasonably working LAN) a random occurence. When
you have systematic collisions the operation area has to be smaller.
However, in a "fullduplex broadcast" environment, keying up causes
a systematic loss of information. This must not be designed into
a new protocol.

>Obviously full duplex operation would be preferred, but
>that's probably more than we can expect from most users unless the
>cluster can operate crossband. Then users can use their dualbanders
>to operate fulldup without rigging up two separate radios and an
>expensive in-band duplexer.

When designing a new system for wide use by radio amateurs, the first
priority should be to make it affordable to the average amateur.
Your system may be better in theory, but it will still fail in practice
because the average ham is not prepared to build or buy the required
equipment.

>Once again I seem to be defending the Pacsat protocol and operating
>strategy more strongly than I really feel about it. I'm certain that
>better protocols and topologies, optimized for cluster operation, can
>be devised. Perhaps this contrast of philosophies has been useful in
>that regard by illuminating some of the potential pitfalls.

Indeed...
From the first time I worked with the Pacsat protocols (I have written
the first independent implementation working from the documents released
when the first sats were launched), my opinion has been that it was a
very nice idea but a few crucial details were not designed well.
One of these was the poor layering of the protocols, which made each of
the layers very dependent on all the others, and the entire stack
completely oriented towards file transfer.
It was a good effort and it has certainly provided a lot of experience
with the matter, but I don't think it is a good idea to "force" it into
uses that are too incompatible with its original purpose.

When you (or better: anyone) want to experiment with these protocols,
I think it is better to try to use them on a BBS system, where the
files are fixed and read by many users at about the same time.
I think there already are some experiments going on in this area.

I have the C50 SDK and although there appears to be a great deal of software out there for "free" I would recommend that you get the Analog Devices 21xx EZ-kit. The TI SDK will only digitize one channel up to 9600 sps while the AD or even the Motorola SDKs will do stereo at 44.1 ksps. I will be replacing my TI for the AD.

If you still decide to go with TI, I am willing to part with my minimally used C50 Kit with all the books etc. for $75 delivered COD.

Hello,

We are desperately in need of 10.7MHz ceramic filters. The
most popular seems to be the SFE10.7 MA5-Z from Murata. These
are the recommended part numbers.
If you can help, please do. We only need 5-10.

Jake

> Puget Sound region - I have already found a list of repeaters used for
> TCP/IP traffic.

I'm not aware of a list, but most areas have some packet on 145.010, .030, .050, .070 or .090 MHz. The "standard" frequency for packet has usually been .01, but over time, activity has drifted from there. Still, it's a start.

Most packet repeaters are high-speed links (9600+) and are not on 2m.

Also, APRS activity seems to be growing on 145.790. Here in the Denver area, that frequency also supports our HF<>VHF gateways.

Hope this helps.

>people share their efforts.

Pete, I have the Analog Devices EZ-KIT. It's great for the kind of
experimenting you want to do. I also found a sound card with a
TMS320C25 on it (branded IBM but actually manufactured by Tecmar)
at a local surplus store. I was amazed to find it has an excellent
programming reference included. I haven't done too much with it
yet, but I have worked quite a bit with the EZ-KIT. I haven't
sprung for a C compiler for either of them yet, so I've been doing
assembly, and the Analog Devices assembly language is easy to learn
and use. I'm still struggling to master TMS320C25 assembly language.

TAPR runs some mailing lists that may be of interest to you. I've
found reading the HF SIG enlightening (I'm mostly interested in
low speed data on a noisy and fading channel).

Gary

The FCC recently allowed unattended HF data operation on a limited subset of the HF data frequencies. I've got the notice around here somewhere. It hasn't made it into the latest printed copy of Part 97 yet.

The problems are: patches are half-duplex, which can disconcert non-
amateurs on the other end of the connection, there are content
restrictions on what you can say and discuss due to the use of
amateur radio, and there generally is no reverse capability, IE
you can make calls, but others can't call you from the phone side.
Most patches also have toll restriction, so no long distance calls.
Of course you can almost guarantee that other amateurs will be
listening in too.

>>As for the automatic vehicle locator,

There are other ways, though not as good. You can fender mount, or
trunk lid mount, or bumper mount, or even use a (gag) thru-the-glass
mount on a window or windshield. You can use a magnet mount too.

>>there. Since the typical mobile amateur radio runs between 35 and

>60 miles are QUITE nice, now the problem might be getting the map part to
>work......

That's a 60 mile *radius*, actual distance between stations could be up
to twice that. (Or half that, it depends on the location of the relay
site.) There is now a fairly large database of APRS maps, and the
program allows you to generate your own maps to any level of detail
required (within reason, there's a limit on the number of vectors
you can have in one map, but the maps can be made to cascade as you
move and zoom the display so that limit isn't very important in
practice).

>>can be linked with other relay sites, including some operating
>>on shortwave, to give continental or global coverage.
>
>So APRS to GPS is kinda like Fido-net to Internet? (Y/n) ? ;>

Yes in a way. The relay sites operate in realtime, so it is
more like the internet than fidonet. The vehicle broadcasts
its location (derived from the on-board GPS receiver), and
the relay sites pass along those broadcasts as quickly as they
receive them. (There is some latency at each site, since it must
receive the complete position report before echoing it, but since
the reports are short, one line, the latency is not large.)
Things can bog down, of course, if many stations are attempting
to use the same relay sites to report their position. This is
typical packet behavior on simplex MANs.

> - Brian

That's probably a good suggestion, Brian. We've been using the
old 5 inch MFM drives because they were free, and because there's
a greater tolerance for expansion and contraction due to temperature
changes than with the tiny higher density drives. But laptops seem
to work Ok with the tiny drives, so maybe that's a non-problem
given embedded servo tracks.

Floppies are definite bad news, however. The oxide tends to peel
off the diskettes due to the temperature extremes at our sites
(ranging from -5F to +140F).

There is a program called RXCLUSTR written by a Swiss SWL I believe that monitors a Cluster frequency and grabs all the spots, displaying them and storing them away. This solves the problem of not having to be connected to get DX spots. However you can't submit any spots. I got the program from one of the major FTP sites, maybe UCSD.

The best solution would be to come up with new Cluster software to implement a high level protocol to get rid of the inefficient channel usage. The problem is that so many users out there are just using a dumb terminal!

Source record: 37601

Recently I became interested in chatting with other folks about various aspects of amateur radio and digital communications. My teenage daughter, N0OWM, is interested in chatting with other teens. We have access to the Internet both by Amateur Radio (a local gateway) and via an account with a local ISP. After a little research, confusion resulted. Maybe you can set us straight....

1. Is there a difference between CHAT of JNOS and the so-called converse nodes? Are they the same as IRCs?

2. How can available IRC servers that specialize in special interests be identified and how can channel numbers be determined? Can anyone point to some good IRC servers for amateur radio and teens?

3. There is some special client software available for Windows. It it necessary or can I simple TELNET to a particular server and channel?

In advance, I thank you for your suggestions.

I agree with Gary, the Analog Devices assembly language is easier to learn. AD uses "an algebraic syntax for readability and ease of coding" (a quote from AD). So, for example, instead of using some MOV command, you use an assignement with an equal sign (AX0 = I4).

The EZKIT Lite does NOT come with a programming manual. You will have to order "ADSP-2100 Family Users Manual" (free) from Analog Devices. Another handy, but not required, book is "Digital Signal Processing in VSLI" by Richard J. Higgins. This latter book is a good DSP reference as well.

Two other handy books by AD are "Digital Signal Processing Applications Using the ADSP-2100 Family, Vols 1 and 2". These books contain some applications for the 21xx.

Analog has a web page http://www.analog.com. In the support section there is lot of useful info and samples. I used their sample of the optimized decimation in time FFT (with some modification) in a spectral analysis project for a DSP class.

Oh, and one more thing, AD does NOT give you a decent debugger with the EZKIT Lite. But what they do give you is a pretty nice simulator that will run on a PC. I managed to debug the FFT using the simulator. After that I was able to use the few real time tools that they do give you to debug the software on the board.

It would be nice if there were some Ham applications for this board.

CUL,

Smitty, NA5K

1965. PSE help about HF data-comms

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-15 00:00:00 UTC
From: Carlo Fonda <cfonda@ictp.trieste.it>
Message-ID: <317270B1.5DC9@ictp.trieste.it>
Source record: 37605

Hi to everybody and thanks to read this posting!
I'm Carlo IW3RJC from Italy and I'm searching any possible information about protocols, equipments, hints etc. etc. for digital communications in HF.
Let me give more details: I'm a physics student working on a research project on digital links using HF (not ham-bands) to connect remote sites to Internet (mainly academic and research institutes in developing countries) and I will know if any hams has experienced this possibilities:
- HF digital links faster than 1200 bps (It's VERY hard, I know... ;->);
- systems for automatic band selection, depending on propagation;
- protocols for 'incapsulate' TCP/IP on a HF digital link (other than AX-25);
- full-duplex HF links for long distances;
I'm also searching for any hints about *good* and *quite unexpensive* stuff (radios, modems, control equipment, antennas, etc.) for developing two 'test sites' (I think one here in Italy and one in Peru, but it's not yet fixed):
I think hams are *good* testers for this equpments and their judgements are better than all commercial advertising I've seen in my net-search about this argument! ;-)
So I thank anyone would help me in my search: please reply me directly to my e-address cfonda@ictp.trieste.it , I won't create 'chaos' in this newsgroup!
Last thing: my english is *quite* poor, I know, please excuse me ! ;-}

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

I've got one of the Analog Devices EZ-KIT LITEs, and am very pleased
with it. It should run all the software in the ADI applications books,
which includes filters, DTMF, etc. It has a 33 MIPS ADSP-2181 with
plenty of on-chip RAM, and a stereo CODEC. One's own code can be put
into EPROM and used to replace the monitor code. All the bus signals are
brought out to two 50-pin headers (you have to solder your own in,
though). It's very good value.

Well, several of you have said it, but I will put in my $0.02 worth: The Analog Devices EZ-Kit
Lite will probably be your best bet. TI's board only has one I/O channel, while the EZ-Kit Lite
has stereo I/O. Also ADI's assembler is so easy to use that it doesn't seem like assembler.
All the stuff is there to write your own proms to if you make something neat with the board.
(save of course for the actual prom programmer).

One more vote for ADI.

What about your own site that use digital connectionless link? 4 GRAPES
modem, will deliver sound quality that's as close to CD as you can ever get
on a ear-plug. :) and with digital transmission, they will have a harder time
decoding and listen in... Thou that ought cost a couple thousand bux min....

>>DRILL A HOLE? Nooo, not on my car, Nooo.. :) Hummm, when I finally
>>get MY car, maybe I will try to using all the pre-drilled holes I can....

>practice).

Hummm, I think I saw something like that on Beyond 2000 (Australlian
TV show, broadcasted in Canada, and maybe US). I suspect that they
use APRS because they did NOT use the buzzing word.. "GPS" and
the map... ugh... is very vetorized, very few vector too... :)
Next time, I will have autoCad onboard to model the entire road for me :)
or Just bring alone a ONYX to ensure speedy update and accurate model
generation :)

I've worked with both the Analog Devices and the Texas Instruments DSP products.
In terms of real-life application development, there is no question that the Analog Devices performance is better (IMHO). However, if you are strictly interested in _learning_ DSP theory and operation, I feel that the Texas Instruments DSK is the best way to go.
I am currently using the TMS320C5x DSK for a ham radio application. I am trying to develop a stand-alone packet controller (including AX.25, P-CSMA, modem, and error checking/recovery functions) Due to limitations on the DSP, most of the non-time-critical stuff will probably end up in the PC application S/W.
TI offers excellent user support, and it's _FREE_. Analog Devices only gives you the time of day if you promise them a 20k units/year production order. Also, most of their documentation comes at a steep price, unless you are really into downloading everything from the network.
For functionality and operation, the AD2100 family kicks the TMS320 family's butt. But for user support and development, TI is the good-guy in town.

Also, don't forget the big questions when choosing a platform:
Cost?
Performance?
Functionality?
Compatibility?
Reuse?
Reliability?
.
.
.
etc.

Universal Radio M-8000v5 Communications Terminal/Decoder
for serious HF, VHF/UHF monitoring!

Provides decoding and video output to VGA monitor using
it's own, internal processor! No computer required.

The decoder includes the following capabilities:

Morse Code (CW), Baudot, RTTY, ASCII, Packet, PACTOR, Simplex
Telex Over Radio (SITOR), simplex and duplex ARQ and FEC codes,
PICCOLO code, ACARS, POSAG and GOLAY pager codes, and
Facsimile (FAX) images, and WFAX (Weather FAX)!

Includes VGA Color monitor port, printer port, AUX port,
and two audio source inputs!

This is the latest version currently sold by Universal
Radio! List price: $1,499.00, Discounted at: $1,349.00

I recently lost my job and need some fast cash, will sacrafice
for only: $800.00

> Dave W7RSJ

You are in luck - the TS440 doesn't need any modification for FSK. The
FSK-T and FSK-R data lines appear on the 13 pin plug on the back, along
with the analog connections needed for AFSK keying in the "FSK" mode.
That plug is a bear to find and to solder, but the results on FSK are
fantastic.

Now, if you can, return the favor. Please tell us how to fudge the
internal microprocessor so I can select the 250 Hz 455CW-N filter for CW
and still have the 500 Hz 455CW on FSK mode.

Hi,

I've just started to use my KPC-9612 with an ft-207R it works fine in the 'normal' mode, but if I put it into kiss (and then use BPQ), no signals are decoded......

I have also found that if I return it to the 'standard' mode will a signal is being recivied then the 'mush' dissapears and in it's place is a nice clean signal .... Any one got any ideas ?????

A3 - [Tonga] From 3 to 8 of May , Michael (DF8AN) should be active from

Tonga.Activity on 40, 15 and 6 mtrs CW (QRP 5 Watt).

CT1_dip - [Portugal] A group of CT operators plans to be QRV from the Aveiro

Lighthouse (DFP Ref. FBL-001) and from some Islands in the Beira

Litoral group.The callsigns should be homecall/p.More info soon !

CT8_dfp - [Portugal] The CT1FMX dxpedition to "Ponta da Piedade" LightHouse

was changed for the period 24 to 26 of May.Call stills CT8FMX.

On the return , CT1FMX expects to activate "Forte do Pessegueiro"

(Ref. DCFP F-042)

CU4_dfp - [Azores] CU4AH will sign portable from "Ponta Barca" Lighthouse (DFP FAZ-003) located in the Graciosa Island (DIP AZ-004). Starting 3rd of May for three days. Frequencies : 14180, 14260, 7060, 3680, 3790.

EK - [Armenia] Victor ,RV6HKB/EK, will be QRV from Armenia for 1 year. He will be on 15, 20 and 40 meters with a dipole and 100 Watts.

F_iota - [Noirmoutier EU-064] F/ON5UP/P is active until April 20th from Noirmoutier Island (IOTA EU-064). Every day from 7 to 9 UTC on 7.030 Mhz.

GJ_iota - [Les Minquiers EU-099] Jim (G3RTE) and Phil (G3SWH) will be Les Minquiers Plateau (EU-099) with calls GJ3RTE/P (SSB) and GJ3SWH/P (CW).They plan to have two stations running at same time. QRV from June 28th to July 1st.

GM_iota - [Benbecula EU-010] From 23 to 30 of July , Ken (G0PCA), Eileen (G0PCB), Ian (G0MIF), Stuart (G7JYF), Kurt (G7NCV), Debbie (G7UWH) and Katie (2E1DQA) will be active from Benbecula, Outer Hebrides IOTA EU-010 with the call GM0PC.

HC8 - [Galapagos] Starting April 21st to May 10th , DF1VU ,DL4VCG and DK5VP will sign portable HC8 (e.g. DF1VU/HC8) using 700 W and two Yagis.QRV from 10 to 40 meters between 14 and 18 UTC.

HH_iota - [Ile a Vache NA-149] HH6JH is living in this Island.He is QRV at sundays on 14.260 Mhz.QSL via home call.

HI - [Dominican Rep.] K9LTN/HI9 (Bob) is active until the end of April. He is QRV in all bands , SSB + CW.

J6, J7 - [Dominica & St.Lucia] During April , F5JYD will be in Dominica and St. Lucia where he plans to be QRV.

JA6_iota- [Tsushima AS-036] In the last week of April , JA6WIE will be QRV from Tsushima Island (IOTA AS-036) , also from this group , 5 to 7 of May JR0GFM will be QRV.

KH4 - [Midway] NH6D/KH4 (Bill) will be active again for two weeks from

Midway (Top #1 in the Portuguese Most-Wanted).

SV5_iota- [Kalymnos & Telendos & Leros EU-001] From May 25th to June 14th, Fred, SV5/SM7DAY/QRP.Activity only on 17 and 20 mtrs CW.

TJ - [Cameroon] Two US operators will be QRV using call TJ1GB. SSB + CW QSL via WA6SLO.

UA_ant - [Antartic] Starting July , RU1ZC will be in SAAM Mirny (Antartic Base WABA UA-07) for three months, as R1ANZ.QSL via RU1ZC.

V7_iota - [Marshall Isl.] From 2 to 14 of May , WW1V (Bob) will be in Kwajalein Atoll (IOTA OC-028) as V73W.

VE_IOTA - [Seal NA-126] Some operators of the Montreal West Island Amateur Radio Club plan to be active , July 25th to August 1st, from Seal Island (IOTA NA-126).Some VHF activity , see below !

VK_iota - [Croker IOTA New-one] The VK8NSB activity from Crocker Island was changed the period 8 to 14 of August.

VK9_iota- [Saumarez Reef OC New-one] VK4FW/9 (Bill) is going to Saumarez Reef , New one for IOTA , from 27 to 28 of April.

VK9_wpx - [Norfolk] Jim (VK9NS) and Kirsty (VK9NL) will use the special calls VI9NS and VI9NL during the 75th Anniversary of the "Royal Australian Air Force".

VP8_sg - [South Georgia] Reg (VP8BPZ/GW8VHI/DA4RG) plans to be active from South Georgia during is Dxpedition to the Falklands (11-May to 11-September).

VP9 - [Bermuda] From 9 to 15 of June , N1LJA/VP9 (Paul) will be QRV on 10 to 40 mtrs.

W6_iota - [San Miguel NA-144] Jim (KG6VI), Steve (N6WKU), John (KO6TN), Frank (N6RNX) and other operators will be active from San Miguel Island (IOTA NA-144).They will be there from 26 to 29 July , also for the IOTA Contest.

YB8_iota- [Tongian OC New-one] John , YB5NOF , will be at Tongian Island on April 26th.The callsign is going to be YB5NOF/8.

ZB2 - [Gibraltar] ZB2/DL7CM (Hans) and ZB2/DL1BX will be active from 10

to 20 of May.Also until 1st of May ZB2FX (G3RFX) , QSL to H.C.

7X_iota - [Algeria] Possible operation of W3GF from two new Refs for IOTA.

(24 to 27 of April)

8P - [Barbados] From April 24th to May 6th , DJ1TO (Bernd), DL7UTO

(Baerbel) will sign 8P9IR and 8P9IU.

8Q - [Maldives] From September 8th to 22nd , Andy (G4VPM) will sign

8Q7PM.

9K_iota - [Persian Gulf Group AS-118] Dave (KA5TQF) will be on Kuwait until

May as 9K5/KA5TQF.It is possible that he operates from IOTA AS-118

group on April 25th.

9L - [Sierra Leone] Starting May/June , Paul (9L1PG) and Millie (9L1MG)

will be QRV from Sierra Lione.QSL via NW8F.

9M2_iota- [Pinang state Group AS-015] From April 23rd to May 5th , Steve

G4JVG/P29DX will be QRV from Pinang State group (IOTA AS-015).

He will sign 9M2/G4JVG

=== * VHF * ===

VA7 - [Canada] The Mountain DX Club of Port Coquitlam is preparing a DX

expedition the 8,000 ft peak of Blackcomb Mtn (at Whistler ,

British Colombia) for the CQ WW VHF Contest this year.

They plan to be QRV on 6 mtrs , 2 mtrs and 70 cm running 100 W and

longboom yagis.The grid square is CO80 .The callsing will be , if

approved , VA7SKI .If the callsign is not approved they will use

VE7VDX.Any more information , skeds request ... to Scott Leaf :

ve7zvz@dowco.com (Internet email).

VE_IOTA - [Seal NA-126] Some Trans-atlantic QSOs are expected in the 2 mtrs

band (144.020 and 144.030 Mhz). [More info on VHF]

NPDXG Bulletin #16 [2/3]

NPDXG Portuguese edition -> The last numbers of our bulletin were not

translated to Portuguese due to an health problem of Pedro CT1FUF.
The Paper version is being prepared and delivered at time but the digital version is not.We hope Pedro gets better soon and that the bulletin starts to be translated to our mother language for CT and PY readers.
First year of NPDXG activity -> Our DX group is making it's first year ,next April 25th.We expect our work to help the DX comunity was useful , some of our activities were :
- DXpedition to Insua Island , IOTA EU-150
- DXpedition to Morraceira Island , DIP BL-013
- DXpedition to Culatra Island , IOTA EU-145
- Colaboration in some CO (Cuba) Dxpeditions by, CT1EEB and CT1ESO.
- Participation in several DX contests in HF and VHF (By our VHF group)
- Activation of some "rare" QTH Locators for VHF-hunters.
- Edition of an regular DX information Bulletin in Portuguese and English, with an paper version for those without packet radio or Internet account.
- Instalation of the 2nd DX Cluster node in Portugal linked to the European Packet Cluster Network.The call is CS1NDX-5 and it's working in our Club. Thanks to CT1EKF and NPDXG members in Oliveira de Azemeis for their help, also to CT4KQ.
- Cooperation with some magazines and RadioAmateur Clubs and Associations.
- Organization of meetings between DX'ers in CT-land , especially in the Aveiro District.
We hope to organize even more events. All this for a better hobby, HamRadio!
73's to our readers ...
9K5 Prefix -> From April 7th to May 7th , Kuwait operators are allowed to use this prefix.A special QSL card will be used for this event.

>
>Weird, is GPS related to APRS? from all I read here, it don't seems to
>be, so why????.... And how accurate is APRS? 1 metre? sub metre? 1 cm?
>sub-cm? 1 Micron? Sub Micron? :)

Hmmm. You seem to have not been paying attention along there somewhere.
APRS is only a position *reporting* system. The position it reports is
taken from a GPS receiver in the vehicle.

1987. Digital radio at NetMedia 96

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-16 00:00:00 UTC
From: Milverton Wallace <m.s.wallace@city.ac.uk>
Message-ID: <4l11nm$gmr@bambam.soi.city.ac.uk>
Source record: 37627

This year's NetMedia conference (London, 4/5 July) on the Media and the Internet features an outstanding forum on Digital Radio.

Here's the speaker line-up and topics:

1) Where we are now in Digital Audio Broadcasting Eugene S. Reich, Director of Sales & Programming,WorldSpace

2) Research and development of DAB systems in Europe Hans Bakhuizen, Technical Policy Advisor, Radio Netherlands

3) Worldwide implementation plans for digital radio Glyn Jones, Managing Editor, BBC Digital Radio

4) Recent developments in digital radio receivers
Dr Thomas Lauterbach, Promotion Engineer, Eureka 147 DAB Promotion Group

5) Real Audio and Internet radio Erik Lundberg, Director of Advertising,
Web Review

An application form and full details of the conference are available on our Web site at<http://web.soi.city.ac.uk/conference/netmedia/96.html>.

NetMedia 96 is sponsored by Digital, Microsoft, Logica, NEC, Attachmate Internet Product Group, News Datacom, Mirror Group Newspapers and Unipalm Pipex.

For a printed application form and further information contact:

1988. Why can't users telnet under TNOS?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-16 00:00:00 UTC
From: chris@kd3bj.ampr.org
Message-ID: <chris.829688110@kd3bj.ampr.org>
Source record: 37628

I'm running a recent TNOS on Linux. Users that connect via Ax25 can't telnet even though (I think) they should have permission (set in ftpusers?)

I'm sure this a known feature. Can someone enlighten me to its purpose? I'd like to allow ax25 users access to various hosts on my network and this feature is preventing me.

There also seems to be a whole slew of ways to connect to TNOS, each with slightly different behaviors, permissions, and semantics. Is this so, or is it just me? And is there anywhere a description of the different ways to connect to a NOS/JNOS/TNOS system and the associated quirks/features?

Richard G. Jean Jr. wrote:
>
> Here are a few uses for APRS:
>
> Marathons (tracking runners, ambulances, etc.)

Yeah, right. I think the conversation would go like this, "Hello, Mr./Ms. Marathon Runner? Would
you mind strapping on this little pack so we can track you in the race? How much does it weigh?
Oh, not that much, say a pound or two for the transceiver, another pound for the TNC, and the GPS
only a pound and a half or so, not counting cables, batteries, antennas, etc. Oh yes, speaking of
antennas, you'll need to wear the GPS antenna on your head so it can get a good lock on the satalite,
and do try to keep that 2m antenna vertical. What was that? You want me to stick the pack, WHERE?!"

I think not. Where ever ounce counts, where even wind resistence matters, it isn't going to happen. Then
there's the little matter of cost. ~ $200 for Xceiver, $100 for APRS ready TNC, $200 for GPS (more like
300), but let's say $500 for the whole package. Now, times every participant, let's see, we have a big
canoe race here every year, lets use that for an example. There's regularly a 1000 (more or less) canoes
in the race, so that would be $500 x 1000 = $500,000. NOT!

Ambulances, maybe. But then again, I'll trust that the driver *knows* where they're going. The "etc."?
You mean like spotter points (portages) and such. Last time I looked, 5th and Main St. is where the
map says it is, which is pretty much where the City's fore-fathers planned it 150 years ago, and its still
not moving (especially at rush hour).

> Sky Warn (tracking of reported hazardous weather, and the spotters that make these reports)

O.K. I can buy this.

> Weather Ballons (track and finding weather experiments)

Let's see, at $500 pop... not *my* equipment, *thank you*, and don't say "POP"!! Otherwise, this would

be pretty cool to monitor, from the ground, that is. ;-)

> Car theft (be nice to know where your car (FULL OF RADIOS) is off to....)

Can you say Lojack? Good, I knew you could. Besides, what do you suppose the *first* thing(s) to be
subtracted from the car are going to be? And you assume they'll take the car and not just the stuff.

> Weather (APRS has the capability to display current weather if the station is equiped with
> a weather station.

O.K.

>
> Some areas have alot of mobile activity and it can be fun watching where they are going...

That's one of the things that bothers me about APRS, just how much activity can the system take before
the thing locks up due to too many stations? There's gotta be a number, that when hit, there's too much
traffic for the system to handle.

>
> Give it a try, think your be pleasantly surprised.....

I would, but I'm still waiting for a version that will (could) use more than 256K on my DOS based
machine, ie. be *Windows* (3.1, at this time) based (look/act more like the Mac interface), use *my*
mouse driver and com settings, thank you very much, and not be told that because a ham uses a Intel
(DOS/Win) platform, he's cheap and doesn't deserve a program that can go past CGA video standards.
Last time I checked, a 486DX4-120 wasn't pocket change (not to mention a P133), nor was a decent 2m
or HF rig (you price a FT-1000 lately?) I know, sour grapes from a few years back, but still.
I see MacAPRS for Windows is coming out at Dayton, the current version doesn't work with 3.1, just
NT and Win95. I wonder about us cheap hams that don't run NT or Win95. :-(

there will be some packet bbs or node on at least one of these freqs.
Make sure you have the TNC set for MONitor ON and watch the screen for
callsigns or aliases to connect to. Once you make a few local connects
you will find out what other frequencies are in use in your area.

All the TCP/IP stations here in the Seattle area support AX.25
connections too. Feel free to use them and connect via them to
explore the local network. Several of the stations provide gateway
capability to the local TheNET network. On two meters, you'll find
that all odd pairs from 144.91 to 145.09 are used for packet. Also,
as far as I'm aware, DX packet cluster activities are all in the
145.7x region.

Hope that helps, and 73

Bob, KD7NM

Thanks all. I found that local freqs go down to 144.990. I've managed to
reach a couple of TheNet nodes, although receive error rates from one are
pretty high.
At least that's what the sysop said, I just found the traffic very slow!
How does one determine error rates from the TNC (KPC-3) or the TheNet node
one is connected to?

THE TCP'er

April 1996

We're back - and you're invited to a meeting on April 20!

Yes, it's true: like the swallows to Capistrano, like King Kong to the Empire State Building, like a tax collector - sooner or later, you knew The TCP'er would grace your mailbox again. The NETCPA has been reorganized, and is once again ready to serve you.

The monthly meeting of the NETCPA Board will be in Newington, New Hampshire, and will feature a demonstration of 9600 baud packet operation by Gary Grebus, K8LT, and a TNC clinic where you can check your deviation!.

Directions: Talk in 147.00 (PLUS OR MINUS 600). (THERE ARE RECEIVERS ON BOTH FREQUENCIES)

>From Bosotn: take I-95 Northbound. There's a $1.00 toll soon after you enter New Hampshire. After the toll booth, get ready for a LEFT exit. Take Exit 4 (labeled White Mountains). This will put you on to Rt 16, the Spaulding Turnpike. Take the first exit that you come to: It will be Gosling Road. At the bottom of the ramp, turn right. You sould see a McDonald's ahead on the left. Continue straight and cross a major intersection. You will see smokestacks and High Tension lines ahead on the left. Go past the stores, down a dip and at the top of the dip there will be several driveways on the left which lead to the Seabrook power plant. Take the first driveway. The building will be ahead on the right, parking is on the left.

WA1PHY Station Configuration

by "DoC" Willard, W1EO

The WA1PHY Packet Radio station provides gateway translation of messages between the AX.25 W0RLI and the TCPIP worlds. The AX.25 station has:

* An 80386 33 MHz computer
* Runs five windows of W0RLI Mailbox under G8BPQ "TheNode"
software, using TNCs in KISS mode.
* The Mailbox ports use the callsign WA1PHY. TheNode callsign
is BED/WA1PHY-3.
* Two radios, two TNCs, & two antennas.
* First is running 45 watts on 145.750 Mhz and a colinear at
120 feet
* Second is running 20 watts on the 220 MHz backbone channel,
sharing tri-band colinear.

The The tcp/ip station has:

* An 80286 12 Mhz PC
* Runs NOS tcp/ip software, using a TNC in KISS mode
* The NOS software (currently JNOS110m) serves as a smtp
message station as well as an inter-LAN switch. It also
provides POP3 and NNTP service.
* The NOS port uses the callsign WA1PHY-6. Its address is
switch.bedford [44.56.4.1].
* The CONVERS channel on 145.51 Mhz uses the callsign wa1phy-9.
* Two radios, two TNC's, and a triband colinear at 70 feet.
* First radio is running 20 watts on 145.510 Mhz
* The second radio connects to the NIL repeater on 440 as a
backbone to the tcp/ip network.

The two computers forward message between them via a NetROM slip
link.

Addressing messages:

* TCP/IP to AX.25: message should be addressed to
"W1xxx%K1yyy@switch.bedford".
* AX.25 station to TCPIP: station: message should be entered
into the Mailbox on 145.750 using the WA1PHY callsign. These
messages should either be addressed to one of the specially
translated stations such as "SP KA1MF" or "SP W1IMM" or to a
tcpip host as "SP W1xx@w1yy.ampr.org". Each of these messages
will be forwarded to the tcpip computer for delivery.

```

Personalized JNOS

Tom Saluti, N1KIO

For those that would like a Personalized Version of either JNOS110m or JNOS110m/NNNax, I would be more then glad to compile for you for the increadable price of $0.00 . Such a Deal !!

The NNNax version has Marks (ka1nnn) mods for domain as well as all the other mods he made. (I'll even include his docs in the deal).

In the personalized versions, you will get what ever features that you want, and I will remove <sysop>: in look and replace it with your name instead; the same for the busy message in the mailbox. (telnet to n1kio-1 and see what it looks like).

To get this, I will need a config.h or list of features that you would like compiled in. You will need to mail me a SASE mailer and 1 1.44 disk or 2 5 1/4 disks, if your not local on the NEDA Network (FTP to Mass and south is almost impossiable for such a big program) ;-(. You may send smtp to me with your request and I will smtp a config.h for you to edit.

Please mail the disks and mailer to:

editorial
THE NEED FOR SPEED

Bill Horne, AA1ES
Acting Editor

There's a funny thing about technology: like wine, or sourdough, or politics - things only happen when the time is right. It's been a long time since we started in tcp/ip, but I think the moment has arrived for improvements to our network.

People are, as my dad used to say, funny: sometimes we can't change until someone else shows us that it's possible. Of course, it's wise not to jump on every bandwagon - but the push for more throughput in the tcp/ip amprnet has become a juggernaut that we neither could nor should avoid.

Amateur packet radio has had a short, and uneven, history of growth. As with other technologies, we've built on what was available and proven: sometimes with mixed success. The AX.25 protocol was designed to provide AMSAT ground controllers with a data path to the OSCAR satellites. For OSCAR, AX.25 worked well - but when interest in data transmission reached critical mass in the eighties, AX.25 was pressed into a service it was never intended for. If we are to enjoy the kind of transmission rates that we all take for granted in our work environments, we must be willing to change every aspect of our network: the protocol, the speed, the software - and ourselves.

Unlike spring cleaning, some things can't be put off. In our personal lives, we might relegate our old shirts to the back of the closet, or separate them into "Loose enough for a tie", "OK for casual day", or even "Use for painting"; we can adjust our belts and our buying habits and even our choice of internists: but sooner or later, we must look in the mirror and face the fact that our network has gotten fat and slow. The electronic arteries that are the lifeblood of tcp/ip are clogged, and it's time for us to exercise our minds and start a diet of hard work.

It's time to get up to speed with the commercial world!

We can, indeed we must, raise the standards for our backbones and our stations. If we in New England content ourselves with 1200 bps links, we will find ourselves more and more isolated from the rest of the network. Other amateurs have shown the way: in Connecticut, 9600 bps user ports are routine. German enthusiasts devised and implemented the DAMA protocol, which dramatically increases throughput by eliminating hidden transmitter syndrome. Tennessee hams are running 56kbps backbones, and in California, the Hubmaster system is connecting switches at 384kbps RIGHT NOW.

Many local pioneers have been using 9600 links with great results - but their efforts have not been answered in the larger amprnet community. Let's be honest: speed costs, and not everyone is willing to pay - but in tcp/ip, unlike other areas of our hobby, we must pull together to make things better. Make no mistake: if the rest of us that use the amprnet don't support those who are investing time, money, and expertise in much needed improvements, sooner or later they'll take their radios and go home.

The knowledge, the technology, and the need are all staring us in the face - we need only decide to get it done.

: Yeah, right. I think the conversation would go like this, "Hello, Mr./Ms. Marathon Runner? Would
: you mind strapping on this little pack so we can track you in the race? How much does it weigh?
: Oh, not that much, say a pound or two for the transceiver, another pound for the TNC, and the GPS
: only a pound and a half or so, not counting cables, batteries, antennas, etc. Oh yes, speaking of
: antennas, you'll need to wear the GPS antenna on your head so it can get a good lock on the satalite,
: and do try to keep that 2m antenna vertical. What was that? You want me to stick the pack, WHERE?!"

Sarcasm aside, we have used APRS with the Columbus Marathon for several years now, it really is an invaluable tool.... We track the lead wheelchair, lead male and lead female runners, so we know the flow of the race, and make sure roads are closed and everyone is ready. We track the tail end of the course (closing caravan), to release volunteers. We track runner pickup vehicles to determine who is closest to the point where someone has dropped out. We place monitor systems at Net Control, the Press Room and Medical control so everyone can see where the race is at. It is great!

We just had the Boston Marathon yesterday, and *did* use APRS for it.
We put GPS trackers in the command vehicles (and probably would have on the medical buses, if we had enough...) It worked out very well...

-Yeah, right. I think the conversation would go like this, "Hello, Mr./Ms.
-Marathon Runner?

Nope, not for tracking runners. They used some sort of transponder that got tied to runner's shoelaces and read via a mat at 3 points along the course

There is a list of the ip address coordinators kept on ftp.ucsd.edu in
the /hamradio directory. The filename is called amprnets. You can
get to it via an anonymous login. It is a plain text file that lists
all the coordinators according to the geographic area they cover. It
will only give you their name and callsign though, so you will have to
track them down some way to get into contact with them. The best
thing to do IMHO is to find someone who is running tcpip on packet in
your area and ask them if they know how to get in touch with the ip
coordinator. They can probably help since they had to get in touch
with the coordinator to get their ip address. 73 & GL

I'd be interested in hearing of anybody attempting to use the IBM mWave DSP as a TNC. I have a ThinkPad 755CD with the DSP.
It would seem to be possible to program the device as a TNC, assuming one knows the inner workings.

TIA

I have no idea what CHAT or KNOS nodes are, but I have a feeling they are
different from IRC.

: 2. How can available IRC servers that specialize in special interests be
: identified and how can channel numbers be determined? Can anyone point
: to some good IRC servers for amateur radio and teens?

Check out http://www.dal.net to learn more about IRC and the DALnet IRC
network. It's the best one, IMHO. Although I don't know of any radio or
electronics talk on any IRC server.

: 3. There is some special client software available for Windows. It it
: necessary or can I simple TELNET to a particular server and channel?

It's much nicer to use the client software for windows but you can telnet
to telnet.dal.net and login as "dalnet" and you can irc from there.

Mr. Tracy Reed http://rohan.sdsu.edu/home/treed IRC-Maelcum
Check out DALnet! The best IRC network around: http://www.dal.net

I'm looking for a native OS/2 terminal program for packet. I'm tired of using ZOC (my phone terminal program), and can't seem to get PR2 to run.

Can anyone point me to somehting that they've actually used?

Thanks --

2016. KISS mode

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-18 00:00:00 UTC
From: myzgin@ham.msu.SU
Message-ID: <m0u9q6A-000BQQC@ham.msu.su>
Source record: 37556

Hello, dear friends!

Excuse me for a stupid question, but I didn't find any explanation
of commands TNC's in KISS mode.

The problem: I use KPC-9612, dual port Kantronics TNC, it works good,
especially on 9600 bps in terminal mode. To use some special software
that needs to switch TNC in KISS mode (for example TFPCR with GP, or
WINPACK) I prefer to use 9600 port, BUT (!) as a default TNC uses 1200 bps
port. In manual I found command PORT 1/2, but this command switches ports
in terminal mode and make another default port in terminal mode. In KISS
mode TNC always use 1200 bps port. I know, that G8BPQ software can control
TNC in KISS mode, and it really does!

But how can I switch ports in other packet programs?

My callsign: UA3DVU, packet address: UA3DVU@RZ3AXO.MOS.RUS.EU

E-mail: myzgin@ham.msu.su <- it is more reliable.

73! Eugeny.

There is a driver call ETHRAX25.COM which allows you to use regular winsock applications like Netscape & WS_FTP over a TNC and an AX.25 packet network. Is there a TNC AX.25 driver for Windows 95? This would allow 95 to handle the packet network just like any other network to which the computer is connected.

Thanks!!

2021. Windows with 10 ms in realtime possible?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-18 00:00:00 UTC
From: guenter.rinke@irch.fzk.de
Message-ID: <4l60k0$65v@hdihp3.fzk.de>
Source record: 37561

Hello,

I am looking for a possibility to use windows for workgroups 3.11 as a
real time operating system though I know that windows is not a good
real time system. However, I only want a delay time of 25 ms between
an interrupt of my special I/O card and the activation of the
corresponding windows driver software. I can not change the driver
software.

The I/O-card is a Baycom USCC4 type in a PC slot which works well under DOS.
The windows packet radio program is WinPr. With this program the TxDelay
is greater than 50 ms and I can not use all digipeaters.

Does anyone has an idea to solve this problem? I tried it with a minimum
version of WfW 3.11 but it failed.

Hi,

TAPR stands for Tucson Amateur Packet Radio, a pioneer Packet radio group of over 1000 members that got the packet radio movement started in the US. They have a home page at http://www.tapr.org (I hope that's right) and are very active in the promotion of digital communications. Check out their page!

Well, the short answer is - it's impossible. Primarily because
Win3.x doesn't permit pre-emptive multitasking. Any process that is
currently executing can essentially grab 100% of the CPU time, until
it yields control back to Windows. Now, working at the interrupt
level, you *can* grab the interrupt yourself, and allow the ISR to
do a bit of work, but you'll have to bypass the Windows serial
interrupt routines, which may or may not be an issue.

What exactly is the problem you're having with Pr/2 ? What kind of TNC
do you have ? There are other os/2 native progs, for the PK series, and
also for other types of modems. I ran pr/2 back when it was SP, and can
prolly tell you what's wrong with it if you tell me what probs you're
having. ttyl.

Try loading the driver software before running Windows... I have a DRSI
card running under Windows 3.1 with NO problems... But I have to load the
TNCTSR.EXE driver before running Windows... I'm not familiar with the
Baycom USCC4 card, but I think it will ONLY run if you load the driver
before Windows...!

Marv, K4BVG...

Even when the experts all agree, they may well be mistaken.

I'm not sure about the program, but a better choice might be a striped
down OS/2, in text mode OS/2 require less memory and runs very fast, and it
should not have any problem handling those stuff with 4MB ram.... Also
you can even multi-task in pure text mode (with out GUI loaded in memory).

What math class are you taking? I've been evaluating the math teachers at a local community college for Calculus. One was great, he retired. The other two are complete losers. One thinks everyone is cheating and let's you see your test results for 3 min at the end of class. He thinks calculators should be illegal. (he's a disaster, I won't say more). The other guy has no personality. He thinks Calculus, is students memorizing theorems, proofs, and definitions. (he has students write them down during the last 5 minutes of class). He hates slang. If your math english is defective, you will receive a lower grade. During each evaluation I asked them what Calculus means, and asked for an oral history. The retired teacher went on to explain in lively detail the period from the Greeks to Leibniz. The other two told me to go to the library, as they didn't have time for nonsense.

I'm afraid we are left with students of the sixties who were at Love-Ins and Protest marches (my generation) instead of learning what it is they are now teaching...

Good Luck!

No. But if everyone sends me $100, I will commission the code to be written
by a software firm. I'll let you know when the account reaches $30k and work
can begin... :-)

Hello everybody

I would like to know if there is a club or an official government agency
that deals with Ham radio.

I am new is this field and would like to know somebody in Saudi Arabia
who is using this system.

I am staying in Dhahran.

Thanks.

Mohammad_AL-Buzaid@Sahara.com

Hi Jakes...

I run FBB together with an Ethernet Ne2000 Lan Adapter and Personal
Netware.
There are two good interfaces for Lan , first is BPQ and it's
NODEDRV4 for Ethernet adapters (i think you must use NOVELL Netware).
The other is Flexnet,you can choose in the driver package the right
driver for you....works with and without Netware.
My config. is : a 286/12 Packet Server with FBB5.15c and Flexnet for
HF and Network and a 486/50 running WFBB7a with Flexnet Network
driver.
All files are available in den HTTP://WWW.FUNET.FI/PUB/HAM/PACKET
area....Configuration examples are given in the Doc files...

2039. packet speed pk96 etc.

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-19 00:00:00 UTC
From: "Jo.Vee%12": 210/101.0;
Message-ID: <562_9604212217@woodybbs.com>
Source record: 37579

QUESTIONS ABOUT FACKET/YAPP/SPEED/GATEWAY`S/PK96/DUPLEX/SIMPLEX.

RESYME:
Hello my name is Jo Eirik Vee and i`am working at a Norwegian coastradio station called Floroe radio. The last monhts i`ve been working with data transmittions for the maritime users. Today there is no good equipment for this kind of use in the maritime VHF/MF/HF band. When i started with this project we borrowed 2 modems and software from a company called Skanti radio Norway. The drawback with this was the high cost. Approx 10.000 Us$ for one site. The price due to the flexebility was not good enough. Next step was to try ordenary modems and communication programs and use this in the VHF band. This worked ok,but transmittion speed was not high enough. I need at least 9600baud and i`ve got max 2400. So i`am stucked,but hopefully not for so long. i hope there someone out there who can give me a clue and info about the equipment amatuers are using for this purpose. I`ve already looked into this world and i think there must be answers at this place.

WHAT IS MY NEED?
Software that can work as an ordinary BBS, this also have to include a gateway function so that maritime useres can dail into the public network using COM2 wich are connected to an ordinary modem on my computer.
I know You are using a protocol called YAPP for transmittion of binery files Does this protocol have the function "Updating files"? meaning that files with similar names, and if one of them have been updated/changed on one of the sites then the transmittion only transfer the change and not the complet file.
Is there modems who automaticly drop speed when conditions are bad? I`ve looked at a modem called PK96 but this dosent have such a facillety.
Is there anyone who can bring me some information about PK96 and have tryed working with a baudrate of 9600. At the Coastradio station we will work in full duplex mode so i don`t need the swithing of transmitters wich is requiered when working simplex.
I also want to know the formula for calculating maximum speed due to bandwith.
If there is someone out there who can give me answers i`ve be pleased. You can also leave your telephone number so i can call you.
Many thanks.

Regards
Jo Eirik Vee Ex.(LA4HCA)

There are a number of such programs available. One good one is
RxCluster. I think it's available at the ARRL BBS. It just monitors
the spots going out to others and puts them on your screen. Also checks
for needed countries, etc.

I don't know what is going on in the USA, but here in Europe it seems
like the HDTV developments have been temporarily suspended and the move
to digital TV (DVB/MPEG2) is made first. Within that standard it will
be easier to have HDTP transmissions that are compatible with existing
equipment (in that the HDTV transmissions can be received on standard
equipment, of course in lower resolution).

To keep up the sales of television sets, the manufacturers are currently
telling us that chopping off the top and bottom part of a TV tube (changing
the aspect ratio from 4:3 to 16:9) is going to improve our viewing
pleasure. I fail to see how it is doing so, and I think to improve TV
the majority of attention should not be paid to the hardware :-)

That's easy. Get a 120 MHz motherboard, or a PI2 card.

Heh, heh. There's truth there. The real problem with TV isn't
picture quality, it's content quality. "57 channels and nothing
on" is how one critic put it. HDTV will make the panoramas of
televised golf matches (snore) more realistic, but what will it
do for Ricky Lake or Geraldo?

Hi chuck,
It was nice to hear from you. I received your letter last week. I meant to write erailer. I hope all is welll and you are doing fine. right now I am using my friend E-mail service. I have been set up for E-Mail at work for a while. It is kind of slow sometimes it takes about couple of days to recive a message back. No complain, It is better than nothing at all.I am eclosing my E-mail Id at work you can get in touch with me through that. My E_mail is:
ARAMCO/CAD/OVEISSND%MSMAIL#@ARAMCO.GEIS.COM
Let me tell you about our new work place. It is nice and work is good. Everyone says hello and they have asked about you. I have been told by Roger that you have been in touch with Maggie. As far as new commuting partner yes there is a new guy from Canada. As far as Jina Oveissi in New Jersey on Internet Yes she is my sister in-law. Once again wish everything goes well for you and looking forward to hook up in near futher. Keep in touch and take care.

PS: Do you know why all the Saudies go to Rice university?
Guess what because they love KABSEH (if you still remeber what KABSEH is: rice with meat Saudi Style....).

When you start boasting frequencies... over here in the Netherlands,
packet activity is on 144.620 - 144.675 and 430.600 - 431.000 MHz.

>mode TNC always use 1200 bps port. I know, that G8BPQ software can control
>TNC in KISS mode, and it really does!

> But how can I switch ports in other packet programs?

I don't know the KPC-9612, but most 2-channel TNCs allow channel selection
in KISS mode on a per-packet basis.

The channel number is coded in the upper nibble of the first byte sent
to the TNC (after the opening flag).

E.g.:

C0 00 xx xx xx xx C0 -> send xx xx xx xx on 1st channel
C0 10 xx xx xx xx C0 -> send xx xx xx xx on 2nd channel

You will need to check your host software to find out how to switch
between sending "00" and "10" as first byte.

2054. Using Icom IC-2GAT with KPC-3 - Help!

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-20 00:00:00 UTC
From: bmicales@facstaff.wisc.edu
Message-ID: <4larlo$2dim@news.doit.wisc.edu>
Source record: 37594

Hello all,

I hope some kind soul can help me. I am attempting to use my IC-2GAT as a portable packet station and I recently purchased a KAM<-->HT cable from AES. I looked at the wiring diagram for this cable and compared to the on in the manual for the KPC-3. The wiring between the pins looks correct and the only difference is that instead of a 3.9K resistor from pin 3 (PTT)..a 3.3K resistor is used. Instead of a 0.1 uF cap, a 0.33 uF cap is used from pin 1 (Mic audio).

Has anyone sucessfully interefaced an IC-2GAT with a KPC-3 or KPC-2 TNC? If so would you please share with me the wiring diagram you used for your cables. Please help. You may e-mail your answers to the e-mail address below. Thank you for your help.

I have got an ASM-SDLC adapter card...

It has an 8255 PIO, an 8253 timer and an 8273 USART - it is fitted
with a standard 25 pin "RS232" socket.

It used to be connected to a commercial leased line, through a modem
with asynchronous / synchronous capabilites.

I have no software or drivers for it unfortunately... I am
considering some hacking & serious debugging, but before I do, does
anyone have any info on this card ?

I am sure it has the capabilities of a USCC slot card... how to
get it working is the problem.

I am interested in building a TNC from scratch possibly using software for the control. I primarily want a 1200 baud 2M connection for DXClusters. If anyone any interface software/schematics, please let me know. Any help would be appriciated.
Thanks in advance.

>That's easy. Get a 120 MHz motherboard, or a PI2 card.

Uh, huh, Intel loves Bill Gates, but unfortunately throwing hardware
at the problem won't make it go away. The problem is that Win 3.11
is a non-pre-emptive multitasker. That's totally unsuitable when
realtime response is required because task switching only occurs
when the current app releases the machine, and that could be any
random amount of time.

Instead of throwing hardware at the problem, the correct response
is "get a real OS". MP/M on a 4 MHz Z80 could have done what he needs,
but Windoze on a 120 MHz Pentium can't. Switch to Linux, Solaris,
or even NT, but forget Win 3.11, it's brain dead.

My Amateur Radio Elmers Resource Directory (one way to access it is via
the World-Wide Web at http://www.gonix.com/pschleck/elmers/) lists two
principal IP coordinators for Maryland. Their entries are as follows:

James Fay N3HPZ

****
* James Fay Voice: +1 703 323-3177 *
* Music Department Fax: +1 703 323-3796 *
* Northern Virginia Community College *
* Annandale, VA 22003 nvfayxj@nvmusic.vccs.edu *
* *
* "Friends don't let friends use DOS" Team Linux N3HPZ *
****

WWW Home Page: http://nvmusic.vccs.edu/~nvfayxj/http/index.html

AMPR.ORG IP COORDINATOR FOR PRINCE GEORGE'S, ST. MARY'S, AND CALVERT COUNTIES
OF MARYLAND SUBNET (44.60.XXX.XXX)

* n3hpz.ampr.org 44.60.208.1 (TNOS Linux)
* croom.ampr.org 44.60.208.3 (Linux, Gopher, WWW, 145.75 Mhz)

I have been working long and hard to develop TCP/IP use in Southern
Maryland. I keep up with the latest DOS and Linux software. If I can
be of any assistance, don't hesitate to call or write me.

PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,
Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST
Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of available archives are stored in a file called 'FILES', and it is located in the /var/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic directory.

If you want to access the BBS via Telnet, all you have to do is access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

AMPR.ORG IP COORDINATOR FOR MARYLAND SUBNET (44.060.XXX.XXX)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

[Editor's Note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

OWNER OF THE MD-HAMS MAILING LIST

The md-hams list has been placed on-line to allow people involved or interested in various facets of Amateur Radio to have a place to talk about local activities in Maryland and the District of Columbia.

To subscribe, send E-mail to md-hams-request@wb3ffv.ampr.org with:

subscribe md-hams <your E-mail address>

in the body of the message. An acknowledgement message will follow shortly.

If you have any questions or problems, feel free to contact me at one of the numbers/addresses above. Good Luck...

You can also directly view the above entries as hypertext at URL's:

>resistor from pin 3 (PTT)..a 3.3K resistor is used. Instead of a 0.1
>uF cap, a 0.33 uF cap is used from pin 1 (Mic audio).

I forgot to mention, that when using this cable, the HT is keyed to transmit. No command is given to the TNC to transmit and I have not yet changed any of the transmit parameters for use with the IC-2GAT.

I think, but not sure, that a higher resistor may be needed since the PTT is keyed "by providing a low impedance path from the mic input to ground" (taken from the KPC-3 manual).

I am well aware of the fact that the TNC does contain an internal isolation circuit. However, since I wish to use this TNC with a number of different radios, using this circuit is NOT desired. It would involve opening the TNC and resetting the jumper J2. While I am not concerned with doing this, I think a much easier "work around" would be to include a similiar type of circuit in the cable between the TNC and the radio.

Those with an IC-2GAT, KPC-3 (or KPC-2) your help is appreicated. Anyother help is also welcomed.

Thank you in advanced.

>>resistor from pin 3 (PTT)..a 3.3K resistor is used. Instead of a 0.1
>>uF cap, a 0.33 uF cap is used from pin 1 (Mic audio).

Solved the problem with my cable. After much closer inspection, I discovered that the wire (white) leading from the tip of the smaller jack (used to control the PTT) had a break in the insulation. Cabling worked fine without the housing (Al), however, if you place the housing on the DB-9 connector, this break in the insulation caused a VERY LOW impedance path (in fact none :)) to ground.

Snipping the wire, stripping back insulation to expose fresh wire , solder, and wrapping in electrical tape solved the problem. Overkill??? Maybe, but rather be "safe than sorry". Thanks again for the help.

From: kriss@spec.com
Message-ID: <kriss-2104961938070001@lanrover4.spec.com>
Source record: 37454

I have been using NET/Mac for years and just ran into a new problem. The local ax.25 BBS put an MSYS port on the freq where we have been running ip. He turned on the tcpip options within MSYS.

The problem is my NET/Mac can send smtp messages to the MSYS station but cannot seem to understand the closing message from the MSYS station. The msg passes, my station does not get an ACK and sends the message again. I had 13 copies of the same smtp message on the MSYS BBS.

The problem seem unique to NET/Mac. The JNOS stations do not seem to have this problem.

Anyone know of a fix?

interrupt latency is a real problem under Windows. it is very
unpredictable, and i have never for a good fix. to do any real time
work, you have to get pretty deep into the virtual machine setup of
the 486, and do a variety of gymnastics to run at the 0 level. i tried
to do some baycomm/hamcomm type stuff under Windows and gave it up as
a bad job.

There is a way of making data links at 10GHz, using gunnplexers. If I recall right, there was an article of such in the ARRL handbook. I got some gunnplexers and the range they are useful is huge! And combined with a horn antenna or a 60cm dish, a link of several kilometres can be archieved.

2069. Packet via voice repeaters

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-22 00:00:00 UTC
From: vk2gjt@netwit.net.au
Message-ID: <4lfia7$6se@klf.netconnect.com.au>
Source record: 37459

Hello all,

What is involved in using a voice repeater to 'digi' or extend the coverage of packet radio? Is it just a matter of setting the radio onto the appropriate channel and split and going for it?

Reason is we have a virtually unused repeater in this region of central NSW in Australia, but absolutely no digipeater facilities around within useable range. There are quite a few potential packet operators around this district, but the area is fairly large, with many high ridges spread around which makes a mess of reasonable contact with most people by packet. We thought of possibly using the voice repeater to allow contact over a wide area with packet and also tying a packet bbs into all this.

Another point with all this is that it does not tie us into a fixed 1200 baud repeater. Someone could use 1200 baud and it would hopefully work, and tomorrow we could experiment with 4800 or higher speeds without having to install more equipment at the site.

Anyone have any ideas on this?? What settings, parameters etc would have to be changed from normal operations??

Cheers,

2070. Packet Tracker program

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-22 00:00:00 UTC
From: vk2gjt@netwit.net.au
Message-ID: <4lfiab$6se@klf.netconnect.com.au>
Source record: 37460

Hello all,

Does anyone out there have any idea where I could get hold of a program called 'Packet Tracker'. I read about it in an ARRL publication on higher speed and different packet applications, I think.

Going by what is written in the book, it was originally written for the Mac, but at one time I am sure I had a copy on my computer, but never got around to checking it out, and naturally it has disappeared from the HD.

Basically it monitors packet activity on a channel and displays it in a graphical form, showing what stations are connected to where, doing what and to whom. It can display stats on the channel activity, highlighting retries, collisions and throughput. Seems to be a very interesting program, but I just cannot lay my hands on it anywhere.

Can someone help?? If you can, please send me the info via this newsgroup and/or e-mail. I wrote a message on packet and got a deluge of mail, all asking if when I get hold of it whether they can also get a copy, so there are a few people here after it.

Here's hoping,

Greg Towells vk2gjt

Source record: 37461

We have experimented with using repeaters for extending ranges.. and it works quite well. You just have to allow a longer txd value... and that is purely experimental due to different repeaters having different delays set. You'll also have to fool with axhang, but this isn't quite as critical as txdelay.

Really 1200 is going to be it without modifying that repeater. 2400 is possible without any mods to radios or repeaters, but your tnc will have to be modified. I've seen one tnc modified for a dedicated link to 2400 and it was a PacComm Tiny II and on that model all that is required is replacing one crystal that in effect doubles the clock speed and gets you up to 2400 baud. The other tnc was modified the same way. I don't know if this will work on other makes, or if 2 different makes can talk to one another once modified.

To find this out, I'd look at the NEDA home page. I don't know the URL, but connect to http:\\www.yahoo.com and search. You will find it from there... I've done that before.

Good luck.

-----------------------------------------

Berlin, 14.4.96

1. What is dptnt?

dptnt is a packet radio AX25 package running under LINUX with no special
requirements to kernel or setup. It is NOT another tcp/ip package.

The archive contains the programs:

TNT : A hostmode terminal program for packet radio
DPBOX : A full featured BBS
TFKISS : A TNC-Firmware-Emulator with a KISS and AX/IP interface
BOXSTART : A 'watchdog' and program starter
DPBOXT : A standalone console for BBS operator (DPBOXTerminal)

In addition, HDPARM is included, because of receiver overruns on the serial
line with the actual LINUX-kernels. More details can be found in the README
of TNT.

Out of these programs you can create a configuration which fits to
your needs. You can set up a personal mail system, a powerful packet
radio terminal for your own needs or a full featured public bbs.

2. Some features

terminal part:
- Virtual screens for every connection
- connect scripts
- shell, run and socket interfaces
- AutoBIN protocol for file transfer
- forcing bbs to start forward if own call found in a mail beacon (to gather
your own private mails)

bbs part:
- F6FBB-, W0RLI-, TheBox- style forward protocols implemented
- 8-bit transparency of messages using AutoBIN protocol (no 7plus needed)
- BBS-data online compressed to save space on disk, forward and download
- BBS can be filled by monitoring the frequency (useful for private usage)
- PACSAT style bulletin broadcast transmitter and receiver
- up to 200 simultaneous users

both:
- fast, reliable, economic

3. Connectivity
```

With the current package, you are free to connect an unlimited number of the following devices to the system:

- TNC2 / TNC3 in wa8ded-hostmode
- any KISS device, this includes:
- almost every TNC of any vendor
- rmnc digipeaters
- PC/Flexnet digipeaters
- wampes tcp systems (SMACK KISS)
- any redirectable KISS port on your Unix machine
- AX/IP to connect via any IP connection

4. Status

The development is ongoing, the archive is a snapshot of the current status. The documentation now is complete.

With this release we want to give an easy access for everybody being interested in the software. TNT and DPBOX is currently running in 8 BBSs of the german BBS network, and we received a lot of requests for a general release.

TNT and DPBOXT are under the GNU public license, TFKISS under ALAS, which is a german license for HAM RADIO software. For these programs, the source is included.

DPBOX can be freely distributed for HAM RADIO use, but the source is not available, commercial or citizen band usage is prohibited.

5. Archive files

boxstart.tgz : boxstart binary, source and documentation
dpbox417.tgz : dpbox binary, configuration and documentation
dpboxtsrc.tgz : dpboxt source
hdparm : hdparm binary
hdparm-2.2.tar.gz : hdparm source and documentation
tfkiss_960406.tgz : tfkiss source, configuration and documentation
tntbins_070496.tgz : binaries of tnt, tfkiss and dpboxt
tntsrc09l.tgz : tnt source, documentation and configuration

6. Contact

Author of dpbox:
Joachim Schurig, DL8HBS DL8HBS @ DB0GR.#BLN.DEU.EU
h0187akk@rz.hu-berlin.de

Author of tnt, dpboxt, tfkiss and boxstart
and Co-Author/porting of dpbox:
Mark Wahl, DL4YBG DL4YBG @ DB0GR.#BLN.DEU.EU

2073. Short distance, high speed?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-22 00:00:00 UTC
From: Tom Sgouros <tomss@ids.net>
Message-ID: <Pine.SUN.3.93.960422103653.26852A-100000@conan.ids.net>
Source record: 37463

Hello all:

I am trying to put together a microcontroller application that will involve controlling many small units from a single central control station. The distances involved are in the hundreds of yards (although the location--a city--is pretty radio-noisy), but the speeds I want are high. Also, because there will be many of the receiving units, cost is an issue.

I do not have any real radio experience, and am just in the proposal stage of this project. My questions are:

o Is there a radio protocol that already does what I want? Is it cheap? What are the options?

o Is there a part of the spectrum that is available for applications like this? Will there be FCC wrangling involved?

o Are there integrated solutions to the problem? Where can I look for these?

Please copy any replies to me with e-mail, as I sometimes have a hard time sorting through the news on my site.

Many thanks in advance,

-Tom

Actually PC/Flexnet has a driver that emulates the packet driver interface.
As far as I know there is another driver out there that implements the
winsock interface using a packet driver.

PC/Flexnet runs under DOS but is currently being ported to Win95/NT. And it is
for free....
(so keep your $100 for the 32MB RAM and Pentium 133 you need for Win95 ;-))

2075. Radio network suggestions?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-22 00:00:00 UTC
From: Georgiev George <georgiev@generation.net>
Message-ID: <Pine.SOL.3.91.960422122954.17477C-100000@smtp>
Source record: 37465

Hi,

I would like to build a small low-cost radio network able to accomodate
10-30 computers (PC's mainly) in a perimeter around 10 km. Are there some
suppliers for such networks; if no what radio equpment will fit best?
Could I use ethernet 10b-2 cards with some receiver/transmitter? Are
there some specialised cards (working with dos/win, linux) for PCs?

Any ideas greatly apprciated.

George Georgiev

TAPR Dayton Activities '96

TAPR again will be very active at this year's Hamvention. With the joining of the TAPR spring meeting with the ARRL Digital Communications Conference, TAPR Dayton activities now make up TAPR's Spring gathering. If you are attending Dayton, please take a look at the following schedule. We have tried to improve upon last year and we believe we have. Come join us at the Digital Forum on Friday and then come have Dinner and a good time that evening at the PacketBASH.

Our booth will be in its usual place and activity around the booth is expected to be high, with the APRS SIG and the Sproul brothers showing the latest in Windows and MAC APRS at one end of the booth.

The dates for this year's Dayton Hamvention is May 17-19, 1996.

TAPR Schedule

Friday
12noon -- Exhibit Area Opens
1:00pm -- TAPR Digital Forum Begins
7:00pm -- PacketBASH
(Dinner, Prizes, SIG meetings, Banquet Speaker - Phil Karn, KA9Q)

Saturday
8am -- Exhibit Area Opens
6pm -- Exhibit Area Closes
9pm -- Informal SIG Meeting (TBD)

Sunday
8am -- Exhibit Area Opens
2pm -- Exhibit Area Closes

1996 TAPR Digital Forum (Friday)

The TAPR digital forum should be a great forum this year. If you have time at Dayton -- be sure to attend the meeting!

1:00 - 1:45pm
* Introduction to Digital Communications
Greg Jones, WD5IVD

1:45 - 2:30pm
* Making 56K Operations a Reality!
Barry McLarnon, VE3JF

2:30 - 3:15pm
* Spread Spectrum Technology and current issues in Amateur Radio
Phil Karn, KA9Q

3:15 - 3:45pm
* DAS and PCON and their use in Emergency Communications
Paul Newland, AD7I

3:45 - 4:15pm
* BBS Issues and Trends
Barry Buelow, WA0RJT

4:15 - 5:00pm+
* APRS Update and SIG Meeting
Bob Bruninga, WB4APR and Keith Sproul, WU2Z

1996 Packet Bash!

The 1996 "Packet BASH" co-sponsored by TAPR and the Miami Valley FM Association, Dayton's packet radio club, will be held on Friday of the Dayton Hamvention. The BASH will be moved this year to a very much larger site! So, if you were one of the folks that felt it was just too crowded for dinner -- you were not alone. The reason for the move was that TJ's Restaurant was just a little small for 1995. The event will be held at the NCR "Sugarcamp" Conference Center and will be catered. The dining room holds about 300 people! So the more the merrier! Dinner space will be limited, so make your reservation early for dinner, so that the correct number of dinners can be ordered in advanced. To make the event even better -- we can stay a lot later (until at least midnight) than at the TJ's site last year, so we should have time for informal discussions after dinner.

An event for the digitally-inclined ham, featuring:
* Buffet dinner
* Nationally-known speaker holding forth on a current topic
* TAPR special interest group meetings
* "Birds of a Feather" gatherings

We hope that this will provide an opportunity for packet and digital radio enthusiasts to have a great night out while at Hamvention.

The schedule of events for the PacketBASH is still tentative, but will look something like this:
1900 -- Doors Open (7pm)
1930 -- Dinner (7:30pm)
-- Speaker, raffle, and SIG meetings after dinner
-- Phil Karn, KA9Q, will be this year's speaker

Talk-in will be on 146.415 simplex.

Directions:
Head South on I-75 from Hamvention (North of Dayton)
Take 35 to the East around the south part of Dayton
Take SR48 (also know as S. Main) South
Exit on West Schantz and head West

Site complex is on the North side of Schantz about 2 blocks from SR48.
NCR "Sugarcamp" Conference Center, 101 W. Schantz Ave. --

For more information, send email to "packbash@ag9v.ampr.org" or stop by the TAPR booth at Dayton for schedule and map. The maps are currently available on http://www.tapr.org

The cost is $20.00 per person, tax and tip included.

Banquet tickets can be ordered from the TAPR office. Reservations made before May 1st will have their tickets mailed to them. After May 1st, tickets purchased will be available for pickup at the TAPR booth. Walk-up to the event will be accommodated as best as possible. There is limited space (in the way of food ordered) for dinner. Amateurs who wish to hear the speaker and discussion are asked to arrive around 2030 (8:30pm). All amateurs are welcome to attend, enjoy the speaker, and participate in the meetings, although only those purchasing a dinner can eat.

To register, contact:

: > network. Due to the frequency and bandwith I would be able to run the
: > radio links in duplex mode.
: > Would anybody be able to help me with the software and hardware where
: > I can convert the RS232 digital signals into analogue and vice versa?

: Q-1. What is the maximum range?
: Q-2. What is the maximum data rate?
: Q-3. Why RS-232?
: Q-4. Would Light be better than RF?
: Q-5. What is your budget?
: The first question pretty much drives the whole equation. If you want
: to go 10 miles, you have a problem. If you want to go 10 feet (meters)
: that's a lot easier.

That is not true that if you want to communicate for distances
more than 10 miles, you are in trouble. I work for a company that
produces wireless modems that work with UHF, Conventional, Trunking, LTR,
Motorola, 220Mhz, 800Mhz, 900Mhz. Maximum Range depends on the kind of
radio system in your area. Here in LA, we easily communicate with people
in SanDiego.
That is over 200 miles. The Data transmission is usually 1200 Baud for
trunking system (because of bandwidth), 2400 or 9600 for conventional
system. The modem is RS-232 and connects to the computer via a serial
port. Anyway, if interested in details, send me e-mail

> ed into this world and i think there must be answers at this place.

Yes, you've come to the right place. If you have to work over ordinary
VHF marine radios, there's a problem for speeds of 9600 baud and above.
That problem is that the radio must be modified. This may cause a legal
problem by voiding whatever is your equivalent of Type Acceptance. The
modifications are generally not technically difficult or extensive, but
they do require a small bit of skill to perform. A radio tech should be
employed. The legal hurdle is the big obstacle, you'll likely need permission
to perform the radio modifications, and you'll also likely need permission
to send the data modulation on the marine channels. Now for 1200 baud and
2400 baud, you can just connect to the microphone and speaker jacks of the
marine radios and go, no modifications are required.

For higher speeds, such as 19.2 kbaud or 38.4 kbaud or 56 kbaud, you need
more bandwidth than is available for a standard marine channel. At the
higher speeds, you also need a purpose built data radio and not just a
modified voice unit. These are available, and they aren't very expensive
for amateur use, but might be expensive if Type Acceptance were required.

> file.

For software, the best thing would be to use one of the TCP/IP packages
available for packet. They do internet style Email, internet style ftp
file transfers, and have telnet capability. They are fully interoperable
with the internet, so gatewaying would be automatic. Some of the NOS systems
also have a built in BBS if you really want to use that. I think that
approach is better than an old BBS and the antiquated YAPP protocol.

> Is there modems who automaticly drop speed when conditions are bad? I`ve

> full duplex mode so i don`t need the swithing of transmitters wich is
> requiered when working simplex.

I'm not aware of any of the packet modems doing automatic speed switching
according to conditions. For HF and MF, packet, as currently done, isn't
a very good way to go anyway. You should consider using Clover II or Pactor II
instead. They are robust protocols for the HF and MF channel, and can
negotiate to suit conditions. There's a nice BBS system called Aplink
which you can use with them.

These systems could be used on VHF too, but they won't offer the speed
that VHF packet can give you, and channel conditions usually aren't so
bad that you need the additional robustness offered by Clover or Pactor.

> I also want to know the formula for calculating maximum speed due to band-
> with.

This is complicated. There are several modulation forms, such as FSK, MSK,
PSK, QPSK, M-ary SK, etc. And these may be double modulated, IE for packet
the usual method is AFSK over FM. That's a horrible bandwidth hog, but it
is simple and works for low speed packet data at VHF with voice radios.
The other methods are generally direct modulated. Each form has its own
occupied bandwidth equation. And then there is symbol overloading, which
can encode more than one bit per baud at the cost of needing a better
SNR. And there's the overhead of the protocol which has to be factored
in to get the effective data rate. It would take a book to detail all
the various factors which determine bandwidth for a certain data rate.
If you really want to know, I can recomend some books, or even post and
explain the formulas for some of the more popular modulations.

Gary

For ordinary 1200 and 2400 baud packet, that's about it. You have to lengthen your TxD a bit to allow the repeater time to key up, but otherwise you just treat it normally. Setting the repeater for zero hang time can help if your users are using carrier squelch, but if they are using data squelch, then you can play with the Axhang parameter to speed up operation.

Now you can use a bit regenerator at the repeater. This doesn't really help reliability much in practice, but it does keep voice users off the repeater.

For 9600 baud and above, the situation gets more complicated. An ordinary voice repeater won't pass those signals properly, and will have to be modified. If you can get the received signal direct from the discriminator, and feed that directly to the modulating varactor of the transmitter (direct FM transmitter assumed), then that can work. Everybody has to be careful with their deviation and passband shape factors for it to work well, however. It might be worthwhile to add a bit regenerator in this case to clean up some of the nastier signals.

For higher speeds, you're going to be doing direct FSK, and a bit regenerator will be needed.

Gary

It appears that I am the victim of the usual Japanese to English translation
errors as well as my own memory failure. I'll apologize for the confusion on
my part; Kenwood will have to come up with their own excuses.

My TS-440 manual very clearly states that the "FSK T" and "FSK R" lines appear
on two of the three RCA phono jacks on the rear heat sink (not in the 13-pin
connector like the TS-840). When I continued to read the detailed explanation
in the text on page 18, these leads mysteriously migrate from FSK (digital)
into AFSK (analog audio).

However, nowhere does the manual say that you can or can't connect a true (TTL
or RS232) FSK interface to those jacks. The front panel mode control switch on
my rig is labeled FSK, but that too is a lie from Kenwood. Therefore you are
quite correct, there are no true digital FSK lines on the TS440, regardless of
what the official Kenwood owners manual says.

There is/was a driver for the Baycom that was written specifically for Windows. I've ran it in Win 95 and it actually worked. I can't recall the name of the author but I do remember he had a Web page in the UK. The version I got from him was an alpha (or beta?) version for testing. He thought he would release a final version after it was tested more. I run packet from a 386 (with DOS) that doubles as a doorstop so never followed up to see if a newer version was ever released. Since I've not seen more, it might not have worked as well on other systems as it did mine, or the guy found something else to do.

I was playing with writing a Baycom driver for Windows when I came across one already written and so immediately lost interest. I did get far enough to convince myself it could be done. I was also designing a standard serial port converter for the Baycom but ended acquiring a glider (an 18 meter experimental class HP-14 :)) and have been spending all my free time trying to get it back to an airworthy condition. I know I could buy a 'real' TNC with a lot less effort and no more money than the Baycom, but this is what I like to do. BTW, I even designed/etched the PCB I built my modem on.

Was hoping someone could assist with a recommendation of a good
news reader for jnos ? Sorry if this has been covered ad-nauseum
before in this newsgroup, but I'm still pretty new to tcpip on
amprNet.

We have a great NNTP server down here in Brisbane, and would love
to be able tto read the news selectively instead of sequentially.
The system i'm using for packet is JNOS110M , 386sx40. 1meg ram.
Oh on DOS of course.

An FTP site where I could pick up a copy would also be great.
many thanks in advance.. Paul VK4XD.

Hi Greg,

>What is involved in using a voice repeater to 'digi' or extend the
>coverage of packet radio? Is it just a matter of setting the radio
>onto the appropriate channel and split and going for it?

Few things came into my mind..

The repeater should be able to open up without bleep/ctcss and send the id as rarely as possible. Modems should have carrier (packet-data) detection so they know when there is data on air or is the repeater sending 'empty' carrier. Txdelay has to be raised probably and the repeater is good to adjust so that it doesn't send a beep at the end of turn. Someone else can continue..

Source record: 37485

That's not really "baycom" and it's not really a "tnc": What you
think is a tnc is actually just a simple modem; the tnc action
actually takes place in the PC itself. I like baycom and I have one
of the baypak modems and I think it works great and is a good buy for
the money. But it is NOT a "miniature tnc". This modem, in
conjunction with a PC running baycom or other tnc emulation software,
performs all the tnc functions. The mfr. of the modem you refer to
probably is BayPak which is sold both directly and by Ramsey electronics
and probably others.
Advantages of baycom systems:
Low cost
Good Packet-only performance; often better than commercial tnc's
Reduced or no RFI to packet receiver as compared to commercial tnc's
Remote access to PC hard drive for email and binary file transfers
Small package size, nice for a portable laptop packet setup

Disadvantages:
No other modes with such systems such as CW, RTTY, FAX, etc.
Since the pc IS the major portion of the "TNC" you cannot disconnect the
PC from the modem and let the modem store incoming messages as is
possible with most commercial tnc's
(see above) PC must be running in order for any packet functions to
work at all

I've used one on the local DX Packet Cluster for the past 3
years and with the Baycom software that comes with it, you have
a 3 window screen. It works great and I just upgraded to the
lastest rev. Only limitations with my setup is 1200 baud limit.
Otherwise very pleased. I still have MFJ 1270B in setup for backup.

Yes, although I am not sure if the company which made the Net/Rom eproms
is still in business. There is a clone called TheNet X1J available,
although some of the original code is of questionable origin. You should
be able to find it on at ftp.ucsd.edu in /hamradio/packet/thenet or
something like that. Some minor modification to the TNC will be required.

If you want to use a computer, the G8BPQ code will work fine or you could
use one of the various versions of NET or NOS and get TCP/IP as well.

2110. Packet BBS accessible via telnet on the Internet anywhere?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-24 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDqDy6C.5H0@netcom.com>
Source record: 37406

Now that I've been dialing up into my ISP at 28.8Kb, 1200 baud seems dredfully slow in comparison. besides the problems of getting crouded out by other packet users on the same frequency, and loosing connections when trying to packet mail a file.

I was wondering if someone has a packet BBS connected to the Internet, and if I could connect to it doing a telnet. Obvoiusly, I'd need an account and a password before being allowed to send (transmit) messages over the ham radio packet net. But in other respects be treated just like a ham using a TNC and radio instead of the Internet to connect.

2111. What 2 meter packet frequencies and BBSs in Orange County CA?

Pat,

All you need is a tnc, and radio, cable, and antenna. I operate a net/rom node that works exactly like yours, and it will do just fine.

You should look at how much traffic will be moving thru the node, and if it is a lot, you might want to get the nodes on either side to backbone with one hop at your site, then you move your local user port to another freq other than the 2 other nodes. That way, you can use it without a bunch of collisions. That is what I'm up against now, and working to solve.

My gear is this:

PacComm Tiny II tnc- cost new $110 / used about $75 in good condn.

Kenwood TM 221- used cost around $200.

RG9913 coax. (Heliax would be better, but more $$$!)

High Gain omni antenna.

The eprom can be removed, and reprogrammed if you no of someone locally with a burner. If not, you can order one for $10 programmed up. I don't have an address of where to get that from, but if you go this route let me know and I'll get that for you.

I use TheNet X1J softward in the eprom. I find it to be much better than TheNet Plus in my opinion. It has many more features for the sysop that can be changed remotely instead of reburning a prom.

Good luck!

In article <DqA9Ly.68C@firewall.tasb.org>, pmzone@clearlight.com (ML., Michigan, USA) says:
>
>Do any amateurs have experience with the Baycom minature TNC? Its the size of
>a centronics printer connector and costs $50

I've got the A&A packet modem, which is the same thing in a little bigger package. i bought it as a cheap way to try packet, combined with a RS HT202, and haven't bothered to upgrade yet.

it works well. there are some drawbacks, however. the bulk of the work is done in the host pc. it is, of course, time critical real-time work, so the BayCom software will not work under Windows. also, what you see is what you get: PackRat and other name brand software won't work. there is software on the net that i believe is intended to allow the modem to be used with other interfaces, but i never could get it to work well. the documentation is in German, btw.

i think that anyone seriously into packet would outgrow the Baycom pretty rapidly. i don't use it heavily, so it is fine for me. you can do terrestial, and i have gotten some MIR stuff. if you want to go for 9600 baud, BPSK, and so forth, you'd probably be better off just buying the much pricier PacComm, AEA, or such right from the start.

Hi !

While we have no NDIS KISS driver, below the idea how to use ethrax25
driver with WIN95. I'am not sure that it's will work. Any comment ?

73! RX3DIN Victor

With the ETHRAX25 driver, you can use the ODI->Packet driver shim by
Don Provan @ Novell.

Maybe it let to us use Windows 95's NDIS/ODI shim to actually talk to
the driver...

Ethernet Packet Driver MLID, v1.04
don provan 8/17/94

Introduction

PDEther.Exe is an ODI to Packet Driver adaptor. It provides an ODI
interface for an arbitrary Ethernet Packet Driver. This allows ODI
access to any Ethernet board which has a Packet Driver and also
allows Packet Driver applications and ODI applications using
different network layer protocols to coexist in the same DOS system.

Using PDEther

In Packet Driver terms, PDEther is an application. In ODI terms, it
is a LAN driver, also know as a "link driver" or "MLID". The loading
sequence will be something like this:

1. Load the packet driver supporting your card.
2. Load LSL.
3. Load PDEther.
4. Load IPXODI, NetX, and/or other ODI applications.

Like all good ODI modules, PDEther reads Net.Cfg for configuration information. The next section of this document describes PDEther's requirements for Net.Cfg, including a description of PDEther's Link Driver section.

>some voice frequencies. Parameters may have to be tweaked to compensate
>for switching delays in the system. Sounds like a good combination that
>may spark more packet interest your way.

Years ago in the "Pre-Packet" days, there was a article in one of the mag's
(73, QST... not sure which one it was) about a RTTY group that used Sub
Audible tones (PL's) instead of the standard tones to allow voice and RTTY
to coexist -simultaneously- on a repeater. At that time the PL tones were
sensed by mechanical reeds so I would assume that would limit the baud
rate, but with the decoders available now it might be a fun project.

Actually, using DSP filtering, you just might be able to use the standard
paket tones on the repeater input and let the DSP detect/filter them and
toggle a PL tone generator that would be used on the output to allow voice
at the same time. Then reverse the process on the user end.... convert the
PL's back to standard tones, or it would be easier to just use the TTL
switching output of the PL decoder to directly feed the TNC at the same
point it's tone decoder does.

Of course, this is just a thought. Many more things would have to be taken
into consideration to determine if this would work, but it just might fly.

2118. SofTNC by J-COM

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-24 00:00:00 UTC
From: ecgallup@mlode.com
Message-ID: <4llp75$67v@news.wco.com>
Source record: 37496

Anyone out there use SofTNC packet software for the BayCom and BayPac modems? It was sold by J-COM and still available through Ramsey Electronics, I understand. I have version 1.0 and find it highly preferable to the much more complex BayCom software. However, I was wondering if there was a newer version available or in the works. Any info would be appreciated.

Ham Radio in Saudi Arabia must be conducted at approved sites. You can't just get a license and set up a station. If you want to Ham, you'll have to go to an approved site, like ARAMCO etc. During the Iran-Iraq war (Gulf War), and the Iraq war, we just signed Aeronautical, even if we were on the ground in an un-approved station :-)

Hello all and thanks for reading this. I just acquired an old Saturn 6 antenna and am having a difficult time getting the SWR down below 2.5 to 1. I am using the MFJ-259 analyzer. I am just curious if perhaps part of the antenna is missing? There are two screws attached to a piece of phenolic board. I have attached the shield and center conductor of some RG-58 coax to these screws as the feedpoint. I am just curious if perhaps there is a tuning device (other than the capacitor plate adjustment) or a balun that should be connected to these screws on the phenolic board that might be missing? Also, might anyone have an instruction sheet or manual that came with the antenna that I might get a copy of? Any help would be appreciated.

I know you can run high speed (>56kb) packet via microwave by using something like a GRAPES modem and a couple of transverters... but is there another way?

Is there a way to do it using a dual bander (2m/70cm) and some transverters? I would like to run 9600 and voice to satellites with the dual bander and then move on up the spectrum with the xverters and do >56kb to P3D (eventually) and around town.

What are the issues? Can a dual bander take the output from something like a GRAPES modem? Can I even do this? Computer -> GRAPES -> dual bander -> xverter If so, what rig would do this?

Dave Covert, KB5GOG

2131. Re: Build TNC

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-26 00:00:00 UTC
From: William Kresl <wmkresl@townsquare.net>
Message-ID: <4lpjs4$4hn@tribune.concentric.net>
Source record: 37421

A real TNC would be a real undertaking if you
take into consideration the time to construct
one. Also, you will need to obtain the firmware
and blast your own EPROM. For the cost involved
you could purchase several $100 tnc's! If you
want to try building a SOFTWARE tnc, try the
BAYCOM (see their WEB site), POOR MAN's PACKET,
or 'IMP' (DEC 1995 - QST) 1200 baud modems. These
simple modems all use the TEXAS INSTRUMENTS
TCM3105JL chip interfaced to the RS-232 COM port.
The PMP modem ties into the PARALLEL port. They
all use a software program that emulates the
functions of a TNC. A modem can be built for
between 0-$30. Commercial BAYCOM modem's sell
for as much $59! Try your hand at building these
before contemplating a real TNC! Good Luck!

>
> Rob

I'm not sure I understand what your argument is. The decision to use 16:9 could easily have been anything else. Or even the current 4:3. The cost would be the same ether way. So the decision to go with 16:9 was made, this fits most film aspects today. As was the case with 4:3 ratio when television was invented back in the 50's.

In the U.S. the standard is nearly decided. I even heard the aspect ratio was being debated again, as the SMPTE organization (Society Motion Picture (&) Television Engineers) said that 16:9 is not the true aspect of todays films and should be changed. As most films today are 1.85:1 But the HDTV 16:9 is about 1.78:1 So films would still need to be cropped or letterboxed, not by much though. This is what the 16:9 ratio was to get rid of.. I think they choose 16:9 because it was a easy to add to 4:3 in analog. But now that things are going digital, that does not matter. Also, the decision has been made that television stations will broadcast on two channels, one in NTSC and the other in HDTV. Thus simulcasting the same programing on two channels. But while there is no HDTV programming available tell the full switch to HDTV. The HDTV channel will have multiple compressed digital NTSC (funny eh?) channels. Somthing like 10 available for the local station.

But the big debate right now is how long broadcasters will have to switch over to HDTV and lose the NTSC channel. Ether 10 or 15 years. Right now it looks like 15 years. But as you can see, the cable industry is not all that happy about local broadcasters getting more channels then one to broadcast on. With 3 local stations you could have a total of 33 channels to choose from. That's if the compression is 10 to 1 plus the origianl NTSC channel.

My prediction is that most of the extra channels will be waisted on more of the same. Such as multiple viewings of the same show at different times. As the show runs through the time zones. More of "The Nanny", Blah! But I would guess in a few years the networks would launch satellite channels that concentrate on types of programming. Gee, sound familiar? I think the market is already saturated and the pie is getting vary small. Take a look at E!, they show reruns of shows like "One Day at a Time". Boring! E! hardly has what the name implies, entertainment. Oh here's another few, "The Golf Channel" or "The Game Show Network". I only hope our cable complany will not sign on, then have reason to rase rates. In addition other networks like ESPN, ESPN2 Sports Channel, east west, midwest and USA already are doing a fine job of this. Only one channel at a time can have a show. Ever notice how the Sci-Fi channel never shows any of the good Sci-Fi shows, such as Star Trek, Dr.Who, or another one I can't think of now.. But they show all three in their promos. Sci-Fi will never get these shows because they will always be syndicated. So what's left, are the left overs.

Anyway, I'm now getting into the politics and only can hope the market will fix it self. Also HDTV is now being called ATV or Advanced Television. As ATV will have many more features then just a better picture as HDTV was to do. Such as CD multichannel quality sound, (like that of theatres) data services and anything else they can think of.

Wondering if anyone could tell me if there is an easy ay to "expire"
news on JNOS. Can't seem to find any command to do this. The news
items just keep building all the time even though they have been read.
Sorry this is probably another silly question, but any help would be
appreciated.

Thanks in advance....Paul.

I've got the A&A packet modem, which is the same thing in a little bigger
package. i bought it as a cheap way to try packet, combined with a RS
HT202, and haven't bothered to upgrade yet.

it works well. there are some drawbacks, however. the bulk of the work
is done in the host pc. it is, of course, time critical real-time work,
so the BayCom software will not work under Windows. also, what you see
is what you get: PackRat and other name brand software won't work. there
is software on the net that i believe is intended to allow the modem to
be used with other interfaces, but i never could get it to work well. the
documentation is in German, btw.

i think that anyone seriously into packet would outgrow the Baycom pretty
rapidly. i don't use it heavily, so it is fine for me. you can do terrestial,
and i have gotten some MIR stuff. if you want to go for 9600 baud, BPSK,
and so forth, you'd probably be better off just buying the much pricier
PacComm, AEA, or such right from the start.

Hi !

While we have no NDIS KISS driver, below the idea how to use ethrax25
driver with WIN95. I'am not sure that it's will work. Any comment ?

73! RX3DIN Victor

With the ETHRAX25 driver, you can use the ODI->Packet driver shim by
Don Provan @ Novell.

Maybe it let to us use Windows 95's NDIS/ODI shim to actually talk to
the driver...

Ethernet Packet Driver MLID, v1.04
don provan 8/17/94

Introduction

PDEther.Exe is an ODI to Packet Driver adaptor. It provides an ODI
interface for an arbitrary Ethernet Packet Driver. This allows ODI
access to any Ethernet board which has a Packet Driver and also
allows Packet Driver applications and ODI applications using
different network layer protocols to coexist in the same DOS system.

Using PDEther

In Packet Driver terms, PDEther is an application. In ODI terms, it
is a LAN driver, also know as a "link driver" or "MLID". The loading
sequence will be something like this:

1. Load the packet driver supporting your card.
2. Load LSL.
3. Load PDEther.
4. Load IPXODI, NetX, and/or other ODI applications.

Like all good ODI modules, PDEther reads Net.Cfg for configuration
information. The next section of this document describes PDEther's
requirements for Net.Cfg, including a description of PDEther's Link
Driver section.

> a computer to be running netrom code and driving the TNC? -pat

Yes, although I am not sure if the company which made the Net/Rom eproms
is still in business. There is a clone called TheNet X1J available,
although some of the original code is of questionable origin. You should
be able to find it on at ftp.ucsd.edu in /hamradio/packet/thenet or
something like that. Some minor modification to the TNC will be required.

If you want to use a computer, the G8BPQ code will work fine or you could
use one of the various versions of NET or NOS and get TCP/IP as well.

> ed into this world and i think there must be answers at this place.

Yes, you've come to the right place. If you have to work over ordinary
VHF marine radios, there's a problem for speeds of 9600 baud and above.
That problem is that the radio must be modified. This may cause a legal
problem by voiding whatever is your equivalent of Type Acceptance. The
modifications are generally not technically difficult or extensive, but
they do require a small bit of skill to perform. A radio tech should be
employed. The legal hurdle is the big obstacle, you'll likely need permission
to perform the radio modifications, and you'll also likely need permission
to send the data modulation on the marine channels. Now for 1200 baud and
2400 baud, you can just connect to the microphone and speaker jacks of the
marine radios and go, no modifications are required.

For higher speeds, such as 19.2 kbaud or 38.4 kbaud or 56 kbaud, you need
more bandwidth than is available for a standard marine channel. At the

higher speeds, you also need a purpose built data radio and not just a
modified voice unit. These are available, and they aren't very expensive
for amateur use, but might be expensive if Type Acceptance were required.

For software, the best thing would be to use one of the TCP/IP packages
available for packet. They do internet style Email, internet style ftp
file transfers, and have telnet capability. They are fully interoperable
with the internet, so gatewaying would be automatic. Some of the NOS systems
also have a built in BBS if you really want to use that. I think that
approach is better than an old BBS and the antiquated YAPP protocol.

> full duplex mode so i don`t need the swithing of transmitters wich is
> requiered when working simplex.

I'm not aware of any of the packet modems doing automatic speed switching
according to conditions. For HF and MF, packet, as currently done, isn't
a very good way to go anyway. You should consider using Clover II or Pactor II
instead. They are robust protocols for the HF and MF channel, and can
negotiate to suit conditions. There's a nice BBS system called Aplink
which you can use with them.

These systems could be used on VHF too, but they won't offer the speed
that VHF packet can give you, and channel conditions usually aren't so
bad that you need the additional robustness offered by Clover or Pactor.

> I also want to know the formula for calculating maximum speed due to band-
> with.

This is complicated. There are several modulation forms, such as FSK, MSK,
PSK, QPSK, M-ary SK, etc. And these may be double modulated, IE for packet
the usual method is AFSK over FM. That's a horrible bandwidth hog, but it
is simple and works for low speed packet data at VHF with voice radios.
The other methods are generally direct modulated. Each form has its own
occupied bandwidth equation. And then there is symbol overloading, which
can encode more than one bit per baud at the cost of needing a better
SNR. And there's the overhead of the protocol which has to be factored
in to get the effective data rate. It would take a book to detail all
the various factors which determine bandwidth for a certain data rate.

If you really want to know, I can recomend some books, or even post and explain the formulas for some of the more popular modulations.

Years ago in the "Pre-Packet" days, there was a article in one of the mag's (73, QST... not sure which one it was) about a RTTY group that used Sub Audible tones (PL's) instead of the standard tones to allow voice and RTTY to coexist -simultaneously- on a repeater. At that time the PL tones were sensed by mechanical reeds so I would assume that would limit the baud rate, but with the decoders available now it might be a fun project.

Actually, using DSP filtering, you just might be able to use the standard paket tones on the repeater input and let the DSP detect/filter them and toggle a PL tone generator that would be used on the output to allow voice at the same time. Then reverse the process on the user end.... convert the PL's back to standard tones, or it would be easier to just use the TTL switching output of the PL decoder to directly feed the TNC at the same point it's tone decoder does.

Of course, this is just a thought. Many more things would have to be taken into consideration to determine if this would work, but it just might fly.

For ordinary 1200 and 2400 baud packet, that's about it. You have to lengthen your TxD a bit to allow the repeater time to key up, but otherwise you just treat it normally. Setting the repeater for zero hang time can help if your users are using carrier squelch, but if they are using data squelch, then you can play with the Axhang parameter to speed up operation.

Now you can use a bit regenerator at the repeater. This doesn't really help reliability much in practice, but it does keep voice users off the repeater.

For 9600 baud and above, the situation gets more complicated. An ordinary voice repeater won't pass those signals properly, and will have to be modified. If you can get the received signal direct from the discriminator, and feed that directly to the modulating varactor of the transmitter (direct FM transmitter assumed), then that can work. Everybody has to be careful with their deviation and passband shape factors for it to work well, however. It might be worthwhile to add a bit regenerator in this case to clean up some of the nastier signals.

For higher speeds, you're going to be doing direct FSK, and a bit regenerator will be needed.

There is/was a driver for the Baycom that was written specifically for
Windows. I've ran it in Win 95 and it actually worked. I can't recall the
name of the author but I do remember he had a Web page in the UK. The
version I got from him was an alpha (or beta?) version for testing. He
thought he would release a final version after it was tested more. I run
packet from a 386 (with DOS) that doubles as a doorstop so never followed
up to see if a newer version was ever released. Since I've not seen more,
it might not have worked as well on other systems as it did mine, or the
guy found something else to do.

I was playing with writing a Baycom driver for Windows when I came across
one already written and so immediately lost interest. I did get far enough
to convince myself it could be done. I was also designing a standard serial
port converter for the Baycom but ended acquiring a glider (an
18 meter experimental class HP-14 :)) and have been spending all my free
time trying to get it back to an airworthy condition. I know I could buy a
'real' TNC with a lot less effort and no more money than the Baycom, but
this is what I like to do. BTW, I even designed/etched the PCB I built my
modem on.

It certainly should work. I'm currently using a Linux machine as a gateway (router) to put a FreeBSD system on the air. You have to remember to turn on the IP forwarding option when installing the Linux kernel.

FWIW, my Linux router machine is a 386SX-20 with 4MB, an ethernet card, a DRSI SCC card, and mono graphics. It's diskless, and boots from the FreeBSD system. My main reason for switching to a Linux-based router was to easily run network monitoring daemons and keep all the log files on the "production" machine.

Most dual banders (and most single banders) make poor 9600 baud rigs.
A big limitation it TR switching time - wastes a lot of time compared
to the time typically spent sending data.

Rock bound rigs seem in order and this isn;'t the only factor.

: and do >56kb to P3D (eventually) and around town.

: What are the issues?

The first issue is that a dual bander usually can't switch bands under
TNC control. Don't expect to transmit on more than one band.

: Can a dual bander take the output from something
: like a GRAPES modem? Can I even do this? Computer -> GRAPES -> dual
: bander -> xverter If so, what rig would do this?

No, a dual band radio won't interface with a GRAPES modem: the GRAPES
unit produces RF, not audio. Leave the dual band radio out of your
plan: with a transverter, the GRAPES unit will do 56K.

: Dave Covert, KB5GOG

: Very funny Scottie... now beam down my clothes...

... and send my hairpiece with them!

2140. 80 Meter frequencies for Digital operations

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-26 00:00:00 UTC
From: Art Jeyes <Art.jeyes@jhuapl.edu>
Message-ID: <3180CF32.C8C@jhuapl.edu>
Source record: 37430

A friend of mine (KC4KMY) and I have recently started to experiment with Clover vs. Pactor throughput on 80 meters. We have been coordinating via voice channels and using a quiet frequency in the 3600 to 3700 area. We have been having problems with intentional interference almost every time we start working. People bring up carriers on the frequency we are on and sweep them back and forth through our signals making it almost impossible to collect any meaningful data.

Are there parts of the 80 M band that are not as "unfriendly" towards digital operations?

Art -- AA3GU

Hi John.

Numerology is where you find it!

Examining the numbers listed in the "Organization" heading of your original posting, we find highly relevant information!

the numbers are: 800.444.1458

Obvioulsy the 800, being the prefix of toll free calls, doesn't count.

The 444, on the other hand, is VERY inportant. Note that each number in 444 is exactly 2 away from each number in 666!

The last sequence of numbers also contains meaning. add: 1+4+5+8 and you get 18. Note that the 1458 could be viewed as the first in the sequence of numbers, when read backwards. You can therefore add another 1, ending up with 19.

So we have a as a result the number 2, and the number 19, which, when interpreted as the positions of letters in the alphabet, give you BS, perhaps the most important thing that can be said about numerology!

Absolutely... any machine running a xNOS can serve as a gateway router for
your station, as long as it supports a commomn LAN media with your
workstation (i.e. ethernet, SLIP. PLIP or whatever). I used to use a
macintosh running NET/Mac with two machines connected with LocalTalk. Now
though I swapped out the Mac router for Linux with TNOS (although you
could just use Linux if you have AX25 and KISS compiled in the kernel).

sounds like a great way to spark some hostility to packet. packet
bursts may sound like music to your ears, but i don't think most
people on voice repeaters want to listen to them in between their
conversations.

2146. RF into TNC with RS HTX 212 :(

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-26 00:00:00 UTC
From: garyn@tir.com
Message-ID: <31811284.10372078@news.tir.com>
Source record: 37436

Hello,
I'm using a RadShack HTX 212 for packet and on xmit the red xmit led (on the TNC)as well as the green rvc led comes on, thus indicating I'm getting RF back into the TNC. The culprit appears to be the (Unshielded) telephone type cable that runs from the mic input to the TNC.
I've tried torroids with no succes and I wonder if anyone has a 'cure' or knows where there are any Shielded cables with the telephone type quick connection fittings ? I had to get this cable from a friend who works in the Alarm business as R/S didn't have any seperate cables at all for this rig :(

TIA

> internet? If so, where can I gt [sic] it? Is there an easier way? HELP!

Here's how you do it:

1. Configure a pc with MS-DOS 6.22 and JNOS 1.10m.
2. Configure JNOS to use an Ethernet Packet Driver (Crynwr Packet Driver) and
a serial port.
3. Add the JNOS ethernet address to your DNS/Router
4. Add the JNOS Ampr network to your router.
5. Join a gateway group.

That's all there is...

Don't get roped into TNOS or Linux yet. They're both not ready for prime time.
TNOS is really just a BBS, Linux crashes with most 1.3x kernels using AX.25.

A lot of people have those surplus Trimble GPS receivers, the white mushroom shaped kind, but the 7 pin connectors that fit the bottom are rather hard to find.

We are putting together a group order because we need several connectors but the minimum purchase is 25 connectors. So we want to find a few other people that would also like to buy one or more and help us get a large enough order.

They are Connexall 7-pin twist on connectors for the Trimble GPS "Smart Antenna" (Model 18636). The cost will be $7 each, or three for $20. Send email to me (garym@cts.com) or J Goldberg (j@races.sandiego.ca.gov).

San Diego County RACES <http://www.cts.com/browse/garym/races> has several of these GPS receivers that we are planning to make cables for if we can get some connectors. Email preferred but if you can't email, call J at 619-693-9046. Once we get enough commitments we'll place the order.

>would be the same ether way. So the decision to go with 16:9 was made,
>this fits most film aspects today. As was the case with 4:3 ratio when
>television was invented back in the 50's.

The current (PALplus) move to 16:9 is clearly driven by manufacturers
who are faced with market saturation of TV sets, and need something new
to be able to sell...
With a 4:3 TV you will have black borders on top and bottom of picture
when a movie runs, with a 16:9 TV you have black borders left and right
for most everything else... not much difference.

The 16:9 ratio also does NOT match movie aspect ratios, but you already
state that yourself.

>analog. But now that things are going digital, that does not matter. Also,
>the decision has been made that television stations will broadcast on two
>channels, one in NTSC and the other in HDTV. Thus simulcasting the same
>programing on two channels.

It looks like there won't be much simulcasting here, but rather the
stations will first convert to digital and then to HDTV later.

>My prediction is that most of the extra channels will be waisted on more
>of the same. Such as multiple viewings of the same show at different
>times. As the show runs through the time zones. More of "The Nanny", Blah!

As I said, the problem with TV is not with the hardware.

>Steve Sampson, N5OWK

Yep, almost exactly the way I did it. I use a jnos 1.10m compile that
just has smtp, domain server, ethernet, and PPP plus dialer in it.
Runs fine on a 286 with just 640k. Acts as a store-and-forward for
incoming smtp email if the rest of the LAN is down, too.

I run another and much more capable jnos 1.10m on a 386dx-40 in one
Windows 3.1 dosbox (QEMM-8.01 for a memory manager) and FBB in
another. Also have a G8BPQ Switch on the same machine, with both jnos
and FBB interfaced to it. Although jnos and FBB could link to each
other via the FBB, I only move messages between them that way if
someone wants me to "convert" ax25bbs messages into smtp email and
vice versa. For forwarding over Internet, I use a more efficient
method that involves the FBB Cron Server running a .BAT file that
attaches a smtp header to an FBB export, moves it over to the jnos
mqueue directory, and jnos then ships it off over Internet. Incoming
Internet forwarding goes to the appropriate jnos Area, and the FBB
Cron Server "sees" the <Area>.TXT file pop into being, copies it over
to where FBB can import it and then deletes the jnos Area so that the
next incoming can be detected. There's some carefull considerations
to avoid file-share errors, but that's the basic method I use to get
and send high volume bulletin (not much personal) ax25bbs traffic to
sysops who, like me, want everything but don't want to add to local

radio congestion or maybe they have really terrible netrom links.
It's all automated on my end, I don't usually have to lift a finger.

It was the need to lighten the 386 cpu load that had me move the modem handling over to the 286 and ethernet the 286 to the 386. FBB 5.15c is rather cpu intensive during imports (not so bad on exports). Not only sped things up quite a bit on the 386, but also increased my modem throughput. Ethernet ftp throughput between the 2 jnos I benchmarked at 84.45k bytes (not bits) per second, optimum, and smtp between the two machines appears to be almost as fast. I also gained the ability to use a winsock on the 386 without having to take down the jnos running on the 386 at the same time (but I do take down FBB while running the winsock, because 5megs RAM just isn't enough).

It's a lot of fun, after it's all set up and there's nothing to do but enjoy the rewards of all the previous work! :)

A ham firend of mine will be sailing in the Carribbean for a few years. She is a new General class and has an HF transceiver. She is thinking about getting a TNC and wants to be able to send and receive messages to an HF digital node.

The objective is to have the equivalent of e-mail contact with ham friends while sailng.

I have heard about stations that operate on HF and operate like a bulletin-board-system. They are on most of the time and will store and forward messages. Does anyone have any references to this such as frequencies, callsigns, and protocols used?

>there another way?

Microwave is not specificly required - about a 100 kHz window of spectrum is needed. You may find this in the 222 and 420 MHz bands, depending on how heavily used each is in your area.

I beleive that Paccom has mentioned that one of their products can be configured for 56k. Not sure how compatible it would be with the Grapes modem. It would require replacing the IF filter in your receiver (at a minimum) for the wider bandwidth.

>Is there a way to do it using a dual bander (2m/70cm) and some
>transverters?

Not really.

>I would like to run 9600 and voice to satellites with
>the dual bander and then move on up the spectrum with the xverters
>and do >56kb to P3D (eventually) and around town.

>What are the issues? Can a dual bander take the output from something
>like a GRAPES modem? Can I even do this? Computer -> GRAPES -> dual
>bander -> xverter If so, what rig would do this?

The Grapes modem sends and receives at about 30 MHz. There is no "audio" input or output in the design. It's designed to connect directly to a transmitting converter and a receiving converter (or transverter), eliminating the "dual-bander" module from your diagram. So unless your radio does its modulation at about 30 MHz and then converts that to the desired operating frequency, there's no way to substitute a Grapes modem for a 1200/9600 type "audio" modem.

On the other hand, you potentially could build up or convert a 30 MHz NBFM transmitter and receiver and use that to connect to the transverter. That would allow you to switch between the two signal types while continuing to use the transverter. Unfortunatly there are not many transverter (or TX and RX converter) options that have switching times optimal for data rates as fast as 56 kB. Keep listening/looking, tho. A group in Vancouver, BC, Canada is doing good things in this area.

That's what PL encoding (at the repeater Tx site) is for. The repeater transmits PL when it hears PL (voice) and transmits no PL when it hears only carrier (packet.) Then, voice users decode the PL on their receivers.

It works for me!

Hello! I've got some awesome news that I think you need to take two minutes to read if you have ever thought "How could I make some serious cash in a hurry???" , or been in serious debt, ready to do almost anything to get the money needed to pay off those bill collectors. So grab a snack, a warm cup of coffee, or a glass of your favorite beverage, get comfortable and listen to this interesting, exciting find!

Let me start by saying that I FINALLY FOUND IT! That's right! I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level marketing, mail-order schemes, envelope stuffing scams, 900 number scams... the list goes on forever. I have tried every darn get rich quick scheme out there over the past 12 years. I somehow got on mailing lists for people looking to make money (more like 'desperate stupid people who will try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days, SO I THOUGHT.... I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe an tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail' for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me

To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world -Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY, EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE

DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the most detailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I

assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be 3, 5 will be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!!
If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then
choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no

paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!" You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE

CASH IS ON ITS THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

9. (This step added by Charles Reiley). Hello, This is exciting isn't it?! While I'm on the list, just add a note saying "Please include extra money tips" with your name & E-MAIL address, and I will (FOR FREE) send you some neat methods to increase the money you will receive with this plan.
Why?... Why not? I'm not a selfish jerk...I like helping out others. E-mail just makes it a touch easier and cheaper, too! After I drop off the list, I can no longer offer you this advice, obviously, but maybe someone else who gets my tips will offer and simply replace my name on this step number 9. Good luck and give this plan your all, it will definitely pay off!
Like Mike said, HAVE FUN WITH IT!!!

In theory it can be used, but practice is a different thing.
You will have to write a driver for it. When you have no experience
with that, it is better to forget about it.
When you have experience with device driver writing, you could try
adapting the driver for an HAPN-1 card that also used the 8273.
One should be included in the different versions of NOS.

>packet mail a file.

When you think packet is slow, consider upgrading your packet station
to be a bit more state-of-the-art.
Today, speeds of 9600 bps are common, and 56kbps is possible as well.

Using the Internet instead of a lousy packet link is like making a
phonecall to that rare DX country instead of working it on HF (or
via amateur satellite).

If you want to use tcp/ip services over the internet, you should either

Compile a kernel with ax.25 enabled and use the appropriate
ax25-utils package.

or

Use one of the Linux tcp/ip software packages, such as TNOS or WAMPES.

Look at the gateway FAQ at minnie.cs.adfa.oz.au.

>73, kb8vba

The baycom software is superior and if you register it, it is only
20 dollars. It allows full unattended binary and ascii file transfers
amd runs on old boat anchor type computers (like most of
us have). As many pointed out, the software is very very
user friendly and beginners will be up and running in a matter
of minutes, and even doing multiconnects.

Note that baycom 1.6 software will run on a conventional tnc
in kiss mode, and since the tnc does the decoding, and
some slight buffering of data, baycom software will run under
windows!

Please note, there are many types of baycom modems. The
one everyone knows about is the Tigertronics unit. But, the
Paccom units are smaller, use less power and decode beter on RX.

73 and GL...Art...

I have used ver 1.6 on an old kpc-2 and a tnc2 clone.

:
: Don't get roped into TNOS or Linux yet. They're both not ready for prime time.
: TNOS is really just a BBS, Linux crashes with most 1.3x kernels using AX.25.

I'll tell you from many years of actual experience and setting up of many gateways for myself and others that you shouldn't get roped into running any DOS based version of NOS (such as JNOS) to run as a gateway if you intend to run any kind of applications on it. If all you want is to just run a router with NO BBS services, convers bridge, etc.... then a DOS based system will work, but the moment you run a BBS or a convers server will be the death of the gateway and the constant struggle to keep it running. This is why I ported the IPIP daemon to Linux a while ago and dumped JNOS. Gateways that run JNOS have a serious problem of crashing constantly. There is NO reason for any BBS to ever have to shut down or reboot at all, this includes housecleaning. By running some flavor of Unix solves that problem and increases reliability big time. If you ever notice which systems around the world are the main convers server hubs, they are all Unix based. The next ones are usually TNOS for Linux because of it's high reliabilty over JNOS or any other DOS based NOS (TNOS for DOS isn't too good either, but the Linux version is stable). On the 1.3.x kernels, you have to find a good one. I've run stable 1.3.x kernels and have have zero failures, buggy versions though can cause problems. Just ask which ones are good and stable and run that one (look at the patch files, when you see a patch suddenly get very large you run the version right before it, it's usually very stable).

I started out on a DOS based system several years ago, switching to a Linux based router and server was the best thing I ever did, and everyone else that has done so will agree with it. The only ones that won't agree are the ones that have something wrong or did something wrong and can't get it to work. The ones that work don't crash and usually have months of uptime before they manually reboot it to change something.

You're almost surely correct about using Unix over other operating systems, but I'd blame the operating system before blaming jnos for stability problems. Up to version 1.10m of jnos, I had stability problems (memory leaks, mostly) but 1.10m has proven very stable for me. I tried the latest version of TNOS too, but didn't have to do much beond running it to see that if it ever was serious competition to jnos then it isn't so anymore ... used more memory to do much less.

I have a specialized jnos running on 640k 286 that just acts as the modem controller, smtp store-and-forwward, a wanna-be domain server (the domain server is stable but needs a full rework for reasons having to do with features), and modem-to-ethernet bridge. It also has ftp, but that's just for remote sysop usage. Works very well.

In a 386dx-33/40 5megRAM DOS-6.2/G8BPQ/QEMM-8.01/Windows-3.1 dosbox environment, I run a jnos that does what the 286 one does, except it does not use comm ports (the BPQ Switch does use comm ports). It has a full-service BBS, which I only use for mailing lists (like for getting the nos-bbs techincal jnos email). It has no converse, since jnos is written to run in only within the 1st meg of RAM and one can only support so many "features" before starving jnos for memory space -- THE reason for jnos instability, in my opinion). If I wanted converse, I'd put another jnos box up for that purpose onto the LAN (another 286 ought to handle it).

I also run FBB 5.15c in another dosbox on the 386, concurrent with jnos. This version of FBB is not nice with memory above 1meg and

tends to overstep its limits, causing problems with other apps that also vary their usage of non-conventional memory space. So I tend to take FBB down (but not jnos) when I use winsock applications.

On both the 286 and the 386, having to reboot now and then is a fact but not one I've been able to blame on jnos (anymore). Operating system (generally the memory manager) problems seem culprit now. If I just run jnos alone on the 286 and 386, I've no problems unless there's a power outage or burp of some kind, it seems. I've been running jnos for around 5 years, and indeed it now seems stable unless one starves it for memory -- if jnos gets below around 60k or so is when I see things start to get shaky on my 2 systems that run it.

I find that jnos is a cost effective solution, especially if used on a LAN, for accessing internet as well as amateur radio in all its flavors, without having to learn Unix (one really has to be serious to learn Unix!) and without having to give up a Windows environment. It's stable enough for me that I move megs of amateur radio traffic (primarily bulletins, I discourage personal mail) over Internet to other hams who suffer from rotten radio links (and who don't have the funds to upgrade the whole network to high speed for everyone, which is most of us!) or who just wish to not congest radio space any more than necessary to move a zillion SALE@ALLUS* bulletins every day. <g> FBB and JNOS do this 100% automatically for me, since they coexist on the same computer. I just let each do what it's best at doing ...

2183. New Windows 95 Baycom Driver Software

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-28 00:00:00 UTC
From: jon@g7jjf.DEmon.co.UK
Message-ID: <gqebMFAKV8gxEwaM@g7jjf.demon.co.uk>
Source record: 37373

Hi All,

As you may be aware, I am writing a Windows 95 Multiuser/Multiport Terminal Driver program which supports both KISS mode TNC's and Baycom modems simultaneously. The initial version wasn't too reliable working with Baycom modems so I have spent the last two weeks rewriting the Baycom hardware driver as a 32bit VxD. After many sleepless nights and hours of frustration at the keyboard, I have eventually got it working.

Using a VxD means the hardware interrupts generated by the Baycom modem get serviced almost immediately unlike current Baycom programs running in DOS windows or using TSR drivers. So packet reception and transmission
is much improved, virutally as good as a native DOS program.

The TNC driver side of the program is based on a mixture of my MUBAY102 and MUTNC205 programs so people already familiar with this software should have no trouble getting it up and running.

If anyone would like to try out this new program, it can be downloaded from my WWW homepage given below.

The program is still under development so any feedback would be greatly appreciated.

Bye for now,

Jon.

Then you have to use the "rtty terminal" connector. The connections
via ACC2 remain connected, of course.

2190. Optical Packet

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-04-29 00:00:00 UTC
From: mike@phoenixx.demon.co.uk
Message-ID: <318503dd.5504900@news.demon.co.uk>
Source record: 37380

I am trying to establish an optical data link through air of around 750 meters. The TX is a 100mW argon ion laser runing at around 500nM (blue/green) although other wavelengths could be tried. Rx is whatever I can get my hands on in the way of fast and sensitive photcells. The link runs ok at audio using around 40 percent AM, although the plasma tube in the laser runs at around ten amps so is not easy to modulate quickly.
My problem is the modem and software. From reading the newsgroups I think that the packet setup is ideal, it will interface to my pc and provides an audio output to the modulator. I can arrange that the tx/rx switching drops a brick in front of the beam when required :-)
I am very confused by the multiplicity of the software / hardware available. Can anyone advise as to a combination that will definately work together. TNC's are too expensive (I have to set up both ends of the link and pay a 20 Amp electricity bill) so it needs to be a simple modem with the PC doing all the work. Should the software happen to run in win95 I should be a happy man.
Any help, support, jokes and information gratefully received.
Cheers
Mike

Source record: 37388

Good day, all!

I am trying desparately to get a packet program, ANY packet program, to run on my Amiga system. I currently have an A2000 (68030), and a KPC-3 TNC. For some reason, I cannot get any packet program to run satisfactorily on the Amiga. I have tried AmiCom v2.2, and it will not SYNC properly. (I have tried both HOST and KISS modes.) AmiPac works OK, but it has this nasty habit of randomly repeating portions of previously sent packets. Drives the guys at the receiving end absolutely NUTS! hehehe... Of course, I don't see it at my end. Today, I tried a CBBS program that was re-ported to the Amiga, again with no luck.

I currently run my KPC-3 with an A2088 XT Bridgeboard, and that runs OK, but I'd really like to get 9600 baud serial port speeds (the Bridgeboard is only 1200).

Are there any patches for AmiPac to fix the repeating problem, or can someone help me to configure for AmiCom or CBBS?? Or maybe you can recommend another program - hopefully with English-language docs?? ;-)

Thanks all!!

73 de Mark - N9WYS

Honestly - I really DO love my Amiga!!

... What was the greatest thing before sliced bread?

I don't know what kind of backlighting the Tandy uses, but I do know that the current TFT LCDs use fluorescent tubes which are even spec'd to have a specific lifetime -- like most fluorescent tubes, they go dim with age so you might be off track with the ...either work or they don't hypothesis. The tube is usually along the side of the display and is directed into a sheet of plastic that acts as a light pipe to distribute the light around the display. There is a little high voltage supply for the lamp -- so watch your fingers. Usually they are replacable. You might contact Tandy for a part number and cost if it is indeed a tube.

Some displays use electrolumenescent plates and I don't know what the story is on them with age.

Hope that this is helpful....

Hello ALL!
I have decided to get out of packet radio, so I am going to sell my TNC. I hate to part with it, but I need the money for other things. I bought this TNC about 1 year ago. I am please with the TNC's performance on both 1200 & 9600 baud. I love the Node! It is great, if you know anything about the node that it has built in with the 6.0N rom chip, then you know what I am talking about. The Node, is a full featured node with cross port connections. You can hook this tnc up to two radios or have both ports on one radio. You can run 9600 & 1200 simutainously (sp) on one or two radios. The tnc also has GPS capabilities which is an added feature. Again, the TNC works absolutly great. It includes the original manuals and box. Includes the old rom chip, when I upgraded. Include 32 k mailbox, AC adapter, and all other papers I acquired while I had the TNC. I am asking $165.00 firm + s & h.
If interested please CALL ME AT (540) 890-6782 5 p.m.-9 p.m. EST or leave a message anytime. Ask for BEN or leave a message for BEN

> wouldn't be hard to find

We bought ten Grids for use as Mobile Data Terminals in police cars as Grid was sold to AST. We never got the PCMCIA drivers for any of them and AST wasn't willing to lift a finger. Phooey on AST. You bet we won't run AST computers.

Tandy in Fort Worth or Dallas will service Grids. You might have a problem getting parts but I suspect that's the last source. You can get their number through a local Radio Shack or perhaps with something like "tandy.com".

Gary,

Grounding the shield on both sides? Wouldn't that cause problems with a
ground loop? I don't know much about electronics, but this would seem like
a ground loop to me?

Hi Dave

KS>>I have seen references to running TCP/IP from Windows by usuing a 386
>>DOS machine as a gateway. Does a simular solution exist for running
>>TCP/IP from Windows using a Linux machine as a gateway?

You could run TNOS or JNOS on your Linux PC and use Windows with a
winsock (like trumpet TCPMAN or the one that is include in Windows95)
configure a PPP port or use a FTP packet driver with your network
adapter on your windows machine and link it to the Linux Box

It's easy to do

HD-4040 J3 Connector Pinouts:
Pin 3 - Audio Input
Pin 4 - Transmit Key Line (PTT)
Pin 5 - Transmitter Audio
Pins 6 thru 9 - Common

Yes, it is a TNC1. Was my first TNC, and I still have it here on the
shelf in working condition!

>
>73 de Bill N2CQR/HI8
>
The backlight in the 1400LT is a electroluminesient (spelling?) panel.
These do not just quit, but after many hours of operation have the
light output decline. I have an old ge el panel from the early 60s and
it still works. Of course you have to be in a verrrry dark room, and get
right up to it<G>. I used to have a 1400Lt, but gave it to my sister
(she uses it as a word proc) after I fried the RS232 i/o port. It is
a real nightmare to get apart. I would not open one up unless I had to.
The local RadioShack computer store gave me a photocopy of the diagram,
so service manuals do exist. But I would be surprized if Tandy still
had the EL backlight in stock.
Good luck

2210. RTTY software for PC

Folks,

I'm searching for PC software to demodulate RTTY and Morse. Ideally, this would be downloadable shareware or freeware for Windows 95 (although Win 3.x or even DOS software would be acceptable) and not require any additional hardware between the PC and receiver. If a software-only solution is not considered practical, please recommend an inexpensive interface I can purchase as I can not built any circuits due to color-blindness.

Any and all information and suggestions appreciated! Thanks.

Yes, I bought it. The program is pretty good and certainly worth the $79.00. My first impression, after entering my registration number, was "where did these features come from?" since the program was much better after registering. I understand his desire to be compensated for his work (we all should be so lucky). Generally speaking I am a little tight fisted but feel this program, for the KAM+, was really worth it. I would have more readily grabbed it at $39.95, but then, who can say what is a good price. It certainly ranks up there with PakRatt for Windows. His latest version, by the way, allows more time on the receive/non-transmit side to check out the features. GL

First of all you will need the Psion Serial Lead. Unfortunately,
this expects to be connected to another host e.g. a PC for file
transfer. Therefore you will need a null modem to do a
crossover. I've done it by just crossing over TX and RX and
connecting signal ground.

Beware that the psion can generate quite a lot of RFI if
your going to use it with a hand-held

Haarp: High-Frequency
Vandalism in the Sky

A review of Angels Don't Play This HAARP by Dr. Nick Begich
and Jeane Manning Reprinted from Nexus, December
1995 January 1996

Technonet, the protest form of the 1990s: picketing on the
information highways. For example, a fast-growing assortment
of men and women
around the world are using the Internet (started by the U.S.
military for information transfer and exchange that would
never be interfered with) to
draw attention to a questionable military project in Alaska.
These Internetting, e-mailing, faxing folks are blowing
holes in the U.S. Department of
Defense secrecy wall by using the government's own system.

The printed-word part of the protest started when Dennis
Specht, an antinuclear activist then living in Alaska, sent
a news item to Nexus on the
topic of HAARP the High-frequency Active Auroral Research
Program. Then, an Alaskan political activist and science
researcher in
Anchorage, Nick Begich, networked with Patrick and Gael
Crystal Flanagan, who are self-described "technomonks"
living in Sedona, Arizona,
and was told to check out that same Australian-based
magazine. Begich was surprised to see an item from his
hometown in Nexus and
immediately headed to the local library to dig out the
documents cited in the article.

That research led to articles and the book Angels Don't Play
this HAARP: Advances in Tesla Technology, which is 230 pages
of detailed
information on this intrusive project. This article will
only give highlights. Despite the amount of research (350
footnotes), at its heart it is a story
about ordinary people who took on an extraordinary
challenge.

HAARP Boils the Upper Atmosphere

HAARP will zap the upper atmosphere with a focused and
steerable electromagnetic beam. It is an advanced model of

an "ionospheric heater."
(The ionosphere is the electrically charged sphere
surrounding Earth's upper atmosphere. It ranges between
about 40 to 600 miles above
Earth's surface.)

Put simply, the apparatus for HAARP is a reversal of a radio
telescope: antennas send out signals instead of receiving.
HAARP is the test run
for a superpowerful radio-wave beaming technology that lifts
areas of the ionosphere by focusing a beam and heating those
areas.
Electromagnetic waves then bounce back onto Earth and
penetrate everything living and dead. HAARP publicity
gives the impression that
the High-frequency Active Auroral Research Project is mainly
an academic project with the goal of changing the ionosphere
to improve
communications for our own good. However, other U.S.
military documents put it more clearly: HAARP aims to learn
how to "exploit the
ionosphere for Department of Defense purposes."
Communicating with submarines is only one of those purposes.

Press releases and other information from the military on
HAARP continually downplay what it could do. Publicity
documents insist that the
HAARP project is no different from other ionospheric heaters
operating safely throughout the world in places such as
Arecibo, Puerto Rico;
Troms, Norway; and the former Soviet Union. However, a 1990
government document indicates that the radio frequency (rf)
power zap will
drive the ionosphere to unnatural activities: "At the
highest hf powers available in the West, the instabilities
commonly studied are approaching
their maximum rf energy dissipative capability, beyond which
the plasma processes will 'run away' until the next limiting
factor is reached."

If the military, in cooperation with the University of
Alaska, Fairbanks, can show that this new ground-based "Star
Wars" technology is sound,
they both win. The military has a relatively inexpensive
defense shield and the university can brag about the most
dramatic geophysical
manipulation since atmospheric explosions of nuclear bombs.
After successful testing, they would have the military
megaprojects of the future
and huge markets for Alaska's North Slope natural gas.

Looking at the other patents which build on the work of a Texas physicist named Bernard Eastlund, it becomes clearer how the military intends to use the HAARP transmitter. It also makes government denials less believable. The military knows how it intends to use this technology, and has made it clear in their documents. The military has deliberately misled the public through sophisticated word games, deceit and outright disinformation.

The military says the HAARP system could:

- give the military a tool to replace the electromagnetic pulse effect of atmospheric thermonuclear devices (still considered a viable option through at least 1986);

- replace the huge Extremely Low Frequency (ELF) submarine communication system operating in Michigan and Wisconsin with a new and more compact technology;

- be used to replace the over-the-horizon radar system that was once planned for the current location of HAARP with a more flexible and accurate system;

- provide a way to wipe out communications over an extremely large area, while keeping the military's own communications systems working;

- provide a wide-area Earth-penetrating tomography which, if combined with the computing abilities of EMASS and Cray computers, would make it possible to verify many parts of nuclear nonproliferation and peace agreements;

- be a tool for geophysical probing to find oil, gas and mineral deposits over a large area; and

- be used to detect incoming low-level planes and cruise missiles, making other technologies obsolete.

The above abilities seem like a good idea to all who believe in sound national defense and to those concerned about cost-cutting. However, the possible uses which the HAARP records do not explain, and which can only be found in U.S. Air Force, Army, Navy and other federal agency records, are alarming. Moreover, effects from the reckless use of these power levels in our natural shield – the ionosphere – could be

cataclysmic, according to some scientists.

One Alaskan puts it bluntly. A founder of the NO HAARP movement, Clare Zickuhr, says: "The military is going to give the ionosphere a big kick and see what happens."

The military failed to tell the public that they do not know what exactly will happen, but a Penn State science article brags about that uncertainty.
Macho science? The HAARP project uses the largest energy levels yet played with, by what Begich and Manning call "the big boys with their new toys." It is an experiment on the sky, and experiments are done to find out something not already known.
Independent scientists told Begich and Manning that a HAARP-type "skybuster" with its unforeseen effects could be an act of global vandalism.

HAARP History

The patents described below were the package of ideas which were originally controlled by ARCO Power Technologies Incorporated (APTI), a subsidiary of Atlantic Richfield Company, one of the biggest oil companies in the world. APTI was the contractor that built the HAARP facility.
ARCO sold this subsidiary, the patents and the second-phase construction contract to E-Systems in June 1994.

E-Systems is one of the biggest intelligence contractors in the world, doing work for the CIA, defense intelligence organizations and others.
Eighteen billion dollars of their annual sales are to these organizations, with $800 million for black projects – projects so secret that even the United States Congress isn't told how the money is being spent.

E-Systems was bought out by Raytheon, which is one of the largest defense contractors in the world. In 1994 Raytheon was listed as number 42 on the Fortune 500 list of companies. Raytheon has thousands of patents, some of which will be valuable in the HAARP project. Twelve patents are the backbone of the HAARP project, and are now buried among the thousands of others held in the name of Raytheon.

Bernard J. Eastlund's U.S. Patent #4,686,605, "Method and Apparatus for Altering a Region in the Earth's Atmosphere, Ionosphere, and/or Magnetosphere," was sealed for a year under a government

secrecy order.

The Eastlund ionospheric heater was different: the radio frequency (rf) radiation was concentrated and focused to a point in the ionosphere. This
difference throws an unprecedented amount of energy into the ionosphere. The Eastlund device would allow a concentration of one watt per
cubic centimeter, compared to others only able to deliver about one millionth of one watt.

This huge difference could lift and change the ionosphere in the ways necessary to create futuristic effects described in the patent. According to
the patent, the work of Nikola Tesla in the early 1900s formed the basis of the research.

What would this technology be worth to ARCO, the owner of the patents? They could make enormous profits by beaming electrical power,
without wires, from a powerhouse in the gas fields to the consumer.

For a time, HAARP researchers could not prove that this was one of the intended uses for HAARP. In April 1995, however, Begich found other
patents connected with a "key personnel" list for APTI. Some of these new APTI patents were indeed a wireless system for sending electrical
power.

Eastlund's patent said the technology can confuse or completely disrupt airplanes' and missiles' sophisticated guidance systems. Further, this
ability to spray large areas of Earth with electromagnetic waves of varying frequencies – and to control changes in those waves – makes it
possible to knock out communications on land or sea as well as in the air. The patent said:

"Thus, this invention provides the ability to put unprecedented amounts of power in the Earth's atmosphere at strategic locations and to maintain
the power injection level, particularly if random pulsing is employed, in a manner far more precise and better controlled than heretofore
accomplished by the prior art, particularly by detonation of nuclear devices of various yields at various altitudes. . .

"It is possible not only to interfere with third-party communications but to take advantage of one or more such beams to carry out a

communications network even though the rest of the world's communications are disrupted. Put another way, what is used to disrupt another's
communications can be employed by one knowledgeable of this invention as a communication network at the same time.

"Large regions of the atmosphere could be lifted to an unexpectedly high altitude so that missiles encounter unexpected and unplanned drag
forces with resultant destruction. . . .

"Weather modification is possible by, for example, altering upper-atmosphere wind patterns by constructing one or more plumes of atmospheric
particles which will act as a lens or focusing device. . . . Molecular modifications of the atmosphere can take place so that positive environmental
effects can be achieved. Besides actually changing the molecular composition of an atmospheric region, a particular molecule or molecules can
be chosen for increased presence. For example, ozone, nitrogen, and other concentrations in the atmosphere could be artificially increased. . .
." Begich found eleven other APTI patents. They told how to make "Nuclear-sized Explosions without Radiation," power-beaming systems,
over-the-horizon radar, detection systems for missiles carrying nuclear warheads, electromagnetic pulses previously produced by thermonuclear
weapons and other "Star Wars" tricks. This cluster of patents underlays the HAARP weapon system.

Mental Manipulation

Related research by Begich and Manning uncovered bizarre schemes. For example, U.S. Air Force documents revealed that a system had
been developed for manipulating and disrupting human mental processes through pulsed radio-frequency radiation (the stuff of HAARP) over
large geographical areas.

The most telling material about this technology came from writings of Zbigniew Brzezinski (former National Security Advisor to President Carter)
and J.F. MacDonald (Science Advisor to President Johnson and a Professor of Geophysics at UCLA), as they wrote about use of
power-beaming transmitters for geophysical and environmental warfare. The documents showed how these effects might be caused, and the
negative effects on human health and thinking.

The mental-disruption possibilities for HAARP are the most disturbing. More than 40 pages of the book, with dozens of footnotes, chronicle the work of Harvard professors, military planners and scientists as they plan and test this use of the electromagnetic technology. For example, one of the papers describing this use was from the International Red Cross in Geneva. It even gave the frequency ranges where these effects could occur the same ranges which HAARP is capable of broadcasting.

The following statement was made more than 25 years ago in a book which Brzezinski wrote while a professor at Columbia University: "Political strategists are tempted to exploit research on the brain and human behavior. Geophysicist Gordon J. F. MacDonald specialist in problems of warfare says accurately timed, artificially excited electronic strokes 'could lead to a pattern of oscillations that produce relatively high power levels over certain regions of the Earth. . . . In this way, one could develop a system that would seriously impair the brain performance of very large populations in selected regions over an extended period. . . .' No matter how deeply disturbing the thought of using the environment to manipulate behavior for national advantages, to some the technology permitting such use will very probably develop within the next few decades."

In 1966, MacDonald was a member of the President's Science Advisory Committee and later a member of the President's Council on Environmental Quality. He published papers on the use of environmental-control technologies for military purposes. The most profound comment he made as a geophysicist was: "The key to geophysical warfare is the identification of environmental instabilities to which the addition of a small amount of energy would release vastly greater amounts of energy."

While yesterday's geophysicists predicted today's advances, are HAARP program managers delivering on the vision? The geophysicists recognized that adding energy to the environmental soup could have large effects. However, humankind has already added substantial amounts of electromagnetic energy into our environment without understanding what might constitute critical mass. The book

by Begich and Manning
raises questions. Have these additions been without effect,
or is there a cumulative amount beyond which irreparable
damage can be done? Is
HAARP another step in a journey from which we cannot turn
back? Are we about to embark on another energy experiment
which unleashes
another set of demons from Pandora's box?

As early as 1970, Zbigniew Brzezinski predicted a "more
controlled and directed society" would gradually appear,
linked to technology. This
society would be dominated by an elite group which impresses
voters by allegedly superior scientific know-how. Angels
Don't Play This HAARP
further quotes Brzezinski:

"Unhindered by the restraints of traditional liberal values,
this elite would not hesitate to achieve its political ends
by using the latest modern
techniques for influencing public behavior and keeping
society under close surveillance and control. Technical and
scientific momentum would
then feed on the situation it exploits."

His forecasts proved accurate. Today, a number of new tools
for the "elite" are emerging, and the temptation to use them
increases steadily.
The policies to permit the tools to be used are already in
place. How could the United States be changed, bit by bit,
into the predicted, highly
controlled technosociety? Among the "stepping stones"
Brzezinski expected were persisting social crises and use of
the mass media to gain
the public's confidence.

In another document prepared by the government, the U.S. Air
Force claims: "The potential applications of artificial
electromagnetic fields are
wide-ranging and can be used in many military or quasi
military situations. . . . Some of these potential uses
include dealing with terrorist groups,
crowd control, controlling breaches of security at military
installations, and antipersonnel techniques in tactical
warfare. In all of these cases the
EM (electromagnetic) systems would be used to produce mild
to severe physiological disruption or perceptual distortion
or disorientation. In
addition, the ability of individuals to function could be
degraded to such a point that they would be
combat-ineffective. Another advantage of

electromagnetic systems is that they can provide coverage over large areas with a single system. They are silent, and countermeasures to them
may be difficult to develop. . . . One last area where electromagnetic radiation may prove of some value is in enhancing abilities of individuals for
anomalous phenomena."

Do these comments point to uses already somewhat developed? The author of the government report refers to an earlier Air Force document
about the uses of radio-frequency radiation in combat situations. (Here Begich and Manning note that HAARP is the most versatile and the
largest radio-frequency transmitter in the world.)

The United States Congressional Record deals with the use of HAARP for penetrating the Earth with signals bounced off the ionosphere. These
signals are used to look inside the planet to a depth of many kilometers in order to locate underground munitions, minerals and tunnels. For
1996, the U.S. Senate has set aside $15 million to develop this ability alone: Earth-penetration tomography.

The problem is that the frequency needed for
Earth-penetrating radiations is within the frequency range most cited for disruption of human
mental functions. It may also have profound effects on migration patterns of fish and wild animals which rely on an undisturbed energy field to find
their routes.

As if electromagnetic pulses in the sky and mental disruption were not enough, Eastlund bragged that the superpowerful ionospheric heater
could control weather.

Begich and Manning brought to light government documents indicating that the military has weather-control technology. When HAARP is
eventually built to its full-power level, it could create weather effects over entire hemispheres. If one government experiments with the world's
weather patterns, what is done in one place will impact everyone else on the planet. Angels Don't Play This HAARP explains a principle behind
some of Nikola Tesla's inventions resonance which affects planetary systems.

Bubble of Electric Particles

Angels Don't Play This HAARP includes interviews with independent scientists such as Elizabeth Rauscher. She has a Ph.D., a long and impressive career in high-energy physics, and has been published in prestigious science journals and books. Rauscher commented on HAARP: "You're pumping tremendous energy into an extremely delicate molecular configuration that comprises these multilayers we call the ionosphere."

The ionosphere is prone to catalytic reactions, she explained: if a small part is changed, a major change in the ionosphere can happen. In describing the ionosphere as a delicately balanced system, Dr. Rauscher shared her mental picture of it: a soap-bubblelike sphere surrounding the Earth's atmosphere, with movements swirling over the surface of the bubble. If a big enough hole is punched through it, she predicts it could pop.

Slicing the Ionosphere

Physicist Daniel Winter, Ph.D., of Waynesville, North Carolina, says HAARP high-frequency emissions can couple with the long-wave (low-frequency, or ELF) pulses the Earth grid uses to distribute information as vibrations to synchronize dances of life in the biosphere. Dan terms this geomagnetic action "Earth's information bloodstream" and says it is likely that coupling of HAARP hf (high-frequency) with natural ELF (extremely low-frequency) can cause unplanned, unsuspected side effects.

David Yarrow of Albany, New York, is a researcher with a background in electronics. He described possible interactions of HAARP radiations with the ionosphere and Earth's magnetic grid: "HAARP will not burn 'holes' in the ionosphere. That is a dangerous understatement of what HAARP's giant gigawatt beam will do. Earth is spinning relative to thin electric shells of the multilayer membrane of ionospheres that absorb and shield Earth's surface from intense solar radiation, including charged-particle storms in solar winds erupting from the Sun. Earth's axial spin means that HAARP in a burst lasting more than a few minutes will slice through the ionosphere like a microwave knife. This produces not a hole, but a long tear an incision."

Crudely Plucking the Strings

"Second concept: As Earth rotates, HAARP will slice across geomagnetic flux . . . a donut-shaped spool of magnetic strings like longitude
meridians [on maps]. HAARP may not 'cut' these strings in Gaia's magnetic mantle, but will pulse each thread with harsh, out-of-harmony high
frequencies. These noisy impulses will vibrate geomagnetic flux lines, sending vibrations all through the geomagnetic web.

"The image comes to mind of a spider on its web. An insect lands, and the web's vibrations alert the spider to possible prey. HAARP will be a
man-made microwave finger poking at the web, sending out confusing signals, if not tearing holes in the threads.

"Effects of this interference with symphonies of Gaia's geomagnetic harp are unknown and, I suspect, barely thought of. Even if thought of, the
intent [of HAARP] is to learn to exploit any effects, not to play in tune to global symphonies."

Feverish Earth

Among other researchers quoted is Paul Schaefer of Kansas City. His degree is in electrical engineering and he spent four years building
nuclear weapons. He says, "But most of the theories that we have been taught by scientists to believe in seem to be falling apart."

Schaefer talks about imbalances already caused by the industrial and atomic age, especially by radiation of large numbers of tiny, high-velocity
particles "like very small spinning tops" into our environment. The unnatural level of motion of highly energetic particles in the atmosphere and in
radiation belts surrounding Earth is the villain in weather disruptions, according to this model which describes an Earth discharging its buildup of
heat, relieving stress and regaining a balanced condition through earthquakes and volcanic action: "One might compare the abnormal energetic
state of the Earth and its atmosphere to a car battery which has become overcharged with the normal flow of energy jammed up, resulting in hot
spots, electrical arcing, physical cracks and general turbulence as the pent-up energy tries to find someplace to go."

In a second analogy, Schaefer says: "Unless we desire the death of our planet, we must end the production of unstable particles which are generating the Earth's fever. A first priority to prevent this disaster would be to shut down all nuclear power plants and end the testing of atomic weapons, electronic warfare and 'Star Wars.'"

Meanwhile, the military builds its biggest ionospheric heater yet, deliberately to create more instabilities in a huge plasma layer – the ionosphere – and to rev up the energy level of charged particles.

Electronic Rain from the Sky

The military has published papers about electron precipitation from the magnetosphere (the outer belts of charged particles which stream toward Earth's magnetic poles) caused by manmade very-low-frequency electromagnetic waves: "These precipitated particles can produce secondary ionization, emit x rays, and cause significant perturbation in the lower ionosphere.

Two Stanford University radio scientists offer evidence of what technology can do to affect the sky by making waves on Earth. They showed that very-low-frequency radio waves can vibrate the magnetosphere and cause high-energy particles to cascade into the Earth's atmosphere. By turning the signal on or off, they could stop the flow of energetic particles.

Weather Control

Avalanches of energy dislodged by such radio waves could hit us hard. [The Stanford researchers'] work suggests that technicians could control global weather by sending relatively small "signals" into the Van Allen belt (radiation belts around Earth). Thus Tesla's resonance effects can control enormous energies by tiny triggering signals.

The Begich/Manning book asks whether that knowledge will be used by war-oriented or biosphere-oriented scientists.

The military has had about 20 years to work on weather warfare methods, which it euphemistically calls weather modification. For example, rainmaking technology was taken for a few test rides in Vietnam. The U.S. Department of Defense sampled lightning and hurricane manipulation studies in Project Skyfire and Project Stormfury. And they

looked at some complicated technologies that would give big effects. Angels Don't
Play This HAARP cites an expert who says the military studied both lasers and chemicals which they figured could damage the ozone layer over
an enemy.

Looking at ways to cause earthquakes, as well as to detect them, was part of the project named Prime Argus, decades ago. The money for that
came from the Defense Advanced Research Projects Agency (DARPA, now under the acronym ARPA).

In 1994 the U.S. Air Force revealed its Spacecast 2020 master plan, which includes weather control. Scientists have experimented with weather
control since the 1940s, but Spacecast 2020 noted that "using environmental modification techniques to destroy, damage or injure another state
[is] prohibited." Having said that, the Air Force claimed that technological advance "compels a reexamination of this sensitive and potentially
risky topic."

Forty Years of Zapping the Sky?

As far back as 1958, the chief White House adviser on weather modification, Captain Howard T. Orville, said the U.S. Department of Defense
was studying "ways to manipulate the charges of the Earth and sky and so affect the weather" by using an electronic beam to ionize or deionize
the atmosphere over a given area.

In 1966, Professor Gordon J.F. MacDonald was Associate Director of the Institute of Geophysics and Planetary Physics at the University of
California, Los Angeles, was a member of the President's Science Advisory Committee, and later a member of the President's Council on
Environmental Quality. He published papers on the use of environmental-control technologies for military purposes. MacDonald made a
revealing comment: "The key to geophysical warfare is the identification of environmental instabilities to which the addition of a small amount of
energy would release vastly greater amounts of energy."

World-recognized scientist MacDonald had a number of ideas for using the environment as a weapon system and he contributed to what was, at
the time, the dream of a futurist. When he wrote his chapter

"How to Wreck the Environment" for the book Unless Peace Comes, he was not
kidding around. In it he describes the use of weather manipulation, climate modification, polar ice-cap melting or destabilization,
ozone-depletion techniques, earthquake engineering,
ocean-wave control and brainwave manipulation using the planet's energy fields. He also
said that these types of weapons would be developed and, when used, would be virtually undetectable by their victims. Is HAARP that weapon?
The military's intention to do environmental engineering is well-documented.

U.S. Congress subcommittee hearings on Oceans and International Environment looked into military weather and climate modification
conducted in the early 1970s. "What emerged was an awesome picture of far-ranging research and experimentation by the Department of
Defense into ways environmental tampering could be used as a weapon," said another author cited in Angels Don't Play This HAARP.

The revealed secrets surprised legislators. Would an inquiry into the state of the art of electromagnetic manipulation surprise lawmakers today?
They may find out that technologies developed out of the HAARP experiments in Alaska could deliver on Gordon MacDonald's vision, because
leading-edge scientists are describing global weather as not only air pressure and thermal systems but also as an electrical system.

Small Input, Big Effect

HAARP zaps the ionosphere where it is relatively unstable. A point to remember is that the ionosphere is an active electrical shield protecting
the planet from the constant bombardment of high-energy particles from space. This conducting plasma, along with Earth's magnetic field, traps
the electrical plasma of space and holds it back from going directly to the Earth's surface, says Charles Yost of Dynamic Systems, Leicester,
North Carolina. "If the ionosphere is greatly disturbed, the atmosphere below is subsequently disturbed."

Another scientist interviewed said there is a superpowerful electrical connection between the ionosphere and the part of the atmosphere where
our weather comes on stage: the lower atmosphere.

One manmade electrical effect power-line harmonic resonance causes fallout of charged particles from the Van Allen (radiation) belts, and the falling ions cause ice crystals which precipitate rain clouds.

What about HAARP? Energy blasted upward from an ionospheric heater is not much compared to the total in the ionosphere, but HAARP documents admit that thousandfold greater amounts of energy can be released in the ionosphere than injected. As with MacDonald's "key to geophysical warfare," "nonlinear" effects (described in the literature about the ionospheric heater) mean small input and large output.

Astrophysicist Adam Trombly told Manning that an acupuncture model is one way to look at the possible effect of multigigawatt pulsing of the ionosphere. If HAARP hits certain points, those parts of the ionosphere could react in surprising ways.

Smaller ionospheric heaters such as the one at Arecibo are underneath relatively placid regions of the ionosphere compared to the dynamic movements nearer Earth's magnetic poles. That adds another uncertainty to HAARP: the unpredictable and lively upper atmosphere near the North Pole.

HAARP experimenters do not impress common sense Alaskans such as Barbara Zickuhr, who says, "They're like boys playing with a sharp stick, finding a sleeping bear and poking it in the butt to see what's going to happen."

Could They Short-Circuit the Earth?

Earth as a spherical electrical system is a fairly well-accepted model. However, those experimenters who want to make unnatural power connections between parts of this system might not be thinking of possible consequences. Electrical motors and generators can be caused to wobble when their circuits are affected. Could human activities cause a significant change in a planet's electrical circuit or electrical field? A paper in the respected journal Science deals with man-made ionization from radioactive materials, but perhaps it could also be studied with HAARP-type skybusters in mind: "For example, while changes in the Earth's electric field resulting from a solar flare modulating conductivity may

have only a barely detectable effect on meteorology, the situation may be different in regard to electric field changes caused by man-made
ionization."

Meteorology, of course, is the study of the atmosphere and weather. Ionization is what happens when a higher level of power is zapped into

technologies, says, "One look at the weather should tell us that we are on the wrong path."

What class license covers these freqs?

Andy,

I have been working with KaWin for awhile now.
I was part of the beta test team.

It is my opinion that the 79 dollars is well worth it.
I use KaWin with the following TNCs, KAM+ Rev 8, 9612 and KPC-3.

I find that this package fits my needs from probing the latest
bulletins on the local BBS at 9600 baud to QSO chats on PACTOR
and RTTY.

One nice feature is that if you have the com ports, you can
have all your KAM TNCs running at the same time with a common
single point of control.

In working with Stan, over the many months of development,
he has put a lot of work into this package and I have found
him to be very responsive to input. He has put the effort
into his package.

If you are looking for a full features KAM TNC control program
for a PC platform with a modern graphical interface KaWin is
worth the bucks.

Please note, KaWin is not for older systems or the DOS or die
users. I have tested the package on the following platforms.

386SX 4MBs MS-Win 3.11 OK but slow
486SX33 8MBs MS-Win 3.11 Works OK
486DX266 8MBs MS-Win 3.11 Works fine
486DX266 8MBs Win-95 Works fine
P100 8MBs Win-95 Works fine
P90 32MBs W-NT 3.51 & 4.0 Works fine
P130 24MBs W-NT Win-95 Works fine

In writing this, I realized this is starting to sound
like a magazine review. It is not, I paid the the fees myself.

My 2 cents worth,
73 de Dennis Mobley KT4FI

Nuts ... don't have that particular manual for my old KAM.
Can some kind soul let me know what is necessary to do a
"hard reset" ....

My old KAM (upgraded to 5.0x) is really acting screwly lately.
Awhile back I installed the DCD State Machine mod from TAPR
and that was fine ... but recently, I can't get any of my s/w
to talk to the KAM ... as I recall, there's a jumper (K6)
that you're supposed to move from NORM to ??? or ???? and
are you supposed to apply power before reverting?

Help ....

Thanks

Hi All

I am looking for recamindations/leeds on a modem for TCP/IP packet both 1200 and 9600. One common solution is to use a TNC in KISS mode, but I am looking for just the Modem portion. If I will be bypassing the TNC portion anyway why pay for it.

Additionaly does anyone know or have pointers to the modem standard/spec for 9600 and what portion of the formating/control the modem does in KISS mode while operating TCP/IP packet.

Please respond to the news group and/or e-mail, I regulary read both. Thanks for your time and help.

You might try using a MAC prg by getting the Shareware MAC emulator called
Shapeshifter. It's available via ftp @ ftp.netnet.net Shapeshifter needs a
68020 or better I believe. Good luck.

Ever hear of a VOM? While it is *convienent* to be able to read
color codes, it is not necessary in order to do construction. In
fact, with some of the far east resistors you'll often be reaching
for the VOM to figure out what value that fucia-puce-chartreuse
resistor *really* is anyway.

But assuming you just don't *want* to build anything, there are
a number of programs on oak.oakland.edu that make use of the
Soundblaster card in your PC to decode Morse or RTTY.

For UHF, the TEKK KS-900 will support 19.2 kb direct FSK (or 9600 baud with an audio modem attached). It costs about $130 and runs 2 watts. The Kantronics D4-10 is a 10 watt UHF radio that will also support direct 19.2 kb FSK (or 9600 baud with an audio modem). It unfortunately costs a bit over $300. Someone in Europe has kits that support 38.4 kb direct FSK. I don't recall who or how much. And of course the GRAPES RF modem kit costs $250 (plus a transverter), and gives you 56 kb MSK.

But if you just need something to work inside the lab, the Motorola MC2833 transmitter on a chip will do at least 19.2 kb FSK and only costs a bit over a dollar. Motorola has a companion receiver on a chip, the MC13135, which will receive the signal, and costs around $2. Just use a simple comparator chip as a slicer on its output to recover the data.

Having to do this occasionally is a vast pain in the kazoo, especially
as it entails taking the bloody thing apart to get to the jumper.

I wired up a magnetic reed switch to the J6 pins, and hot-glued the reed
to the rear of the front panel.

This way, I can hold a small magnet up to the front panel and power up to
reset the pig- without having to disassemble the thing. Far more convenient.

(now if I didn't have to reset it occasionally, that would be even better!)

> The manual speaks of replacing a "backlight" but I'm not sure if this
> will solve the problem (lights either work or they don't right?) Any
> info on this old beast would be greatly appreciated.

Actually, Bill, you may have either of two completely different problems.

The backlight could be getting weaker, if the connections are corroded
or the driver is getting weak. Additionally, some types of flourescing
lights get weaker as they age. However, the backlight is not necessary
most of the time, so you should be able to find an angle and lighting
condition that allows you to see the display clearly even with no
backlight at all.

If you can't, then the problem may be in the connections to the display.
High resistance connections can cause the display to appear weak under
all lighting conditions, even with a good backlight.

regards,
Joe Foor KF4DYS

2227. Another KAM query - re Version 6

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-01 00:00:00 UTC
From: slay@netcom.com
Message-ID: <slayDqr3nx.92I@netcom.com>
Source record: 37317

I have an old KAM which has been upgraded to Version 5.0 AND also has
the TAPR DCD state machine modfication for open squelch operation.

The questions are:
1) Is version 6.0 enough to give me Pactor capability?
(I don't really care about G-Tor, etc)

2) Is version 6.0 a simple firmware (Eprom) upgrade, or does it
REQUIRE the enhancement board from Kantronics ... again, I
don't really care about G-Tor nor about expanding the mailbox
RAM size.

Thanks and 73,
Sandy WA6BXH

2229. Drivers for PI2-cards ?!?!

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-01 00:00:00 UTC
From: fredrik.elversson@mailbox.swipnet.se
Message-ID: <4m7lrg$6jp@mn5.swip.net>
Source record: 37319

Hi,

My name is Fred and my callsign SM7UGE. I am in deperate need of some drivers for the PI2-cards. I know that NOS-programs, such as KA9Q and JNOS will support the card, but it would be really great if there was another driver; like "stand-alone", i.e I don't need NOS-programs to run the card. I would like to run the FBB-BBS software, without need for a NOS-program.

I have heard that there is one that can simulate an ethernet networkcard, but where to find it ?! And can the BPQ-node soft support this driver, I think BPQ do support ethernet, but does it support this "ethernet-driver" for PI2-cards?

The point here is to work higher speeds, and perhaps run the usual internet applications such as Netscape, WS-FTP, and so on, and make a internet-like network on packetradio. (NO such thing as making a gateway!)

ANY help, small or big, are very appreciated! Please make a copy as e-mail on all answers, since I am not a regular reader of this newsgroup.

Hi, one of our local amateurs here in Mt Gambier, has a KAM+ tnc - he & I have scoured the Internet looking for programmes which will do wefax with the tnc. I found 2 wefax progs which were for KAM tncs but neither of them will resolve the signals properly.
I did access the KANTRONICS WWW SITE & attempted to send emails to the various email addresses given on their www page but in every case I got the " the address is invalid" type messages from the mail server. Can any one give me a functioning email address for the makers of KAM+ tnc &/or advise of any sites which have suitable wefax software.

[snip]

Well, you've posed some very interesting questions about this. You've also managed to outline most of the negative aspects, without outlining a single positive one. Let me make two points. First, the ozone layer is degenerating at an alarming rate. Because of this, we need to find a way to patch these growing holes in the ozone layer. It's my rough guestimation that Haarp is being tested for this purpose. The problem is this. When new technology is discovered, it's often in very raw form, and needs to be honed, researched, and checked out time and time again before it's deemed to be safe and reliable. Compare the spark gap transmitter, with today's newer and more reliable radios. Get the comparison? Maybe haarp in it's roughest form could be considered to be harmful, but once the technology is perfected, I'm sure that the uses for it will be many.

Another point I want to bring up is weak signal technology. In other words, using a very faint signal in close proximity, to drown out a much stronger signal further away. Or a more widespread one. In essence, and electronic fence to contain errant signals from reaching the everyday joe, such as the ones outlined by the Geneva Red Cross. I won't say that you're in error for considering the negative, but that's all you've considered, and haven't even come up with one valid point for why someone might be researching this. Do you think these men are idiots ? Unbelievably paranoid to assume that noone has considered the negative aspects of the projects. Or engineered solutions to the aforementioned problems. I'm sorry if I sound a bit callous, but I think you've been watching too much of the X-files, and not spent enough time doing research. Take care.

Hi all,
I am trying to have two modems talking to each other. Just then,
I have them talking with converse and transparent mode, but it didn't
working for KISS mode. In fact, they lost connection when I put them
into KISS mode.
I realise that I will no longer have AX.25 in KISS, but
I didn't expect they would lost connection !
Can anyone help ? Are there special instructions required ?

Your help will be very much appreciated. Thankyou.

Larry,

Thanks for the reply and the offer. I downloaded HamCom and tried it last night with a demodulator a co-worker built for me. Didn't work. He didn't have the correct op-amp and used a substitute and I think that may be the problem. We're going to try again with the right op-amp and see what happens. I'll keep your note and maybe get back to you if we continue to have problems. Thanks again,

I know nothing at all about amateur radio, but am interested in the ACARS system used by aircraft to relay data...I have a small scanner unit which I use to listen in on airband frequencies...Is there any software available enabling me to Analogue to Digital convert these data signals using the ADAC on my SoundBlaster card...It's a 16bit resolution ADAC...Is this feasible or am I barking up the wrong tree and it's nothing to do with analogue to digital conversion...? I know there's a ZX Spectrum emulator for the PC which allows you to load spectrum games from cassette using the ADAC on a SoundBlaster and it doesn't even have to be 16bit...

Thanks...

From: rhebel@bmi.net
Message-ID: <NEWTNews.831052143.17970.rhebel@pixur.bmi.net>
Source record: 37327

I am trying to set up jnos110m. Computer is a 386 with 8megabytes of RAM (configurable as extended or expanded) and a 387 processor (not that it matters). Version 6.2 DOS. I am using a KAM-Plus TNC. 2 meter.

Does anyone know where I can locate an autoexec.nos file for this configuration? Does anyone have experience with this set-up they can share?

I can also use a 486 if necessary, but I don't see the need for that muscle for the service here in Walla Walla, WA. And I'd like to keep costs down (I have a '386 on-hand...).

Any help would be appreciated.

2238. Help: Weak LCD Display

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-02 00:00:00 UTC
From: Bill Meara <w.meara@codetel.net.do>
Message-ID: <4mal0q$ah0@server2.codetel.net.do>
Source record: 37328

I have an old Tandy 1400 LT laptop. The LCD display has gone weak. The manual indicates that it might be a weak backlight. The book also hints that humidity and heat might weaken the display. This computer has been in heat and humidity (in the Dominican Republic)! I'm trying to figure out if the damage was to the backlight tube or to the liquid crystals in the display itself. Anybody have any experience with this kind of thing? Any ideas would be much appreciated.

TIA 73 Bill N2CQR/HI8

In KISS mode, the connection is established and maintained by the
software you use, not the TNC firmware.

F_iota - [France] F5CCO (Eric) ,F6JSZ (Mark) and F1IXO (J.Michel) are
plannig a DXpedition to Planier Isl. (IOTA EU-095) for the 1996
IOTA Contest.This Island also has the Ref : ME-004.They will be
QRV on SSB (F5CCO) , CW (F6JSZ) and Satellite (F1IXO).QSL are
ok via the Bureau or direct to home-address :
F6JSZ: Mark A. Kentell P.O BOX 76 19002 TULLE CEDEX
F1IXQ: J-Michel Gueugnot - 208 rue de l'oradou 63000 Clermont
Ferrand
F5CCO: Eric Fayolle P.O BOX 29 43300 Langeac.
All in France , ... hi :-) email for info: f5cco@es-conseil.fr
J6 - [St.Lucia] Eric (F5CCO) is going on his honeymoon to this country
from 27 June to 4 July.He's taking care of the license.
JW - [Svalbard] Rag (OZ8RO) is going again to Svalbard from May 1-5th.
He will focus on the new bands.Call to be used : JW5HE.
TI9 - [Cocos Isl.] Until May 5th. two stations will be active from this
Isl. One in HF (TI9X) and other on Satellite (TE9RLI).
The operators are : JH1NBN, TI5RLI, TI5KD, JI3ERV and 7L2RPY .
QSL via JH1NBN (Callbook Address).
VK9C - [Cocos-Keeling Isl] From May 18 to 31 , VK4FW (ex-VK4CRR), VK2IVK
, VK4DHM, and possibly more ops.They will work on all bands ,
mainly in SSB , some CW is expected.The call is not known yet !
Flight, excess baggage, and accomodation have been paid. The

equipment has been checked and is ready. The team are looking
forward to making contact with as many stations as possible as
well as make special effort work stations as far away as possible.
QSL via VK4FW. (See address below)
ZD8 - [Ascension Isl.] Des (G0DEZ) will go to this Isl. from late May
until the end of 1996.He will sign ZD8DEZ.Activity will be
concentrated on HF and 50 MHz, mostly CW, but also with a little
RTTY and SSB.Operations as QRP are also expected.He plans to be
active on all major contest until the end of 1996.
All QSLs should be via bureau to G0DEZ or to his direct address:
Des Watson (G0DEZ), 12 Chadswell Heights, Lichfield Staffordshire
WS13 6BH, England. DO NOT SEND CARDS TO ASCENSION ISL. !!
ZL8 - [Kermadec Isl.] From May 4 to May 14 , ZL8RI . QRV Freqs will be:
CW -> 5 or 20 khz above the bottom of the band.
SSB -> 1830 3775 7065 14195 18120 21295 24940 28395/28495
RTTY-> 14080 21080 (if condx are bad : 7040 khz)

=== * VHF & UP * ===

TI9 - [Cocos Isl.] TE9RLI is QRV until May 5th on AO-13 and AO-10.

Yeah chris, these modems are Bell 202 compatible. I use things like that at work for telemetry over radio applications. It's simple and it works. That's the best I can say about it. What you will need is a standard phone patch unit or a "line in" and "line out" jack on your radio to interface the bugger. If you use it on FM, I reccomend you run it with squelch wide open. Send me e-mail if you want further details.

2242. KAM problems

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-02 00:00:00 UTC
From: roslewskirb96.cs26@usafa.af.mil
Message-ID: <4mb5fm$9ca@usafa2.usafa.af.mil>
Source record: 37332

Hello,
Recently we have been having problems with the club's KAM. For some
reason, every so often it will "lock up" (for lack of a better term). When
this happens, all of the lights on the front panel will light up except the
receive light, which seems to work normally. The TNC will not accept any
commands from the terminal, nor can anyone else connect to it. It has done
this twice over the last month, and I think it's only a matter of time before
it happens again. It is an older KAM, with version 5.0 (I'm pretty sure)
firmware. Any suggestions?

Thanks,
Russ KI7FL

ETHRAX25 does work. How did you have it installed? What OS? What
TCP stack? Is your Internet Service Provider using dynamic address
assignment or do you have fixed addresses?

> I realise that I will no longer have AX.25 in KISS, but
>I didn't expect they would lost connection !
> Can anyone help ? Are there special instructions required ?

KISS does not support AX.25. It is simply a channel management and
modem management protocol. When you put the TNC in KISS mode, you
have to do the layer 2 protocol (AX.25 link layer, slip, ppp, etc)
via software running on the host computer.

In other words, it is the AX.25 layer that supported the connected
mode link. When you go into KISS, you are no longer doing AX.25 in
the TNC so the link is lost.

>a ground loop to me?

Ask yourself this, Mike, is the shield of a coax connected at each end?
Does that mean every coax you use causes a ground loop?

The correct answer is maybe, or maybe not. It depends on the other wiring
in the system whether a ground loop is created or not. As my old grandpappy
used to say, "It takes two wires to make a light." If the two pieces of
equipment are connected to separate grounds, adding the shielded cable
between them may create a ground loop. But if they are both grounded to
a single point (as they should be) then the shield will not create a
ground loop.

2248. xtal for Tekk trx

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-02 00:00:00 UTC
From: rlogghe@unicall.be
Message-ID: <318919b6.0@news-feed.tfi.be>
Source record: 37338

Hello,

Thanks for reading this message.

I'm looking for the specifications of the crystals that are used in
the Tekk KS-1000 trx.

The local crystal manufacturer asks if the xtals are used at the
serial or at the parallel resonance, and the value of the capacitor.
At the moment I can't give them an answer, because I don't have the
schematics of the trx.

If someone could help me, I would be very grateful, so I can order
them (and order them right ;^))

2250. How to tell a node's input frequency?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-02 00:00:00 UTC
From: rma@mtgzcs5.mt.att.com
Message-ID: <4mavcj$1r3@nntpa.cb.att.com>
Source record: 37340

On 2M packet, when I connect to a NetROM or TheNet node and give the "nodes" command, I usually see a multiline display of all nodes that can be accessed.

Some of the nodes listed will be far away, and therefore will be accessable only by going through the node I connected to, by issuing another "connect." But I bet that I could hit directly at least some of the nodes listed, if I only knew their input frequency.

Some nodes give their input frequency in response to the "info" command, and others do not.

So, is there a command that would cause the node I'm connected to to display the input frequencies of its neighbor nodes AS WELL AS their names? (Sort of an expanded nodes display). And if not, is there a command other than "info" to cause a node to display its own input frequency?

Thanks and 73s!

Rich

Rich,
I'm a node sysop, and there is no way to see the input freq on a node list. I'm using X1Jr4, and am well familiar with TheNet Plus. All you can do is find out how to get with the sysop, and ask him. I put my user port freq in the info text area as well as my name and phone number. It would be good if all sysops did the same, but they don't!

73, Kenny.

Sandy,

Here are some exerpts from my KAM manual, hope it helps.

Hugh Pearson

Place K6 in "test" (T) position.
Apply power to the TNC.
Observe terminal display at 300 Baud.
After initialization messages, turn power off.
Return jumper to normal position.

You might try removing and re-installing the socketed ICs (EPROM &
memory, if I recall). Sometimes, as they age, the connections in the
socket get flaky & weird things happen. Also, check to make sure the
proper 5 volts is present at the output of the regulator. I've heard
that the pair of electrolytic caps near the regulator sometimes go bad,
also. They're easy to replace and couldn't hurt things.

Try the BPQ to diode matrix interface made by Amateur Network Supply.
It's about $7 and goes into the serial port on the pc. A regular 9 pin
serial cable is used to connect to the matrix. Got one here and really
like it. Their address is PO box 219, Montvale, NJ. 07645

I'm looking for commercial off the shelf products that can be attached to HF/VHF radios to turn them into network nodes on a standalone RF data network. Any suggestions/comments would be greatly appreciated. The protocol used by the attachments is not critial, although I would prefer a standard one. Crypto support would be nice.

I use my TNC with my Amiga by using Terminate. It is a terminal/modem
program but it works fine for "basic" operation.

2260. KaWin 6.38 released on the web

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-03 00:00:00 UTC
From: stan@mutadv.com
Message-ID: <4md4ko$c1o@news-2.csn.net>
Source record: 37253
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.equipment

KAWIN NEWS

KaWin 6.38 is ready for download from the KaWin Home Page!

New files are:
KAWIN638.EXE the full KaWin system for new users,
KAWUP638.EXE just the updated KAWIN.EXE and squawk file,
KAWINHLP.EXE the latest KAWIN.HLP, help file.

The new features in version 6.38 are logging and Yapp!

The new logging feature is a modest start at a very big subject. A simple text file, in comma-delimited format for easy import into other programs, stores a wealth of info on your QSOs. See the new help file for details.

With the addition of a very full implementation of the Yapp file transfer protocol and a significant enhancement of the existing KaWin HF protocol, KaWin becomes the undisputed leader in file transfer technology for RF datacomm. The following table summarizes the features of the three protocols that KaWin now supports:

Feature	KaWin/HF	Yapp	Gold
Applicable modes	G-tor/Pactor	Packet	Packet
Full binary transparency	yes	yes	yes
Robust error detection	yes	yes	yes
Auto-start remote upload/download	yes	yes	yes
Auto-start remote directory request	yes	no	yes
Multiple file selection on Send File	yes	yes	no
Wildcards on Get File	yes	yes	no
Restartable after a broken transfer	yes	yes	yes
Verifies original file on restarts	yes	yes	no
Keyboard chat during transfer	no	no	yes

All currently reported bugs are fixed in 6.38.

To add to the KaWin News mailing list, send email to stan@mutadv.com with the word SUBSCRIBE in the subject line, or use the handy subscription link on the KaWin Home Page. To be removed from the list, send email to stan@mutadv.com with the word UNSUBSCRIBE in the subject line and be sure to include the email address this message was sent to in the body. I cannot remove you if I don't know your address!

I had the exact same problem a few months ago and changing the two
electrolytic capacitors mentioned above cured the problem. I suspect a
lot of the older Kams are going to have this problem sooner or later.

I'm looking for apples-to-apples throughput comparisons for HF digital modes, especially the more advanced modes (e.g., Pactor-I&II, G-TOR, CLOVER-II, etc.). Data using an HF channel simulator would be great, i.e., along the lines of Young, et al, (1994), 13th ARRL Digital Communications Conference, p. 153, but with G-TOR and Pactor-II included. Experimental data is fine, too, if reasonably "apples-to-apples" comparisons.

Yeah, especially if the wire is an appreciable fraction of a wavelength.
The purpose of a shield is to keep signals that belong inside inside,
and signals that belong outside outside, but the shield itself is a
wire, and it can support currents too, and some of those can be
radiation coupled given the right length, orientation, etc. That's
especially true if you break one end of the shield (as you might
to eliminate hum due to the two pieces of equipment having separate
grounds). Even a closed shielded wire can be a magnetic loop, and
we all know that magnetic loops can serve as antennas (or half of a
transformer). If the wires inside the shield are twisted pairs, most
magnetic pickup can be avoided. You still have to deal with shield
currents though.

If you can keep the leads short and not gathered into neat bundles,
that helps by breaking up transformer coupling, and if you add ferrite
beads over the shield, that helps too by choking RF currents on the
outside of the shield. It is best to dress cables so that those which
might suffer from mutual coupling are oriented at right angles to each
other as much as possible, and when that's not possible, separate them
by the maximum practical distance.

G'day

I'm half way through a uni project which involves setting up TCP/ip
network over packet radio.
I have read here and there about something called k.i.s.s. and
am having difficulty finding more info about it. Could anyone
give me an indication of where I might find out more about this
protocol(?)

thanks in advance

Hi you all,

I recently bought a sw receiver with ssb named EUROCOM ATS 818 but I wonder if this is the real name or just an alias for europe business, as I've heard about a Sangean ATS 818. Anyway, the matter is that the purchaser didn't give me any information about the schematics, posibility of adding an external antena, etc. So, I would apreciate any info about this rig, specially from hams in Spain or Europe.
Thank's in advance.

The following is in spanish, sorry.

Hola a todos,

Hace unos dias he comprado un receptor de onda corta y banda lateral llamado EUROCOM ATS 818, aunque probablemente sea un clonico del Sangean ATS 818. Como con el aparato solo venia un corto manual de operacion, pero nada sobre el esquema electrico, caracteristicas tecnicas, etc., Agradeceria mucho cualquier informacion sobre el aparato en cuestion. Sobre todo, en lo que se refiere a poder incorporar filtros adicionales, antena exterior con/sin preamplificador,etc...

Muchas gracias por adelantado.

>Thanks
>Sandy WA6BXH
>slay@netcom.com

Hi Sandy

Here is what you do to perform hard reset on the Kam:

1) Set your terminal program to 300 baud (com speed between COMPUTER and TNC)
2) Locate jumper k6 It has a TEST/NORMAL position, place jumper in TEST
position3) Apply power to TNC
4) Watch Computer display for:

EEPROM INIT OK
CHECKSSUM OK
RAM OK XXXXXBYTES
REPLACE TEST JUMPER

note (some TNC's will not display REPLACE TEST JUMPER)

5) If you have removed the 2404 EEPROM from the unit for any reason the EEPROM
INIT message will read:

EEPROM INIT ERROR

This is a normal indication, not to worry!

6) Turn Power off and put Jumper back to NORMAL

7) One caution, since you will be doing the procedure with the board out of
the case and the power regulator not heat sinked to the case DO NOT leave

power applied for more than a minute or so.

Good luck, Over the years I have had to HARD RESET my KAM so many times I cut a hole in the case over the K6 jumper. Now I reach in with a pair of forceps and move the jumper. I also considered putting a momentary pushbutton on the back of the KAM!!!

>both 1200 and 9600. One common solution is to use a TNC in KISS mode,
>but I am looking for just the Modem portion. If I will be bypassing
>the TNC portion anyway why pay for it.

The TAPR 9600 baud modem works great. We use several. Visit
http://www.tapr.org/

The MFJ 9600 modem DOES NOT work well when the radio you are
interfacing to needs high levels of audio.

PacComm makes modems but I have no experience with them. Visit
http://www.paccomm.com/

> Additionaly does anyone know or have pointers to the modem
>standard/spec for 9600 and what portion of the formating/control the
>modem does in KISS mode while operating TCP/IP packet.

The modem should be interfaced to an HDLC card -- there are
several. Drivers are already available for most operating systems
for TCP over AX.25. Source is available too for any new
driver design.

>other than "info" to cause a node to display its own
>input frequency?

Probably not on your network.
Here in the Netherlands, nodes run NET.PE1CHL and they exchange
al lot of information.
When one types "NODE <nodecall>" from any node in the network,
one gets frequency, bitrate(s), city, QTH locator, responsible group,
sysop etc. for the specified node.
Quality information about the node's interlinks can be obtained as well.

I was recently given on old TNC-2 board. Its serial number is somewhere in the 3000 range. Some of the board components are broken and a few of the ICs have been pulled. I am looking for a schematic to help me get the unit back in shape. The TAPR web site has provided me with the System and Assembly manuals, even the latest firmware files, but no schematic.

Does it exist in downloadable form? If not, I'd gladly pay for copy and postage.

Thanks,

>
>73 and tnx
>

There were two versions of the tnet mini up to now. An old version and a new one. The new one was introduced about 1 year ago. Both versions work well with 9600 Baud FSK, assuming they are correctly aligned.
If you purchase a TNET mini by now it's very likely that you get the new version. You can recognize a new version by a little wire on the soldering side of the board.
The new versions can easily be modified to work with 19200 baud FSK modems by echanging the IF filters to 21M30B and (CFW455C or LF-H25S).

It depends....

If you are a purist and have the FSK FSK output of your TNC wired up to feed the FSK input of your radio, then you can use the FSK setting.

On the other hannd if you are feeding the Audio out from your TNC to the Audio in on the radio, then you can use LSB because you would actually be sending AFSK.

I use the FSK setting for my RTTY, Pactor Amtor and G-Tor. I have wired up my TNC to do either (FSK or AFSK).

I think the primary differences are...
1. FSK - there is no frequency offset.
AFSK there is
2. in FSK the frequency is supposed to shift between the Mark and Space frequencies. In AFSK of course, they are audio tones that shift.

Point is...you can use either.

2291. RFI from computer - help please

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-05 00:00:00 UTC
From: leo@jove.com
Message-ID: <4mie6j$1i5@decius.ultra.net>
Source record: 37281

I've just started to play with the digital modes. The computer is producing strong RFI to my HF XCVR. It is monitor based as switching the monitor on/off starts/stops the RFI. The frequency and harmonics vary depending upon display mode (VGA/SVGA/Windows/DOS/etc.). Typically, running Win95 @ 800x600 the harmonic period is about ("about" as it's broad-banded) 46KHz. If it matters the monitor is a Sony Trinitron 17sf running off a 486/100. I would appreciate any suggestions or shared experience. I really can't move the equipment around as it's a small space.

Tnx
Larry KC1VS

2292. FSK problems with TS-930

Newsgroup: rec.radio.amateur.digital.misc

I've posted part of this problem elsewhere but need to expand upon it. I just started playing with the digital modes and have a KAMPLus and a Kenwood TS-930. I can run AFSK through the microphone input but the FSK doesn't work. In FSK there are both receive and transmit problems. In receive the KAM loses the signal if the passband is narrowed by turning the Passband Tuning more than half-way or using the 500Hz IF filters. The consensus was that the receiver needs alignment. However, I then discovered that FSK will not XMT. The rig can be switched into XMT but there is no output. The other modes (SSB, AM, CW) are OK. Is there any correlation? Anyone have any thoughts on the matter?

Tnx

> Your help will be very much appreciated. Thankyou.

You've got a misconception as to the function of KISS mode. The purpose of KISS is to provide a way for a computer and software to be able to manage the mechanics of the connection, with the TNC providing only a minimal level of intellegence. All the TNC does is:

1) accept packets from the host computer and send them on the air, while making sure the channel is clear before keying the radio.
2) receiving all packets on the channel that don't have errors and passing all of them to the computer for it to process.

So - to use KISS mode, you have to have software running in the computer that implements the layer 2 protocol you wish to use on the air (typically AX.25). It can also implement other protocol layers above 2 by wrapping those packets in the layer 2 protocol. This is what KA9Q NOS and its variants do.

So - to summarize, a TNC in KISS mode does not exhibit any significant level of intellegence - the reason KISS is available is for those who wish to have the computer perform link management activities - i.e. do all the work...

Hope this helps.

Regards, Bob

Monitors are notorious for their lack of shielding. Toroids on the
cables may help some but that plastic case is the real problem.
Moving the monitor as far away from the xcvr will help. Try locating
the monitor so that is not on the same horizontal or vertical plane.
If the computer is in a tower or mini-tower case, place it between the
monitor and the xcvr.

>Tnx
>Larry KC1VS
==========
At my shack, most of the interference from the computer and monitor
were coming in through the antenna input to the transceiver, and
disappeared when I started using very well shielded coax (9913) as the
station feed. My 9913 coax is unbroken until it gets outside and
enters a remotely controlled antenna switching box (maybe 50 feet from
the shack).

Do this test: note the interference level you are experiencing (at a
specific frequency where it shows up). Disconnect the antenna and
shield the transceiver's coax input somehow (wrap with aluminum foil,
or use a dummy PL259 on which you have shield-covered the coax end).
Check the interference level again.

If the above shows that your antenna input cable is picking up the
interference, the answer will be to do what I did - use completely
shielded coax until you are well away from the source of the
interference. Note that this means no ladder line and matchbox.

Of course, if you are trying to use an antenna in the same room as the
rig, the problem will be more difficult to solve. My dipoles are 100 -
200 feet from the computer.

Tom, 67 and 92 Khz. are the two common with 57 khz being used for RDS at 1200 baud. One of my stations is using 9600 bps at 69 khz. Due to the wide bandwidth the sub-carrier was moved up 2 khz. to cut down on intereference to the L-R area. injection levels for sub-carriers are no more than 10 % each. Dave

William,
Check the leads to the voltage regulator where they attach to the circuit board. The regulator is screwed to the heat sink/chasis and so the leads tend to undergo a bit of flexing each time the chasis is opened.

Hi,

I would like to invite you to a new web site, dealing with the Flexnet
node system.

Flexnet has various advantages over other node systems. It exists on
two platforms (specific RMNC cards, or PC). On PC it can run with
various modems (TNCs, of course, up to 8 TNC on a single COM port, but
also Baycoms -1k2 or 9k6-, USCC cards, Soudblaster (!) cards ...)
It can also drive links over ethernet, parallel ports...

Flexnet has a dynamic routing: It chooses a route by calculating the
faster way at the time you want to connect.

PC/Flexnet can emulate a hostmode interface, so it is easy to run it
with FBB or other BBS, Clusters...

Of course, Flexnet and PC/Flexnet are made by hams. They are free.

If you want to know more about Flexnet, and get the PC/Flexnet
software:

No, it is not permissible to send a file using *any* encryption
method, although you are permitted to obscure the transmissions
necessary to operate a control link. (i.e. when controlling a
satellite.) See 97.113 and 97.207.

>2. How is secure telnet, ftp, etc., conducted on a packet LAN?

They're not. :-)

Hams have worked around this limitation by coming up with various
schemes to avoid sending complete passwords, etc. in the clear
(for example, a password prompt might ask you for the 1st, 3rd, and
9th characters in a password, but would ask for a different set of
characters the next time you logged in. Obviously, this will still
be compromised in a matter of time, unless you have a *really* long
password...) The actual files transferred, however, still need
to utilize a 'known' format that can be decoded by anybody; I.E. you
can use pkzip, but you can't use PGP.

I second the motion. HAMS have always performed valuable services
during emergencies.

One the most key elements of recovery from almost any disaster is
communications. The HAMs perform a service like that of small
independent businesses and agencies do in our market driven economy when
the big government agencies fall flat on their behinds.

----
important legal disclaimer

-you MUST be licensed by your country's telecom authority to
set up such a network.
fines and imprisonment are realistic possibilites
for skirting the law.
----
amateur radio frequencies are regulated by the ITU, and are
for amateur use only for non-commercial , non-business
purposes only
----
amateur radio digital modems, however, will work on a wide
range of frequencies, including business frequencies

This is what you want:
(all currency amts USD)
$100.00 to $1000 depending on features-
----
essentially a Packet Assembler/Dissasembler (PAD)

Connects between comm port on computer and tranciever.

Advanced Electronics Association PK-232 MBX
(AEA PK-232 MBX) is good, about $500.00
----
and numerous other mfgs and models
----
these boxes are designed for use in amateur (ham) radio
but there is nothing amateur about the performance, price

or quality - work fine on business freqs.
---
essitientially no different than commercial gear
costing thousands more, and for no good reason
other than limited buyer knowledge
---
in the ham radio world, a worldwide network moves ham digital
traffic on such equipment 24 hrs a day 7 days a week.
---
available with 1200 baud, 9600 baud 19.2 k baud and 56 k baud
modem

Does almost every protocol you can imagine
---
works with HF, VHF and UHF trancievers
---
supports FM and SSB
---
supports packet (ax.25), pactor, rtty, clover, piccalo,
baudot, amtor, TCP/IP, etc.

Full digipeater support.

Support BBS, ROSE, NOS, TNOS, and JNOS control/networking
bulliten board and routing software.

Incredible wide range of commercial and shareware
software support for any purpose possible.

Hire a licensed amateur radio operator to set it up,
or a licensed commercial radio company.
---
licensed ham operators may not accept payment for work done
regarding ham radio frequencies,and services, but of course
can use their knowledge of radio to earn money in commercial
enterprises.

Good luck,
Jim Licensed Amateur Radio Operator N2NHU in USA

Actually, it depends on your radio. If your radio

does RTTY via SSB, it will also work that way with

Pactor. However, FSK is often the better way to

go, as many rigs shift the passband such that the

filters work better on receive for Pactor/Amtor or

Rtty when in FSK mode.

Hi Larry;

You have three options.

1. build a box out of metal and enclose the computer in the shield box, filter all leads coming out if the shielded box..

2. Turn off the computer.

3. live with the noise.

Seriously you might reduce some of the interferance moving the computer and monitor around in relation to the HF rig and try wraping the cables that go to the monitor and printer around torrid cores as close as possible to the computer.
I hope this will help you. As for my system I just Live with it....

Thankyou for your reply,

What I was trying to do here is to measure the bit error rate of the
radio link.
Unfortunately, bring the TNC to KISS mode and thus removing AX.25 does
not
help because there is yet the HDLC layer embedded in the TNC. Can you
give me
some suggestions ?

What about the modem disconnect ? What is that all about ? Frankly, I am
an
absolute newbie to the radio world...

Thanks

Alex

Yes, to get true FSK with the 850, use the RTTY rca-type connector
on the back of the 850. The ACC2 connector doesn't provide FSK, although it
is great for keying and picking up audio.

2318. HTX-212 computer control?

Newsgroup: rec.radio.amateur.digital.misc

2319. RE: KAMPLUS - wefax??

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-07 00:00:00 UTC
From: J_Towle@msn.com
Message-ID: <00001fec+000014ed@msn.com>
Source record: 37209

The problem with using a TNC to decode FAX is related to the MARK/SPACE (two level) decoding of signals with inherently multiple levels or "shades of gray"

Even so-called "WEFAX Maps -- drawings" have gray scaling -- the watermark, the lighter and darker areas that result from the way the maps were drawn. The photos (satellite pictures) are clearly shaded.

Basically, using a black/white discriminator to decode drawings and photos with a lot of shades of gray just doesn't work very well -- it looks really, well, I hate to say it, but it looks awful.

This is perhaps why there are not a lot of WEFAX programs available for tncs like the PK-232 or KAM. A better approach is to use JVFAX or one of the commercial equivalents (PC-HF FAX, or AEA FAX, the latter essentially a knock off of PC-HF FAX, the first such program to use a zero crossing detector that generates a serial modem-change interrupt which is then used to measure the time difference between zero crossings, which 1/t=f produces a measure of the audio frequency being "heard".

Track down JVFAX and build the demodulator, you'll be pretty happy with the results.

So why post a binary to a non-binary group? The program is available on
several ftp sites so you only needed to post a URL instad of wasting the
money of various dial-up users, quite a few of whom probably don't even
own IBM PC compatibles.

>Larry KC1VS

This my seem a little far fetched, or even impracticle in your
situation, but what I did was buy a second computer for use with my
multimode TNC. I also own a 486/100 and it and my vga monitor cause
interference on both HF and VHF. I picked up a used 286/10 with EGA
for about $75 and dedicated it for use with the TNC. This is plenty
of speed for use with packet, rtty, amtor, etc. However, because of
the slower speed (and the better sheilding they used to use back then)
I don't get any interference from the computer, and the EGA monitor
doesn't cause me any problems. Another advantage to this is that it
allows me to keep my 486/100 free for more demanding work and
software. I can monitor the packet frequencies while doing work on
the 486. Just thought I'd throw another possibility your way.

2330. X1J Firmware - MFJ1270C MODS

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-08 00:00:00 UTC
From: ehinton@ibm.net
Message-ID: <4moo6o$4580@news-s01.ny.us.ibm.net>
Source record: 37220

HI,

I recently had some chips burned in with the x1j4 firrmware and did
the mods to my mfj1270c and - no lucks. When I turn the tnc on,
the sta and con leds light up and stay on and this is as far as I get.
I have checked and rechecked the mods according to the tnc manual
and the x1j docs. Two completly different parties have burned in
the eproms.

Does anyone have any suggestions or ideas. I tend to think it
is the tnc and no the eproms. Is there something I am missing
in doing the mods.

Any and all help on this would be greatly appreciated!!

thanks,
Butch KD3YT@KD3YT.PA.USA.NOAM.

I'm picking up a quantity of split ferrite this weekend and will first
try choking all the cables. The Sony video cable has a core built in
just next to the connector at the computer. It's about an inch long
and an inch in diameter but isn't doing much.

Actually, I do have a 286 box sitting in the corner
(its VGA not EGA but a low refresh rate) and may try it.
The downside would be giving up my KaWin software. I doubt the 286
will even run Windows 3.1 but I'll take a second look at the board
and see if I can add memory. If it will run Win 3.1
it may get the job :-)

I wish that I could just wrap the monitor in foil but there's no
way I'm gonna kill the ventilation on a $1K box. The ferrites might
help enough, too, and I understand they're reasonably massive
(came off of commercial ferrite choked cables).

Thanks to all for the postings and e-mail.

14.080 to 14.090 usually has rtty over here.

Possible causes are:
1 - listening upside down. Try listening on the other sideband.
2 - you are listening to fec mode amtor or pactor.

W1AW sends out bulletins on rtty, but I don't have the schedule in front
of me. I think they are in the evening here, so it would be the middle of
the night for you, though.

73,
Jim.

I use VLT to a TNC-2 at 19.2 Kb (yes, I've modified the TNC a bit). Works very well. Oh yes, the 68040 card in my 2000 helps the serial speed quite a bit. I also run AmigaNOS, at the same serial port speed. The higher speed makes quite a difference in system response. Other applications are no longer sluggish. I usually run AmigaNOS while I do other work.

One more thing; if the author hasn't changed the default distribution binary of AmigaNOS from optimized for space to optimized for time, recompile the source yourself. It is only 2K larger (binary is over 300K to start with) and makes a big difference in speed.

Source record: 37232

Recently I've been working on a prototype SQPSK (staggered
quadrature phase shift keyed) modem for the amateur satellite
channel. This modem is implemented totally in software running
on a PC with an ordinary (non-DSP) Soundblaster card. It runs
at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on
my web page about it, including an audio file to show what it
sounds like in noise when the signal is still copyable.

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code,
which I plan to integrate into KA9Q NOS.

Hi John,

I Have a Ven-Tel 2400 Baud external Modem. I still use it because it
is capable of generating all 16 DTMF tones for programing our repeater
through the phone line. My USR 14.4 doesn't.

Anyway...it has anexternal power supply with a flat four pin polarized
connector. The pins are numbered 4,3,2,1 left to right and the
polarization is accomplished with two notches, one on the top and the
other on the bottom surrounding pin 3. I have tried to illustrate
below:

V
4 3 2 1
^ (notches are the same size)

Pin 1 is Ground
Pin 2 is +5V @ 1 amp
Pin 3 is +12V @ 0.2 amp
Pin 4 is -12V @ 0.2 amp

I am not sure if the model you have has the same power supply but
perhaps this will help.

Hi All !

I've just acquired a Grundig Yacht Boy 400 (SW). I have absolutely no idea how this works, though.

Do you know any Indonesian Radio stations that can be reached using this little radio of mine ? If there is, what is the frequency / channel ? And how to do this on the YB 400 ?

Is it possible to receive broadcast from local (Jakarta, Indonesia) FM radio station ? I'm in Melbourne, Australia. How do I go about finding these radio stations ? Do I just search thru all the frequency ?

Please help me ! Thanks soo much ! :)

Kind Regards,

Monda

Source record: 37241

Hi,

As other persons already posted the answer to the usage of
any encryption method on packet radio is a big NO.

However, you could still use PGP with the public key/private key scheme
to validate the content of a given message thru the creation of a
cryptographical checksum of the content.

Not sure if that would help you.

Howdy, I don't know the "best" answer for this one but I can tell you what I did that worked fine... I took an old mouse that didn't work, cut the mouse off and used the 9 pin connector to go to the TNC. I bought an 8 wire quick connect plug (RS cat # 279-440) and wired the thing up as described in the HTX-212's manual. It works great (expect that I broke one of the wires and couldn't figure out why it didn't work right away. Typical for me).

Yes, and I also believe--in the laws of statistics and the criminal code. (At least if I can get caught.)

Look at http://www.usps.gov/websites/depart/inspect/chainlet.htm

Suppose one person makes $15K. Well, then they have gotten the equivalent of all of the entry fees of 3K people.

So, there must be 3K people getting $15K. So, they must have gotten the equivalent of the entry fees of 9 million people.

So, there must be 9 million people getting $15K. So, they must have gotten the equivalent of the entry fees of 27 billion people. Earth has 5.7 billion people.

In other words, this is a fucking fraud!

2357. Looking for PCTNC(?) or similar program

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-10 00:00:00 UTC
From: simonb@scowl.london.sco.com
Message-ID: <4mvr5q$5ab@hobbes.sco.COM>
Source record: 37149

I am looking for a program that will turn my old cast-off hard-diskless DOS system into a TNC for use with a Linux system. The DOS box has two serial ports and a floppy disk, and what I want to do is to connect my Baycom modem to one port, Linux to the other, and run a TNC emulation program in between them to emulate a TNC for Linux to use. Preferably a KISS, or hostmode, TNC.

I have heard from a fellow amateur about a program, called I believe, PCTNC, which apparently will do this job (or enable it in connection perhaps with an additional Baycom driver). But as yet I have been unable to track down any source of anything called PCTNC or similar. I believe PCTNC was originated by a German amateur.

Does anyone know where I can get further information on, or a copy of, PCTNC? Has anyone any experience of using it?

Thanks for any help.

Best regards,

Simon

2359. Code Speed Change: Help Needed

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-10 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <4n0hlv$1nr2@mule2.mindspring.com>
Source record: 37151

Did you know that 50 % of ALL U.S. Hams (about 340,000) are
either No Code Techs, Novices, or Tech Plus?
According to the A.R.R.L. that is true if I did my math right.

That means one half of us are now operating at 5 wpm or less code
speed.

Did you also know that there is NO international requirement for Hams
to operate above 5 wpm in the HF bands? Each country (read U.S./
F.C.C.) sets its own code speed requirements for its hams.

I asked the A.R.R.L. about this since I am a member. I was told that
the majority of U.S. hams support the current code speed requirements
for HF work below 30 mhz. [They didn't ask me.] They also told me
that this could be changed by a petition to the F.C.C. I would need
to submit a request for a rule change. If accepted it would go out
for review during a comment period.

My question is: Do we want to change the code speed so more of us
can use the HF bands?

I propose that the only code speed requirement for Hams in the
U.S. be 5 wpm. Classes of hams could still be distinguished by
different levels of written tests. But a 5 wpm code speed would allow
any class of Ham (except: Novice, Tech and Tech Plus) to operate phone
in segments of ALL the HF bands. This would essentially mean that
General, Advanced and Extra class Hams would only need to show 5 wpm
code to operate where they can now. Their written tests would stay
the same.

This would be a simple and effect way to allow ALL hams to upgrade
immediately by passing the higher level written tests. This would
preserve the historic code mode and also allow the hobby to rapidly
expand our ranks to preserve the future of HAM RADIO into the 21st
century.

Is anyone interested in helping me put together such an effort before
the F.C.C.?

I will be out of touch from May 15th until June 2nd (on vacation).

Send info if interested to: KE4IKT@sco-inc.com

2360. HAMCOMM Probs.

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-10 00:00:00 UTC
From: Piers Rochford <piers@sling.demon.co.uk>
Message-ID: <486797011wnr@sling.demon.co.uk>
Source record: 37152

I am still having problems with HAMCOMM the rtty is a jumble of letters and numbers which make no sense.

Even when decoding Morse it seems that the software is too precise and displays letters prior to the completion of them being keyed - why?

I know I have asked before but could anybody pref. in the South part of the UK send me any plain text rtty freq. with form used ie. BAUDOT / FREQ / SPEED / NORMAL OR REVERSE and TIME SENT.

Also wanted freq for weather fax charts time of day etc, and ideas for software pref. shareware for decoding such data. I have WXMAN but cannot get it to work properly.

Many Thanks.

Butch,

What size is the eprom that you burned? I think they need to be the exact same size as MFJ's original prom. I believe it should be a 256 Kb eprom. I had this same problem a little while back.

Hope this helps. Good Luck.

-- WANTED by newbie :

Any info from SWL's In Southern UK for software / freqs / interfaces
for decoding the numerous utility stions in the south.

I have HAMCOMM but its not 100% ie. It keeps missing morse transmission
and making nonsense from various RTTY stations.

ALSO WANTED>>>>>>>>>>>>

Any ideas for software for monitoring utility stations or other software
for a newbie SWL and hopeful HAM (maybe)...

IF ANYBODY IS PREPARED TO HELP ME VIA E-MAIL IN THE USE OF DATA
RECEPTION SOFTWARE SUCH AS HAMCOMM PLEASE LET ME KNOW.

MANY THANKS.

HI
I am trying to get Embaycom/Baycom to work with the hammcom interface
, I seem to have an output in transmit and my own packets are echo'd
in the Rx window but I dont receive anything off air. The interface
works fine with Pktmon on receive. I have copied all the files into
the same directory as the instuctions say. Any ideas???

Has anyone out there used the DSP 232 (AEA's new TNC.) I am curious as to anyone's impressions of the new unit.

AEA claims that the DSP 232 will be able to handle Pactor 2 "when it becomes available." (Apparently this means either when AEA licenses Pactor 2, or reverse-engineers it?) However, I have heard others say that the DSP 232, along with the DSP 2232, will NOT be able to handle Pactor 2 because its CPU is too slow to process it. Does anyone have any insight to offer regarding this?

I live near AEA and have friends that work there. I also have both a 2232 and
a DSP-232. The DSP-232 hears better than the DSP-2232 on all modes. Pactor
still has a bug or two but that are working on it.

My information is that the DSP-2232 will never have Pactor II. The DSP-232 is
Pactor II capable but I do not know if AEA will implement it.

The information you received about the DSP232 having enough horsepower
to handle Pactor II is correct -- IT CAN!!! The CPU in it is a 68340
which is a CPU32 core, the same basic core the Germans are using in their
modem.... In fact, they were consulted as the design was being put on
paper and they have agreed that the DSP232 DOES have enough CPU and DSP
capabilities to handle to Pactor 2 implementation.....

By the way, I designed the hardware for that unit...

Rick Ellis

2376. No CODE No CW on HF

I might propose a rule change that says ... "If you want to operate CW on the HF bands you must first pass a code test to update your license. HOWEVER if you do NOT intend to operate CW then you do NOT need to take or pass a code test."

There will be a PACTOR Forum at the DAYTON HamVention.
It will be at 12:45pm until 2:45pm in Forum Room #4 at
Hara Arena on Saturday, the 18th of May.

Here are more details.. Please attend if you can.

73 de Phil - KB8LUJ
Editor - PACTOR NEWS

PACTOR FORUM 1996

ATTENTION:
Those attending the 1996 Dayton Hamvention®:

[NEW]
Revised: 05-May-96
If you've read this page before, Reload will update your browser.

Web-counter says you are reader number [(Counter)] since 03-MAR-96.

PACTOR NEWS is hosting the 1996 PACTOR Forum at the Dayton Hamvention®. The forum has been scheduled for SATURDAY, MAY 18th, 1996 at Hara Arena in Forum Room #4 from 12:45pm to 02:45pm ET. Room #4 is toward the front of Hara Arena, by the SILVER ARENA (Canopy covered) entrance. Please be advised that other forums may be at the Meadowdale High School, as well as at the Arena itself.

Presently scheduled to speak are:

* Phil Sussman, KB8LUJ, Editor of PACTOR NEWS, plans to speak about PACTOR and the future of digital Ham Radio.

* Gwyn Reedy, W1BEL, President of PacComm, who will be speaking about producing their new PacComm PACTOR II unit.

* Mike Lamb, N7ML, has returned to the helm of AEA and plans to discuss current and future products.

* Ari Surkiss, 4X6UO, will speak about PACTOR in Israel.

* Dr. Tom Rink, DL2FAK, from SCS in Germany, will host a Q & A session about recent PACKET -> PACTOR protocol developments.

NOTE
* [NEW] Pete Detwiler, WA2MFY, President of Pinoak Digital, has informed us that he will be unable to speak, due to circumstances beyond his control. He expresses his regrets to those planning to attend. [NEW]

There will also be the usual open Forum question session where our speakers will be pleased to answer your questions. Please plan to attend this event. We'd love to see you there.

For more information contact: Phil Sussman - KB8LUJ @ KB8LUJ.#DAY.OH.USA.NOAM by mail at: P.O. Box 31 - Clayton, Ohio 45315 - USA or via Email to: pactor@dnaco.net

Alas, no, I will not be able to go to Dayton this year, as it conflicts with my Law School final exam schedule, worse luck. But I have friends who will be there who will hopefully be able to report back regarding matters digital.

I am an enthusiastic digital op. About 95% of my on-the-air time is on Pactor or Amtor. I have been watching the machinations of AEA and the other TNC manufacturers with some confusion. They keep releasing newer TNCs (such as the PK-900 and the DSP-2232, DSP 232) that really don't give any additional (meaningful) functionality over the PK-232. I am disinclined to part with my PK-232 for something newer until a new mode comes along that the PK-232 simply cannot support. For a little while it looked as though that might be GTOR. However, GTOR has clearly not caught on, for whatever reason.

If the DSP-232 really can support future modes such as Clover or Pactor 2, it would seem to be the way to go, since the pricing seems reasonable, and it is not burdened with a lot of features that do not interest me. (Such as the ability to do packet and pactor at the same time, like the KAM.) Hence my question about its ability to do Pactor 2.

Thanks for the info; I'll look forward to finding out more.

>
>My information is that the DSP-2232 will never have Pactor II. The DSP-232 is
>Pactor II capable but I do not know if AEA will implement it.

Thanks for the info. Hard to believe that the 232 beats the 2232. AEA makes
me nervous, pulling stunts like that: selling a thousand buck TNC that is
outperformed by a $400 unit?

I am still unconvinced that anything beats my PK232, at least at this time.

Good deal, Rick. Well, you obviously sound like you know what you are talking about. If that's the case, then the DSP232 looks like my next purchase. No real hurry though, since AEA hasn't added any new modes to it.

That's really good news about the CPU though.

And while its plain silly to take a unit such as the DSP-232 and run it in
KISS, at 9600 it will transmit but nothing gets back from the modem to
your serial port. (another known bug, and a customer waiting on the fix).

It should probably be the other way around... if you want to operate
CW you will have to learn it first, and you will be tested in practice.
Inadequate CW knowledge will mean you can't make contacts and you
will automatically do further study to achieve your goal.
On the other hand, when you want to operate in voice there is no way
to verify that you can operate CW and thus you need to be formally tested.
(to remain within the international agreement that persons operating on
HF should have some proficiency in CW)

Message-ID: <6063.sv1uy@nest.sv1uy.ampr.org>
Source record: 37103

Hello all,

I am using my KAM TNC with ICOM725 HF radio for operating PACTOR and AMTOR
and sometimes I feel that my packets go out very slowly with a lot of
retries. There is usually no detectable QRM (at least I cannot hear it at
my end).

Is there anyone that has a similar setup and if yes please let me know
what parameters are you using at the KAM?

I use TXDAMTOR 5 (default value)
PREKEY 0 (also default)
POSTKEY 0 (also default).

I wonder if I should tune any other parameters for satisfactory PACTOR/AMTOR
operation.

Any info would be much appreciated.

Guess I will follow up to everyone here.

Depending on where you lived, landline and cellular phone calls could not be placed for one to two hours after the earthquake occurred. As I noted accurately in the online story, this occurred because of system overload. The story is very straightforward, points out that only minor (or moderate if you lived near the epicenter) damage occurred and does not overly dramatize the situation.

If you are suffering a medical emergency during a phone outage, you don't care if the phone is out because of overload or breakage - bottom line is you can't call for help. I, in fact, suffered a medical emergency earlier in the day that the earthquake occurred and was very much aware of the importance of having an operating communications link. Incidently, the next day, a heart attack occurred two blocks from my house (which sadly, ultimately proved fatal)? Who are you going to call when an emergency striks and your phone doesn't work?

The point here is that when the phones are out, the lifeline that people expect to use is not available. If you DO NOT have an emergency, then use of the phone does not matter to you. If you have an emergency, then it matters a big deal. Other disaster situations where phone service has gone out have shown that residents will attempt to drive to the nearest source of aid - typically a local fire station or police subdivision. Unfortunately, they didn't have communications either during this phone overload outage situation.

The local ARES/RACES plan is currently being modified to provide backup communications support at the site of ocal government agencies (e.g. fire stations) during telephone outages. Even though there was no "major emergency" and no one died - the point remains - a hell of lot of people could not have

called for assistance if they had needed to. That is the kind of communications outage for which ARES/RACES should be providing solutions.

This quake is yet another reminder to have the proper plans in effect *before* someone gets injured or dies. The story seems useful to others who are also designing emergency prepardness plans.

Incidently, since a few readers don't get it: Ham Radio Online is a hobby - it is free to you, self-funded, no advertising. Its an online ham resource. Some people build repeaters for other's to use - we decided to build an online ham radio resource instead.

I'm not sure I understand your question. There are many shareware programs
that will allow you to control your Kenwood transceiver from your IBM computer
under DOS or Windows. The upd7800 is not a ZILOG part, it was made by NEC.
Please remember the inputs to your Kenwood is TTL logic levels and the Serial
control lines from your IBM computer are RS 232 levels (you'll need to level shift).
I hope this helps. If you need more information feel free to e-mail me.

The real question in my mind - assuming AEA *will* implement Pactor 2 -
is whether they will implement the entire protocol. From reading the
technical description from the German company that holds the license to
Pactor 2 I understand that subset implementations will be possible. The
subset(s) will likely sacrifice some of the claimed efficiency of the
protocol.

I still think the Hal P38 running Clover is the best deal at the moment.

According to Bob McGwier, N4HY - who did the DSP code for the
DSP2232 that the DSP2232 IS capable of Pactor II - in fact he has
done some preliminary code to do just that. Note the Motorola
chip runs at 25 MHz in the 2232 while the DSP232 runs at 12 MHz I
believe. The capabilities of the Motorola chip are well
descibed. The development of future modems more sophisticated can
be handled by the 2232 but due to the dsp chip in the 232 - it
may note be portable to that platform. But who knows.

The basic problem is that AEA has not supported the DSP code in
the 2232 for a long time and the past president had planned to
use code development by N4HY for the 2232 (in progress at least
until the office of Presidnt changed hands - now who knows?) for
the 2232 in the 232 - as per Mr Proctor - personal communication.

While the DSp232 might be a better performer at this time I would suspect that unless AEA does a better job at supportig code development the 232 will soon fall behind other developments as welll!

N4Hy has already indicated that the reason the modems in the 2232 are not up to "snuff" is that his agreement with AEA terminated before he could refine and finish the modems. As a result - the 1232 and 2232 capabilities are not what they could be. Last year AEA entered into an agreement with N4Hy to upgrade the DSP code and modems in the 2232 and add a number of new features! He was well on his way to finishing this work till the changes at AEA. Now the work is in limbo - but I hope that the new president continues AEA's agreement with Bob.

Anyways - unless AEA shows interest in developing alll its DSP modems, I would be cautious about future expectations whether it be for the 232 OR the 2232.

Just some comments from a happy owner of a PK2323MBX and a DSP2232 - ALLL in use.

Have a great week!

Regards,
David Seeler, VY2DCS

Piers,

The "moving" pictures are actually a sequence of still pictures
received over a period of time from the satillites. Home reception
is relativly easy. The minimal way to get started is probably with
JVFAX7.0 or HAMCOMM these are shareware programs that can capture
WEFAX images from the audio output of your receiver. You may want
to try the Remote Imaging Group (UK) home page...
http://www.bbc.co.uk/john_wxpics/ng/index_html

Good luck,
Rolf

Sorry, but the IC-38A and its cousins (IC-28/IC-48) cannot be made to
transmit 9600 baud reliably. Its architecture, like most amateur
mobiles, directly modulates the radio's phase-locked loop. The PLL
attempts to correct for the 9600 baud modulation distorting the
low-frequency components of the data.

A local ham used an IC-48 for awhile with poor results until we
moved him to a UHF Micor.

Roger...

The insightful designers at HAL agree with you (and me too!)... Thats why the P38 and its older brother the PCI-4000 do not use IRQ's... rest assured that no IRQ's are used or required to install a P-38.... I have one and it was a no-brainer to install into an already loaded out multimedia PC on a network...

Well, that has both its pluses amd minusses. It means I can't use it
with my laptop computer, but on the other hand it allows for some fast
I/O to the card to implement neat things such as the tuning scope.

The problem with a shortage of interrupts is a real pain, but we should
blame the PC manufactures and not Hal.

This shouldn't make you nervous, you should be glad that you can
buy a better unit today for less than one you could buy a few years
ago... Just like PCs, better ICs hit the market everyday and the sharp
companies use them and pass along the savings to the customer...
That's exactly what AEA is doing, there is a much stronger CPU in the
DSP232 and as good or better DSP, both components cost less than those
used in the other unit.... This is the same as the Pentium I just bought,
tomorrow the P6 will be cheaper and better!

Rick

Actually, my understanding after discussing this with Thomas Rink (One of the Pactor II nventors) is that a subset implementation will simply yield a few less dB in the way of performance... not in speed...

Well, how to respond to such a posting???? First off, the clock speed does NOT NECESSARILY TELL YOU THE PERFORMANCE OF THE PART... If you look at microprocessors in general, many divide down the crystal frequency to the 'bus' speed... therefore, a 25MHz part running with an internal divide by 2 is no faster than a 12MHz part running with no divide. Secondly, you must look at the number of clock cycles required per instruction to determine the CPUs throughput. Thirdly, parallel processing can take place in many of today's processors that increase the performance even more (that is exactly what the DSP processor in the DSP232 does, it can execute three instructions in PARALLEL)

Your reference is akin to saying that a car whose redline is 8krpm is faster than a car whose redline is 6krpm.... There are many other factors that play in the performance arena....

I'm not disputing anything that Bob has said, but I would be very careful in telling the world things that may or may not be factual.

You'd be hard pressed to have an IRQ conflict with a P38. The P38
doesn't use interrupts on the PC side. There is a FIFO on board and
the host application polls the card's I/O address for data.

That is valuable information, Art. I'll have to ponder it. I have learned to dislike pc-card accessories, simply because in my experience they always involve a hassle. But if HAL has really managed a way around the IRQ hassle (and DMAs too?) that is a definite step in the right direction. All in all, though, I still would probably prefer an outboard TNC.

Then you doom yourself to a lifetime of suboptimal packet performance,
because no external TNC-like device can handle the channel access
protocols as well as one which is on the bus where the packet software
can access it without delay. The faster you go, the more important
this becomes.

And if that is the only reason that the DSP232 is cheaper than the
DSP 2232, you are right. However, is AEA not still selling 2232s? To
use your analogies, it would be like a firm selling an 8 Mhz 80286
computer for $3500, at the same time they were selling a P5 machine
for $2000.

Hey, I'm all for progress. The DSP 232 definitely sounds like a great deal.
Now let's see if they come out with enhanced modes for it to take advantage
of its apparently very considerable capabilities.

And no DMA channels .... Yes an off board TNC is a partial solution ...
(depending on your COMM port setup)... but PC compatibles still have
problems with limits on COMM ports.... it sure is nice being able to
have multiple "things" connected... i.e. mouse, modem, TNC... etc.
Having the Clover board as an internal card without IRQ's helps...

I do not believe this to be the case... HAL makes the 4100 (the external version of the PCI-4000 clover card) and it wors fine... I have my terminal software set up to communicate over the serial port to my PacComm PTC-II Pactor-2 unit at 38.4K and I think that allows plenty of time for the PC to access the unit without delay...

You can get the PMP (Poor Man's Packet) interface and software and use for this purpose... it will
hook up to the receive jack of a scanner for monitor only purposes. Of course this is a low cost
send and receive package, but all you want to do is receive.

Or you can get the Tigertronics Baypac and do the same thing. You can build the setup for $25, or
buy it for about $50.

Good luck.

FWIW, the Hal P38 does not require an IRQ and integrates easily into even loaded multimedia PCs. The internal card/external box choice does entail certain tradeoffs, but you should consider that the fast IO allowed by the internal card permits things like an on-screen tuning indicator, which is a feature I now wouldn't do without. I think the P38 is a terrific piece of work.

The red (HF) light comes on when the tnc decodes a signal as digital.
Sometimes random noise seens to fool it into thinking it's heard digi.
I've decoded pactor I couldn't hear by ear!

Did you know that about 50% of ALL U.S. Hams (about 340,000) are
either General, Advanced ot Extra?

According to the A.R.R.L. that is true if he did his math right.

That means one half of us are now operating at 13 wpm or more code
speed.

2434. What's my sub-gridsquare ?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-14 00:00:00 UTC
From: rma@mtgzcs5.mt.att.com
Message-ID: <4naag5$if1@nntpa.cb.att.com>
Source record: 37124

Most hams I contact know their gridsquare, but
I notice that lots of folks on VHF also seem to know
their "sub-gridsquare." That might not be the right
terminology; I'm referring to the two letter suffix
after the grid, as in FN20bk, which I assume is a
finer locator for one's QTH.

How do I find out my suffix? Do I have to know my
home's lat/longitude REALLY well? Is there any service
on the web or elsewhere to assist in mapping locations
to the suffixes? Any shareware? And, if I hear that
a friend is in, say, FM29ce, is there an easy way to
determine where that is?

The ARRL gridsquare map just lists the main squares,
nothing finer.

Thanks & 73s.

From: mead@dg.com
Message-ID: <4nadqi$cn4@dg-rtp.dg.com>
Source record: 37125

I am trying to get our packet system to be more reliable. I inherited support of the system and have had no help from the previous sysop. I have printed and read the manual, but still have a problem.

The system is comprimsed of:

2m / 1200 baud / tiny 2 mk2 tnc / TheNet netron / com1@9600
440 / 9600 baud / tiny 2 mk2 tnc / TheNet netrom / com2@9600
fbb 5.15c
bpq 4.08a
386/16 w/4 mb
DOS 6.22

The system works fine until 2 or more users are connected at the same time. The system will hard hang when under heavy use from multiple users. During light loads and single users, everything works fine. I feel pretty sure that it is either a problem with the roms in the tncs or my settings in bpqcfg.txt and port.sys. If you have a similar configuration I would really like to see your bpqcfg.txt and port.sys. I have been trying to solve this problem for a month and just can't get the right configuration.

Thanks for any help,

You can try downloading a file called GRID.ZIP from my homepage.
You will need to know your lat/long fairly precisely.

What does "outdated" mean, aside from the fact that it ascribes the characteristic of being a mature technology that has been superceded for some purpose(s) by newer methods? This has no relevance to the usefulness of Morse in the Amateur Radio service. To define Morse as "obsolete" (as opposed to "outdated") would require that some newer technology be available that would surpass *all* the advantages of Morse. As yet, such technology does not exist.

Lots of people out there want to operate HF without learning code. It reminds me of someone who tries to get a University degree, without ever going to school. Learning CW really isn't that hard, it just takes time and patience. One big argument is that CW is an outdated mode. Perhaps, but so is HF in a way. If you don't want to learn CW, you can still talk around the world via satellite, or on packet.

|Sounds good, but why do we need this? Do you want no-code techs to have the
|priviledges that novices do? No problem there either, if that is what you are
|Matt Roberts, KK5JY,
|mattro@radware.net
|

How about we propose a rule that says, Yes, no-code techs, who have not passed the written exams either, can have voice privelidges, but only at 4 watts. Wait a minute, that's CB.

Now, the FCC has started a Family Band somewhere. Don't know the allocations yet, but it's similar to CB. Oh, what's that ? You want world band privelidges at 1500 watts, and you don't want to learn the code even though it's a prescribed rule of the ITU ? Notice that noone who has ever taken and passed a Code Test has anything bad to say about the code ? Notice that there are no restrictions on using the code anywhere in any amateur allocations on HF ? Are you absolutely sure you want to operate HF without knowing the code ? Not even at a dismally acceptable 12 wpm ? And if you have a computer, and you are posting this, then there's code tutors that actually use your soundblaster, and can be preprogrammed with actual qso's used to take the code tests, so you're almost guaranteed a pass on code, but you don't want to learn it ? Is that what the problem is, you don't want, or feel a need to learn the code ? Face it, code is a regulation. If you want to operate on HF, you will have to learn it. Period. Even at 5 wpm. Period. Practice it. Learn it. Make no mistake about it, you will need it. Even if you never, ever use it.

Has anyone been able to run APRS in a DOSEMU session under LINUX?
I get it to work for a while, but it inevitably lock up the DOSEMU
session and I have to kill it. Just curios if anyone has had
similar problems and found a way to overcome it.

2441. Yeasu Computer Control Protocol

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-14 00:00:00 UTC
From: rhh@ct.picker.com
Message-ID: <4n9ovg$qqf@news.multiverse.com>
Source record: 37131

Does anyone know whether Yeasu publishes the computer-control protocol that's used in their ADMS software products? I'm looking for a mobile, and I'd consider an FT-8500 if I could control it (store/retrieve memories, change freq, etc.) under DOS and FreeBSD (don't like Windoze and never use it).

Since they're selling this software, I doubt its available, but I just thought I'd check. Thanks in advance for any info.

A person here at work had SP 7.02.079 running for a short time...until
he tried another packet program, which he subsequently decided that
he hated. :/ Now he wants his old program back. <sigh>

As sysop, I'm just trying to placate this user and get him back to where
he was. Can anyone tell me where to find SP version 7.02, or any SP version
7.x? I appreciate any help you can give...thanks.

I was told by Debra Jahnke, publications manager at ARRL, that none of the
new ARRL software would be out for Mac. I read in the add that the CD-ROM
had only a Windows-based search engine. I sent a polite e-mail to the
ARRL asking for Mac versions of software where possible (like both search
engines on the CD-ROM) and got this reply:

>Dear Ms. Fligor,
>
>Thank you for your communication. I shared it with our Product Development
>team. Unfortunately, at present, I don't see our software options changing
>radically in the near future.
>
>In order to justify development, startup and other costs we need to be

>Circulation and Publication Sales

I don't think that this bodes well for Mac ARRL memebers... There is still
some Mac titles available, as it hasn't sold well. Here is what they have:

>We currently carry versions of the software that accompanies the ARRL
>Technician Class Video Course and the software that accompanies the ARRL
>General Class Video Course. We still have a supply of accompanying Mac
>software to the book, Physical Design of Yagi Antennas. Due to lack of

>popularity, the mention of that software was dropped from our catalog, but
>we still advertise the Mac versions of the above Video software in the QST
>catalog.

From: brian@nothing.ucsd.edu
Message-ID: <4nd1gp$17b@news1.ucsd.edu>
Source record: 37048

The last time I lifted the hood of an AEA DSP 2232 (I don't own one, yet) it had a Motorola DSP56001 24 MHz part and was clocking it at, I think, 25 MHz. Using manufacturer's provided cycle timings, one could quite easily compare theoretical maximum performance between various products given similar data - chip type and clock rate.

As for McGwier's code, I'd lay a bet on it. He's been doing DSP professionally for longer than most of us had even heard of DSP.

Cross-posted to: rec.radio.amateur.digital.misc,uk.radio.amateur

Hello,

Flexnet's mail-list is available !

To subscribe, send an email to listproc@ham.ireste.fr, without
subject, and add the following line in the message's body :

subscribe flex your_1st_name your_name (callsign)

Eg :

subscribe flex Laurent Ferracci (F1JKJ)

You'll quickly receive an acknowledgement from the mail-list server.
To post messages, simple email to flex@ham.ireste.fr, and all users
will be able to read your mail.

We created FLEX :

. to help beginners who have troubles understanding the way PC or
RMNC/FlexNet work.

. to ease information exchanges : network maps, tips & tricks,
hardware, etc...

Please note that English is mandatory, since FLEX is intended to be an
international support to the FlexNet applications & hardware.

Let me thank Vincent, f1jln@ireste.fr who helped a lot starting FLEX,
and still takes time to validate new ftp logins to those of you who
want to get PC/FlexNet's package.

If you want to know more about FlexNet, see the following WWW server :
http://www.imaginet.fr/~ferracci/flexnet

Wotta concept!!!! Wish I had thought of it Pat. One license - One CW
requirement. Who knows, maybe we can even get back to a real exam
format vs. multiple guess. In all fairness to the digital folks we
could make a test on RTTY, or one of the TOR modes optional vs. CW.
How bout 1 minute of solid copy with paper & pencil. :-)

Opinions expressed herein are my own and may not represent those of my employer.

It's easy to argue that the CPU used in the DSP2232 already was outdated
and underpowered at the time they designed it in... it was only used
because their programmer was familiar with its instruction set.

WA3DSP, Doug Crompton, has spent a considerable amount of time making an
earlier version of JNOS run properly. ftp to crompton.nadc.navy.mil and
cd to /pub.hamradio/packet/wa3dsp and have a look around. I've been running
a JNOS BBS with his cleaned up version on a 286 with netrom and full AX.25
BBS forwarding for several years now. The longest I had it going was over
150 days with no intervention on my part.

>Also, is there a copy of TCP/IP that will run on an XT???

Look for the G1EMM versions by Kelvin Hill. Perhaps over on ftp.ucsd.edu
in the hamradio/packet directory chain.

>introduction on how to set up the KA9Q TCP/IP package.
>We now have a set of web pages with full details (see URL
>http://www.netro.co.uk/nosintro.html) which you might care to look at.

Very helpful pages, and a rather nice book.
But as it's aimed at people using KA9Q a text based Net interface
wouldn't it be a good idea to make it lynx friendly.
Looking at it in lynx you get:

[NOSintro Main Page]

[IMAGE] [IMAGE] [IMAGE] [IMAGE] [IMAGE] [IMAGE] [IMAGE] [IMAGE]
[IMAGE] [IMAGE]

.....

then a bit later

[INLINE] 356 pages of invaluable information for setting up KA9Q NOS.

[IMAGE] Fully illustrated with over 80 clear, detailed diagrams.

....

etc. Well you get the point, would alternative text be too much to
ask for??

It is more like getting an MBA degree but not taking any marketing
courses saying that "I ain't gonna do any marketing so why should I
take marketing?"

Or, getting a Law degree but not taking criminal law 'cuz "I ain't
gonna do criminal stuff!"

One could also argue that both marketing and criminal law are outmoded
because marketing is just sales nowadays and criminals aren't
prosecuted anymore.

The dumbing down of America!

Being like any other business minded company, I'm sure AEA is waiting for
the market to decide when the DSP2232's life is over. That would only
make sense. That's how the IC manufacturer's do it, they usually don't simply
drop ICs, they just keep raising the price until you decide you no longer
want the device.

Also remember that the DSP2232 is a dual port device which the DSP232 is not
currently capable of.

Rick

-- Is CW outdated?

What, exactly, does outdated mean? My dictionary defines it as:
"old-fashioned".

So What? A 1975 Ford Pickup Truck (or earlier year and make) is old-fashioned. With its breaker-point ignition, lack of computer-assisted engine controls, and carburetor-aspirated V8, it is merely extremely reliable, user-serviceable, tough, and long-lived. Many of them continue to soldier on, oblivious to their jelly-bean shaped descendants. Even older vehicles enjoyed longer service lives. Today's tinfoil and plastic will never give this value.

Canoes, sailboats, and bicycles are old-fashioned. Yet, we use these things, and many other old-tech things in vast numbers.

Why? Because these simpler inventions serve us, for specific purposes, BETTER than any new-tech device can. True, some of these purposes are purely recreational, but some are not. You can bike to work, save money, and decrease your risk of coronary, as many do. You can canoe in wild, unspoiled places and increase your enjoyment. A canoe is less costly, so your recreational dollar goes further.

CW is the bicycle, canoe, sailboat, motorcycle, and old reliable pickup truck of amateur radio communication. Old-fashioned? Maybe... but, for specific purposes, indispensable.

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

TAPR just came out with a CD with their software library and then some.
It should be ready for purchase this weekend in Dayton

No. Just change it so that all license classes pass a 20 wpm code test.

Message-ID: <3199F3D7.5ABD@epix.net>
Source record: 37145

I was wondering if anybody has a packet repeater ? I have found
quite a few but the creators have all left packet for the internet.
Hence my posting. TAPR used to have (pre 12/95) a bit regen board
for their modem but as many good things go, they can no longer
supply them. If you have one or have schematics I would be most
interested. If you created your own I would like to hear more
about it myself.

I have been working on one using the Modem Disconnect header (j5)
into some basic cmos logic to try to echo the modem data back
into the modem where the 16x clock will hopefully reclock the
data. I really prefer not to re-invent the wheel, it takes to long.
I see about 6 packet repeaters in NYS alone but have found very
little doc on them. I have also tried paccomms xanthus repeater
but without doc it looks very poor.. Thanks very much.

> before the F.C.C.?

> Send info if interested to: KE4IKT@sco-inc.com
Sorry, not interested. In fact it gets a little tiring listening to all the whiners complaining about the code speed requirement. In fact you would spend less time learning the code than it would take to change the requirement. If you would spend 30minutes a day for a month practicing, you should have no trouble passing the test. The secret is doing it nearly every day. Besides, a 5wpm multiple choice code test can be passed without even knowing the code - just using a crib sheet or a memorized dot-dot-dash table.

There are some good computer code tutors, give it a try; and good luck..KI7RH

Now that you've got the code under your belt you can build some simple gear and get on the air with it. You'll learn plenty of RF theory and practice that way, and I'll bet you even have fun.

That outdated technology will still get through when none of the other
technologies will. That's the primary reason that it's still a
requirement.

Lots of things in life seem like a waste of time, but later on in life you realize just how useful that information can be. You may never intend to operate CW, but I'm sure you will end up using from time to time. Maybe even being able to identify a non-voice ID on repeaters.

I'm becoming interested in the P-38. I read a review of it in CQ that was quite favorable. What we really need is a P-38/DSP 232 "shoot out" comparison, once the 232 features Pactor 2.

Of course the real problem selecting between the two is determining which high performance mode (Pactor 2 vs. Clover) one wishes to try. Right now I'm quite unclear as to whether one or the other looks to predominate.

Well stated, Jack! There are advantages to CW that have yet to be buried by the newer modes - and likely never will be! I am an avid packet user and see many advantages to the ever growing body of digital technology. However, CW has and, in my opinion, will long retain, an important place in amateur radio communication.

Weigh this by the fact that I am yet among the no-code Techs who have yet to master CW. The fact that I do not have access to the HF bands does not in any way diminish the ongoing worth of an "outdated" mode. Instead of bemoa
ning the fact that CW is still Greek to me and demanding my "rights", I'll choose to keep plugging away at the mysterious code untill I can finally whip it! I do not doubt that CW will still be alive and well when I'm an SK! But I plan to be able to pound out QRT on my casket lid while they cart me away!

So *that's* why NASA hires throngs of CW ops to receive data from
deep-space probes! I was wondering about that. And the military wasted so
much money on EMP-resistant comms, when all they needed was more CW
stations! Of course!

Followups set to rec.radio.amateur.flam^H^H^H^Hpolicy. Please respect that.

2482. Pulson & PPM Modulation/Demodulation

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-16 00:00:00 UTC
From: pecampbe@mtu.edu
Message-ID: <4nfet8$268@metlab1.my>
Source record: 37072

I've been reading Pulson Communication's ads for what appears to be a virtual perfect technology for digital communications. See:

http://www.virtualtimes.com/pulson/

They are using "wideband" pulses for communications. It appears that they are using repetition to make it possible to demodulate them.

It appears from their drawings that for a transmitter, they are probably using a simple LC filter on the transient output of switching a transistor.

They then go on to discuss some sort of phasing antenna but I think that the various wideband antennas out there (the microwave antennas that look roughly like two intertwined spirals) are probably just as good.

But my question is how in heck would someone build a receiver for it? The pulses are so far apart that it seems to me that if you built a homodyne detector (perhaps a delay locked loop with some sort of sequential scanning?), you would spend an awful lot of time slowly varying the delay (phase offset) on your detector before you finally locked onto the signal. Or does one just use a long preamble and wait for lock?

2483. Help - Paket 6.1 & KAM & Mail Forwarding

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-16 00:00:00 UTC
From: xherndon@ix.netcom.com
Message-ID: <319B90D5.52B1@ix.netcom.com>
Source record: 37073

I'm having a problem trying to get my packet station to forward mail to and from my local PBBS. I think I have my Paket 6.1 program correctly setup.

The problem I'm having is, after I connect to my PBBS (N4NIA in this case) I get a F> prompt but than my station sends a disconnect. There is mail in my station to be forwarded and there is mail waiting for me on N4NIA but no transfer takes place, I just disconnect.

My PBBS sysop knows I want mail forwarding. The sysop has even tried setting me up as a BBS vs a user, to no avail.

Any suggestions?

Hi Ken,

I am using the KAM Plus/TS940 with the ACC2 13 pinDIN. It works great.
The only caution was some info about if you run the 13 pin DIN you
might have to disconnect the front mic connection when using any
of thedigital modes in AFSK....I have no problems.

: purposes are purely recreational, but some are not. You can bike
: to work, save money, and decrease your risk of coronary, as many do.
: You can canoe in wild, unspoiled places and increase your enjoyment.
: A canoe is less costly, so your recreational dollar goes further.
:
: CW is the bicycle, canoe, sailboat, motorcycle, and old reliable
: pickup truck of amateur radio communication. Old-fashioned?
: Maybe... but, for specific purposes, indispensable.

All this is true but irrelevant. What we're talking about is your right as an American to use whatever means of transportation you find most convenient. As opposed to being required to pilot a canoe successfully to get your driver's license.

BTW I think comparing a 75 Ford to a modern one is a bit too close. The difference between CW and other modes is more like the difference between a pogo stick and all the other kinds of transportation.

While we're on this, I resent being put in the "dumbed down" category for not learning code. There are many of you that are dumber than I; merely witness your bigotry. It speaks for itself. I expect this sort of bickering will never end until 1.) the FCC finally comes to its senses and 2.) all of those of you who both remember these times and are too set in your ways to change DIE OFF.

I agree, CW is a filter for smart people. Kindof. But it's too narrow in that there are people (like me) who could eventually pass any kind of written exam the FCC could muster up, who resist CW due to its irrelevancy in their daily lives and the fact that the investment is too great to get such a small return out of it. The written exam is a much better "smart filter", if we

really need one at all. If ham radio is all about experimenting and finding new and better ways to carry out effective communications on the cheap, then the filter should particularly embrace people who exhibit ingenuity rather than mere "smartness". CW doesn't facilitate that at all.

And regardless what the FCC does (short of outlawing CW outright, which for those of you who haven't figured it out yet, is _not_what_we're_talking_about_) CW will never die. That's OK by me, but leave it for the historians, those who insist on getting through when nothing else will, and those who are interested.

2486. Gracilis PT and Kamtronics DE19K2/9K6 with linux

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-16 00:00:00 UTC
From: Carlo Fonda <cfonda@ictp.trieste.it>
Message-ID: <319AF94E.7CAA@ictp.trieste.it>
Source record: 37076

Hello,
I have two Gracilis PackeTwin Cards which I want to run with Linux and an
on board modem from Kantronics DE19K2/9K6. I have compiled a 1.3.93
Kernel including Gracilis utilities. Now the system recognize the card,
in fact i have two new interface PT0A and PT0B. Following what is
described in the Gracilis instruction manual I have removed the chips ,
configuring the PackeTwin to accept an On board Modem. But it is still not
working, if with an oscilloscope I check the TX data pin on the DB25
connector on the card, I have a continuous presence of "signal" ,it seams
to be data but I'm nor sure, and the PTT output is not moving ... From
the point of view of the software I don't think there are errors, I
did :
a) ifconfig pt0b 44.134.176.238
b) ifconfig pt0b netmask 255.255.255.0
c) ifconfig pt0b broadcast 44.134.176.255
d) ifconfig pt0b arp mtu 256
e) route add -net 44.134.176.0

if i ping 44.134.176.200 and after a while I type ifconfig
I see that the card has transmitted some packets but no RX ...

If you have any suggestion, or experience with PackeTwin, pleas e-mail...
I sent a direct e-mail to : gracilis@paccomm.com with no response ...

Thank you in advance Fulvio IV3PYL

>>You will need to know your lat/long fairly precisely.

Here is a fun way to find your lat/long via the Net and
a nice set of street maps.

Open URL:
http://maps.yahoo.com/yahoo/

click and zoom to get your street location MAP
then look at the Location in your browers window
"Show location " if using Netscape
and you will see something like this

http://maps.yahoo.com/cgi-bin/webmap?Template=yahoo&Context=-96.7664%2C32.8344
%2C10000%2C0%2C0&Icon=Smallcross%252C%252C-96.772439%252C32.830224&Width=320&H
eight=240&Map.x=277&Map.y=228

The -96.772439%252C32.830224 is just about my QTH in decimal Degs.

If you have access to a packet BBS running the F6FBB software, there is a
built in program which does grid square calculation. Input your lat/lon &
it will give you your 6 char grid square.

That's how I determined mine is OF78VB.

I'm happy to confirm that WA3DSP's modified JNOS is certainly one of the
best contenders for reliability in a 286 machine.

Doug's code has been used by us as an encapsulator / router interfacing
to a busy bridged and overloaded network of some 2000+ machines. We reckon
a mean time between crashing of some 90 days in a severe environment that
has seen other NOS's survive 3 days at the most.

K2MF also produces "ruggedized" code in his MFNOS derivation which is well
worth testing - it has recently undergone a major overhaul too!

>want the device.

I wonder if it would be so easy to tell if the patient were, indeed,
dead? When I bought mine the sales were in the hundreds of units,
which one would suspect for a "fancy" tnc in the kilo buck area. It
may be 'dual port' but still has limits on what each port can do. Why
is this? I have had requirements where I would have enjoyed being able
to use the unit on two HF radios at the same time but no way with the
current setup.. One of these days... Other than the 9600 and pacsat
modes I guess I could have bought two '232s and had what I wanted and
had a couple hundred left over. Too late we get smart, too soon we get
old!

You've got to be kidding!

It took me a year, not two weeks, to learn code well enough to get
my general. I could have learned an AWFUL LOT about RF theory in
the time I wasted learning how to be proficient at CW.

I've only met one individual who was able to get his general in two
weeks. All others were months or years. In one case I know of an
old fart who has tried to pass his general for 15 years and still
has not passed.

It is a well known FACT (from the current Surgeon General life line
studies and fire hydrant painting training centre) that CW ops live
7.3 to 8.8 percent longer than no-code types. Has to do with soothing
activities and pleasant thoughts that go with the CW ops knowing that
they have conquered something that others have failed to do. Check it
out with the famed dr. bafoofnik and my buddy Ohrstal Fembrock.

Actually Rob, you can always argue this point.... Designers rarely have the
opportunity to design with the absolute latest devices simply due to cost and
availability. It probably has more to do with the amount of software investmen
than it does with any one Engineer's instruction set knowledge.

How much RF theory could you learn in 15 minutes per day over a couple of weeks? You easily watch more than 15 minutes of TV commercials per day, but you're complaining that that was too much time to spend learning code?

> Since they're selling this software, I doubt its available, but I just
>thought I'd check. Thanks in advance for any info.

Yaesu CAT is usually documented in the user's manual of the transceiver,
sometimes in the technical manual (maybe only for the first units that
had the feature).
I have found it is not necessarily complete: on the FT-212/FT-712 I
found that some commands are not documented.

Note that you may not like what you read... the CAT protocol usually
specifies 5 bytes to be sent as 4800 bps ASYNC, but there may be additional
specs about "delay between bytes" that are difficult to achieve in
user-mode programs on systems like BSD.

ONE QUESTION.....
Are you connecting through a node?
If you are, then in the config. you need to set up the callsign of the node as the bbs callsign.
You probably will need a script, but I can't remember exactly. It depends on a few things....
Tell me if you are connecting to a node first...then we can go from there.

2504. Help Baycom modem on Pentium not working

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-17 00:00:00 UTC
From: wenter@aardvark.apana.org.au
Message-ID: <4nj0vj$tj0@panther.apana.org.au>
Source record: 37089

Hi, I've just upgraded from 386 to Pentium 75 and find that my
"baycom" modem no longer works. wonder why this is. I can transmit
with TFPCX but not receive.. I receive with Baycom but when I try to
transmit it locks the PTT up..

I've messed around with the bios but nothing there makes a
difference.. Also my bus mouse (Microsoft Inport) is not recognised my
Mouse 10 for dos but is by Mouse 8.20, Mouse 10/Intellipoint for Windows
works fine. (I'm still using 3.10, don't like 95)..

Thanks for any help...

This is what happens when the comport is 'UART 16550'. It's quite
simply too fast for BayCom (always), and for TFPCX as well (sometimes).
I had to add an extra I/O card with old-fashioned 8250 chips to my
Pentium to get BayCom going.

I suggest you do this and set the new ports as comports 3 and 4;
(3E8/IRQ5 and 2E8/IRQsomething else).

From: dsk@jhk.com
Message-ID: <4nj8aj$dqm@mule1.mindspring.com>
Source record: 37004

WHen using APRS75C, how do you get the screen to show only yhe latest position for a station on a regular basis? My mobile sends updates every minute, which I see as a gray car, but it leaves a trail of blue ones! If I hit JL then it will get rid of the blue ones, but I don't want to have to hit this all the time. Can APRS show only the latest posit for a given callsign, or maybe update the screen every minute?

Thanx for any help

says:
>
>I am still having problems with HAMCOMM the rtty is a jumble of letters
>and numbers which make no sense.

i assume that HAMCOMM does work, but i have never gotten the rtty to go.
is there any rule of thumb for selecting a mode, baud rate, and tuning,
or does one just have to experiment?

>Even when decoding Morse it seems that the software is too precise and
>displays letters prior to the completion of them being keyed - why?

i have had good success with Morse, though it pretty much has to be
very clean, as far as signal/noise, and keying consistency. having
played around with trying to machine read CW, though, i realize its
one of those 'trivial' software problems. like pattern recognition and
language translation.

For my TNC, a Tiny-2, there is a command CMSGDisc which if ON will
disconnect immediately after an acknowledgement of CTEXT.
CMSGD should be OFF, which is the default.
Could this be the reason ?
Hope this helps sort the problem, or at least suggests a
few more things to try.

2521. 2 Questions on KPC-3

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-18 00:00:00 UTC
From: Russ Roslewski <roslewskirb96.cs26@usafa.af.mil>
Message-ID: <319DFF9F.51B2@usafa.af.mil>
Source record: 37011

Hello,
Just a couple questions about problems (?) I'm having with my KPC-3
(v 6.0). Real minor things. First, the TNC no longer dumps the buffer to the
screen when I first load up the terminal program. Is there a command for this
that I accidentally changed? It used to work fine. Or is it a problem with
the terminal program (paKet 6.1)? I figure it's probably with the TNC; does it
maybe have to do with the memory allocations?
Second, (and REALLY minor), I used to be able to type in a command and
the TNC would do it, whether or not I actually had a cmd: prompt on the screen
(unless I put it in CONVERS mode, naturally). It was sort of like it was
automatically in command mode unless told otherwise. Now, I have to send the
Control-C to get it back into command mode. It was nice the other way; again,
is this some kind of command that I changed (or some software changed)?
Thanks for any help you can give me. These things aren't exactly what
I'd call vital, but they would be nice.

<<

I hope this response is posted appropriately, AOL does not permit me to
control crossposts.

There is only the "duct tape" mod for the 202. It's extremely good
intermod rejection is due to the narrow band it is designed to recieve.
It is software controlled also, there are no mods.

Other radios can be modified because essentially the same radio is used in
other bands, and so by swapping a few components the company can use the
same design over a wide range. This has the consequence of making them
not very selective. THe 202 is designed for 144 to 148 only.

For the "duct tape" mod, you will need another radio, and some duct tape.
IT has the advantage of allowing recieve out to the 160 meter band, and up
tthrough the gigahertz, with proper radio choice. :)

I agree with things the way they are right now--code required to operate on HF bands. You can go on the bands and get your speed up to aabout 10 to 12 wpm quite easily. then you can take your General Class license and operate with code or voice or ??? I wanted to get my general class license just so i could go on voice but now have fallen in love with code and think i will always use code, even when i can use voice..it's kinda like a secret society knowing that you can read code.

Learning code was not interesing to you was it. Learning history was
not interesting to me in high school and college. Now I wish I had
paid attention.

Actually, I'm "on the fence" on the code requirement issue. But it is

the best mode a beginner can use to learn the real basics of radio,
even digital radio. Perhaps the important basics are not digested as
well when clouded with the "more current" electronics technologies.
After all, ham radio is supposed to develop "...skills in both the
communications and technical phases of the art." (Part 97.1(c)
If the code logically can make this happen upon a good foundation,
so be it.

73,

Dick - W7DHS
P.S. This discussion probably should be in the amateur.policy group.
But at least it relates to the basic digital mode: cw.

Hey guys, please consider this a friendly reminder -- this discussion on CW has been worn out and over done for some time now. This is a Digital discussion group, and, while it is true that CW is the origional "Digital" communications mode, I think most people subscribe to this group to focus on the computer oriented digital modes. There are other ham radio discussion groups that go round and round about CW, like a dog chasing it's tail -- maybe you would be happier posting your CW arguments over there? Again, I wouldn't attempt to stop your discussion of this old topic, but respectfully suggest it would be better done elsewhere.

Just one man's opinion, but one I highly value!

Source record: 37018

Hello.
I was going to introduce the e-mail software "SPG-NEWS" for the packet radio
in March this year.
Thank you very much for having interested from SPG-NEWS.
However, when executed SPG-NEWS, I got a lot of reports that Windows hangs up.
Because I had operated only in Japanese version Windows in an English mode,
this problem was able to be found.
SPG-NEWS is scheduled to obtain English version Windows95 immediately and to
be tested.
The part thought to be a cause of hanging up was presumed and the program was
corrected.
The corrected program was up-loaded to my home page.
Please try by all means and look.

My home page:

>card TNC. I've had enough IRQ conflicts to last me a lifetime.

Well then, you can happily buy a a P38. I don't own one, but according to
the recent review I read in QST, the P38 uses *polling* rather than an
interrupt to get data from the card to the PC. Evidently the data rate is
slow enough that the software can just check a buffer for new characters
in between doing everything else it needs to do, without dropping
characters.

Just think--you don't have to chose between your phone modem and your
radio modem on COM2 because your mouse is on COM2 you can't share
interrupts between COM1/3 or COM2/4 :-). PCs are FUN!

2531. BBS Identification Strings

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-19 00:00:00 UTC
From: marty@trucom.com
Message-ID: <4nmge4$1fp@thepit.trucom.com>
Source record: 37021

Hello, Folks:

Can anyone tell me (or perhaps where I can find) details on the
connect strings sent by packet BBSs...

What I am looking for are details on the string of characters sent
upon connection... For example, FBB 5.15c sends:

[FBB-5.15-ABFHMR$]

The FBB-5.15 part is pretty clear (!) but what do the other characters
mean? They are clearly a way for the BBSs to trade info about what
feature/functions that they support, but where is the listing of this
info? And, for that matter, just who keeps the list of features and
their related character(s)?

Thanks!

2532. DxNet mail-list available

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-19 00:00:00 UTC
From: olecam@imaginet.fr
Message-ID: <4nn1li$qer@avalon.imaginet.fr>
Source record: 37022

Hi there,

A mail-list is now available for DxNet !

To subscribe, send an email to listproc@ham.ireste.fr, without
subject, and add the following line in the message's body :

subscribe dxnet your_1st_name your_name (callsign)

Eg :

subscribe flex Olivier Le Cam (F5MZN)

You'll quickly receive an acknowledgement from the mail-list server.
To post messages, simple email to dxnet@ham.ireste.fr, and all users
will be able to read your mail.

DXNET had been created :

. to allow sysop to be informed quicly of news about this software
. to permit an efficient debugging in case of bug
. to give support
. to help the author in improvement of the software by sending your
suggestion and opinion
. to ease information exchanges about DxNet

Please note that English is mandatory, since DXNET is intended to be
an international support to the FlexNet applications & hardware.

DxNet is a DxCluster cluster software compatible with Pavillon
software PacketCluster (tm). This software is in public domain (code
source is not available) and can be downloaded from FTP
ham.ireste.fr/pub/misc/dxnet. BPQ or PcFlexNet is needed to run DxNet.

Best 73s

Olivier,
F5MZN.

> Joop, PE1DNA (a no-code license)

In the US the "multiple choice" test is 10 questions based on the text of the CW message. Granted, it is possible to guess and possibly pass, but it is usually necessary to get enough information from the text to make an educated guess. Passing, by the was, requires answering 7 of the 10 questions correctly.

An alternative to answering the questions correctly is to have one minute of solid copy. As a VE, I have seen people pass that way instead of via the multiple choice questions.

The ARRL-VEC does NOT allow copying dots and dashes and then "translating" the code. Papers are checked during the grading process. Therefore the individual has to know the code.

There are advantages to having an internal device, but in my opinion
they are greatly outweighed by the disadvantages (cannot be easily moved
between machines, or used with a laptop, more difficult to troubleshoot
without front panel LEDs, etc.).

The COMM port issue really isn't that big of a problem: it is not
difficult to get 8 comm. ports into a PC under DOS, and it isn't that
hard to use them with well-designed software.

External is the way to go.

I agree its a totally outdated technology but then Ham radio has
become an outdated hobby itself.

Ask yourselves why there are no young people interested in ham radio.

Who wants to spend hours learning CW so you can talk to a bunch of
old farts who's conversation skills end at the weather. Most young
people would rather use the Internet which offers new technology
and challenges and is progressive - something ham radio has not been
since about 1920. (with the exception of the goodwork done by a
minority of Hams in digital modes - AX25 etc).

Its a sad reality that ham radio is controlled by its ageing membership
who are clinging on to their past and are paranoid about change.
In 10 years ham radio will be of historic interest only with no
spectrum as this will be taken over by more pressing commercial
needs.

And yes I am a ham and I have no intention of wasting valuable
brain space with CW, I would rather learn another programming
langauge.

Just my views....

Regards...

So here we are, we've come at the point were communications is more
important than radio.

Let's rename ourselfs to communication amateurs, give the amateur bands
to the cellular phone company, and from the money we save this way, buy
a extra ISDN line to the house and a cellular phone.

Who needs amateur radio anyway ? anything you can do with amateur radio
can be done better and more reliable via the abovementioned commercial
services. Since it's only the communication where it's all about, see
the original post.

Sorry for the sarcastic remarks above, but i do get a little bit angry
when radio amateurs try to solve problems they encounter in communicating
with non-radio methods.

Tim,

I have yet to get an SSTV program designed for the SoundBlaster to work.
What program are you using? What sound card to you have? Is it a true
"SoundBlaster" brand unit?

Hi,

I'm trying to power a simple BayCom-style packet modem from the serial port of my laptop but cannot do so unless I have at least 2 of the pinouts providing positive voltage. I'm having trouble initializing the TXD port (pin 3) of my DB-9 serial port to a positive (+12 volts) voltage. Do you know the port address and bit position parameters to effect this change?

2555. Update On Windows Baycom Software

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-20 00:00:00 UTC
From: jon@g7jjf.DEmon.co.UK
Message-ID: <A3Vf8DAFEMoxEw$+@g7jjf.demon.co.uk>
Source record: 37043

Hi All,

You may remember my recent posting about my new Baycom packet software for Windows. Well, I've had some feedback which has identified a few problems and hopefully, these have now been corrected. I have uploaded an updated version of the program to my web site so anyone interested can try it out. There is a small 'changes.doc' file there as well which lists the updates.

I would appreciate it if everyone who has tried the program would send me a quick e-mail stating whether the program worked ok for them or not. The response to the program has not been too overwhelming so far and I would like an indication as to whether the software is worth developing further or not.

Thanks again to all those people who have taken the time to provide feedback and bug reports so far.

Bye for now,

Jon.

1996 PACTOR FORUM

SPEECH OF PHIL SUSSMAN, KB8LUJ

NOTE:

This speech was given on May 18, at the 1996 PACTOR Forum.
Your comments would be apprecated. Please email Phil
at pactor@dnaco.net - Thanks !

Hello... and welcome to the 1996 PACTOR Forum. I am Phil Sussman, the editor of PACTOR NEWS, and your host this year. Joining us today are some distinguished gentlemen who will be speaking about PACTOR.

Ari Surkiss, 4X6UO, an avid operator from Israel; Gwyn Reedy, W1BEL, President of PacComm Packet Radio Systems; and Mike Lamb, N7ML, President of AEA. Pete Detwiler, WA2MFY, originally on our program, is unable to speak today and his words will certainly be missed.

Each speaker will make a short presentation and then our panel of renown experts will hold a question and answer session, hosted by Dr. Tom Rink, DL2FAK. So please save your questions until that time. Thank you and enjoy!

I want to lead off by presenting our annual Gentleman of the Year Award. This year there are two recipients, Frank Grover, KC2FI, of Elmira, NY and Roger Sykes, W2INY, of Sarasota Fla. When Harvey Hernandez, N4TEC, of Bradenton, FL. was having trouble with his TNC and software, Frank called Roger, who went over Harvey's house to help him. These are two true gentlemen: so congratulations Frank and Roger.

The world has changed since last year! The PACTOR WORLDWIDE USERS GROUP NEWSLETTER is now called PACTOR NEWS. And that upstart mode, known as PACTOR is finally gaining recognition, even from the ARRL. Would you believe there was an article about PACTOR comparisons in May QST ? How about that!

PACTOR-2 is alive and well on the air, especially in Europe. That is a testament to how well it works. Yet the use of PACTOR-1 continues to grow. Today PACTOR is one of the most popular modes for HF digital communication by hams.

But PACTOR faces two obstacles. The first is the Internet. Internet is a system that ties one computer to another. All you need is a computer and a modem. It does not suffer from propagation woes, it is faster than PACTOR, and is growing rapidly. Connections are common and cheap -or- even free! And no ham license is required.

Internet is a service and Amateur Radio is a hobby. The more we use Internet to make contacts, join news groups, use mail reflectors, exchange messages, or even to work DXCC on 14.4 Khz, then the more Internet becomes the hobby and Ham Radio becomes a memory.

Richard Rogers, N1URO, calls Internet "the 11 meters of computing" and cites a lack of discipline. Internet is not a mode, it is a medium, a conduit. It is a tool that I believe should be used by us to attract people into Ham Radio and not the other way around !

The second obstacle is ourselves. I write about PACTOR and think it is the best HF digital mode ever created for Hams. I would take my hat off the inventors at SCS, if I were wearing one.

But just because someone enjoys PACTOR, it doesn't mean they oppose other digital modes. We can respectfully make honest comparisons, however there is a fine line between offering ones views and assailing people with an opposing view. Some PACTOR aficionados are accused of leading a campaign of flame throwing and mode bashing. One nasty message fosters another and, as noted by Neal, ON9CNC, this leads to a "mine - is - better - than - yours" polarization in our digital community.

Those operating CLOVER are not our opponents. Neither are users of GTOR, RTTY, OR CW. They are our colleagues.

Yet we have problems communicating with them. Our non-PACTOR friends fear we are attacking their honestly held beliefs and thus we are all reluctant to interact with each other.

Someone once said, "the hardware makes the mode" while another author recently wrote, "it's the software, stupid." In reality we know a good system requires both hardware and software be designed to support each other. Likewise each of us has his own preferences, but for our common survival we must support our 'digital brothers' even if we don't always agree with them.

The time has come for columnists, manufacturers, software makers, and users to stop 'flailing' one another with derogatory messages -or- fostering descention with inflammatory editorials. Can we start by 'linking' together to adopt one uniform, binary file transfer protocol for PACTOR? Of course we can, if we choose to do so. We must work jointly to solve problems confronting our hobby!

All digital operators must collaborate to preserve amateur radio. Toward that end, when was the last time we had a non-ham our shacks? How much have we done in our communities to excite the curiosity of youngsters in the mystery of radio? Do we talk-up Ham Radio in a positive way? We must indulge in shameless self promotion if digital Amateur Radio is to survive.

We must forge good relationships with organizations that support us. To para-phrase Benjamin Franklin, "We must all hang together or we will all hang separately."

LADIES AND GENTLEMEN: Let us extend the hand of friendship. After all, PACTOR means 'mediator' in Latin. Let us lead the way by meeting, exchanging ideas, and interfacing constructively with each other. That is the purpose I see for PACTOR NEWS and for our future. Our pages are open to all digital hams, not only PACTOR users. If anyone wants to submit a regular column or share their views, they are welcome.. and this includes CLOVER, CW, GTOR, AND RTTY. Our door is open for any HF digital dialog ! If you don't believe that, just send copy !

Here is our challenge: Ten years from now Internet will still be around, but will PACTOR and will Amateur Radio? That's our choice. Let us choose wisely!

** ENJOY PACTOR AND MAY GOD BLESS YOU AND YOURS **

This reply is not intended to be a flame, or even a criticism of
the author for asking a legitimate question. The very question and the
fact that it is all too common an approach concerns me. The packet
node is down so lets abandon it an jump on the Internet rather than
fix the packet node. I realize, "you" cannot fix the packet node and you
want to get your messages through, but then why have the packet node
at all. The packet system will never compete with the Internet for
speed and ease of connectivity (unless the power goes out :-))
I relly think it is important to separate our Internet activities from
our RF activities or we will soon find the RF side so dependent on the
Internet that it will be useless on its own.
Just some fodder for discussion. It's been a lond day and I'm
in an argumentative mood. - Nothing personal Clinton!

I agree completely. Tonight I've moved my external telephone line modem
between 2 computers about 4 times. Plus there is nothing like *knowing*
the thing is turned off and won't answer the phone.

> The COMM port issue really isn't that big of a problem: it is not
> difficult to get 8 comm. ports into a PC under DOS, and it isn't that

I just barely got an STB 4-com in my PC with (2) more serial ports on the
MB. My Mach-32 video board apparently uses an address traditionally used
for COM 3 or 4. For a while I thought I'd only get 5 serial ports but
found a way to get all 6 running. But I wouldn't have had enough IRQ's if
it wasn't for the fact FreeBSD knows how to share IRQ's on that particular
serial board. So those 4 are on IRQ 12.

Yes, and not only that but all these problems started with computers.
If only we had not used non radio devices like computers then none of
these things would have come up and ham radio would still be as perfect
and wonder as it used to be in the good old days.

We should leave the communications to others on their wireline system
and soon of course their rf and wireline
integrated systems. Ham radio should not be used for practical solutions
to things like serious emergency communications and time value things that
would attract new people. Lets let it die a slow death with all the old
but really good things. [tongue removal from cheek now in progress]

Has anyone been experimenting with the speed settings for the
KAM regarding G-tor and Pactor??

If anyone has found that moving settings from defaults
produced better performance, I would be interested in
seeing this info posted to this newsgroup..

I was experimenting myself with ptup, ptdown, pterrs, gtup, gtdown, gterrs
and
a few others and seem to have found a better arrangement that
reduces the KAM's automatic speed changes so that it spends more
time sending traffic than negotiating speed-ups and slow-downs..

Where is this "charter" you speak of? It seems to me that a group's title that includes both the words "digital" and "misc.", is the perfect place to buy/sell a TNC.

Further it should be noted that rec.radio.swap has limited propogation...I dont get it, and know many other who dont either.

Take care.

The APRS 7.4 software supports only full TNCs, not the Baycom modem.
You'll have to buy a REAL packet TNC in order to use APRS.

Jerry Needell <jerry.needell@unh.edu> writes:
>... The packet system will never compete with the Internet for
>speed and ease of connectivity (unless the power goes out :-))

It could, you know. We hams have plenty of spectrum to do high-speed networking - megabit links between San Diego and Los Angeles are quite within the realm of ham radio networking, for example - but we're not doing it.

So I propose the question - what are you doing to advance the ham radio networking state of the art? You don't have to be the technical type, you know. Even just volunteering to help climb the tower to bolt the dish in place would be a contribution. Or donate some equipment or money. Or maybe you've got some tower or mountain-site space. Or just some time to put the cables together, or write the DSP or FEC software, or solder the DSP board.

I'd urge you to find the packet guru in your neighborhood and keep offering to help. He's probably not prepared RIGHT NOW to put you to work, but if you keep offering, he'll find something useful for you to do and together you can make a small step forward. Enough of those and we're far ahead.

Here are the settings that I have changed from defaults
when using the kam for pactor and G-tor. The intent is
to provide some additional "inertia" so that the arq link,
once established, does not spend so much time
re-negotiating speed changes. Also, when communicating
with a station that is a weak signal or goes into deep fades,
it takes more retries before the link times out.

GTOR:
GTDOWN = 8
GTERRS = 60
GTTRIES = 4
GTUP = 8

PACTOR:
PTDOWN = 8
PTERRS = 150
PTSUM = 8
PTTRIES = 8
PTUP = 8

If anyone else is experimenting with gtor or pactor
settings, please post your info to the newsgroup
so that we can all compare notes..

2574. X1j4 Node/Jnos

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-21 00:00:00 UTC
From: ehinton@ibm.net
Message-ID: <4ntjkj$46us@news-s01.ny.us.ibm.net>
Source record: 36964

Hi There,
Name here is Butch in Huntingdon, Pa., USA. I am trying to run my
Jnos with an X1J4 node using the same tnc and radio. I am using
a MFJ1270C Tnc. From the X1J4 docs and queries on this newsgroup,
I set the crosslink protocol on the node to Kiss 2. This did not work.
My jnos was not able to receive or send when using the X1J4 tnc.

Any suggestion would be greatly appreciated.

From: "B.A. Merrill" <plpath@ucrac1.ucr.edu>
Message-ID: <4ntj0t$ldl@galaxy.ucr.edu>
Source record: 36965

I need to locate a DOS program for logging packet contacts for Field Day that will check for dupes, etc. I can't seem to make the N6TR Log work with my system and I'm not sure it was designed for what I need it for. I will not be using CW. I am just simply doing packet connects either direct or via nodes. Friend using Easyterm but requires Windows and we still haven't figured it out totally.

Any suggestions?

Regarding a broken node that has prompted a writer to enquire as to "wire"
methods of linking:

In article <31A11C93.6973FA77@unh.edu>,
jerry.needell@unh.edu (Jerry Needell) writes so concisely
that not even I can precis his comments:

> This reply is not intended to be a flame, or even a criticism of
> the author for asking a legitimate question. The very question and the
> fact that it is all too common an approach concerns me. The packet
> node is down so lets abandon it an jump on the Internet rather than
> fix the packet node. I realize, "you" cannot fix the packet node and you
> want to get your messages through, but then why have the packet node
> at all. The packet system will never compete with the Internet for
> speed and ease of connectivity (unless the power goes out :-))

I can easily think of two kinds of people who may get involved in packet.

The first is someone who genuinely wishes to make use of packet radio as
a medium, and experiment with packet hardware and software simply as an
end in itself (similar to the way a "CW only" op makes use of CW). Our
second user of packet radio makes use of it as an ancilliary aid to their
mainstream amateur radio activities - they may like to read technical and
operating bulletins, and set up skeds or be warned of openings via packet
for example (the DX Cluster is also a like use).

By running in a temporary "wire" system to bypass a broken node until it
could be fixed, surely there would be no harm done in order that our second
category of packet user could continue to make use of the network to support
more conventional activities ?

Whilst an ardent packet enthusiast might suggest that backup routes via
radio should be provided, we must bear in mind that many radio amateurs
may not wish to invest in the equipment needed to backup the network for
say, the one occasion a year it may be needed.

> I relly think it is important to separate our Internet activities from
> our RF activities or we will soon find the RF side so dependent on the
> Internet that it will be useless on its own.

The resources of the internet are available to nearly all radio amateurs
worldwide who possess a telephone and are able to afford the necessary
costs. The character of the packet networks (AX25 and TCP/IP) are
more geared to the specialist nature of amateur radio than the internet
will probably ever be, and if the internet is capable of "taking over"
from our radio based networks, we should now be seeing now huge droves
of amateurs in the major developed countries abandoning packet for

the net. The numbers of "parrallel users" of packet and net are increasing but packet has yet to show signs of dying (at least in this part of the world)

I think we should recognise that there are at least two types of packet radio user, and that which is sauce for the goose is not always sauce for the gander. Wire linking may be justified in a backup capability and also in circumstances where the use of high speed packet radio for linking on a "long-distance" scale is not yet justified by "state of the art" technology and the bandwidth that would need to be (willingly) surrendered by mainstream amateur activities. Please note that I'm especially thinking of "live linking" and time-critical applications used by our "second category" here, and do not wish to demean the activities of HF / Satellite mail forwarding gateways, or those developing pioneering techniques in digital communication over radio.

There is some solace for "anti-wire" campaigners in that radio will still be needed on the ends of the wire. There is also the possibility that a well placed wire might encourage packet radio activity, and also the upgrading of local systems to "state of the art" standard.

> Just some fodder for discussion. It's been a lond day and I'm in an
> argumentative mood. - Nothing personal Clinton!

Hope the above gives you something to get your teeth into. I am no fanatic, so don't be surprised if any further response from me happens or is lukewarm !

73, Gareth.

I'm at a loss to understand how someone who admittedly doesn't know
code can go on and tell us how boring HF conversations are. Since
about half the HF QSOs occure via CW, it seems you'd need to know
the code first to be able to judge the content of all the communications.

>In 10 years ham radio will be of historic interest only with no
>spectrum as this will be taken over by more pressing commercial
>needs.

Really? There's no commercial interest in our HF frequencies; we've
gained spectrum down there over the last decade, and probably will
gain more in a couple years. The commercial folks are interested in
that portion of the spectrum where one doesn't need a coded license.
So if you're so concerned about the possibility of losing UHF-and-
above spectrum, get to work on that no-code license and be fruitful
up there.

Butch,
We ran into the same problems and found out that we had to reset the
TNC after boot and it would work...In the case of a remote site, IT WON'T
WORK...It didn't appear to have any affect when we switched PC's or
TNC's....We were totally perplexed by the problem...

It is over. Have a look at www.arrl.org/iaru and click on the very first link; this is to the FASC committee discussion paper. They have already decided to ask that S25.5 or 3, forget which be dropped from the ITU international treaty which nations sign that issue amateur radio licenses. So, CW as an international treaty req may, very soon, be gone. Look at paras 9.12, 9.13 and 9.14 for why they want to drop CW and go on to other issues; such as what SHOULD be the requirements for HF spectrum technical/operational requirements to obtain a license be?

: That outdated technology will still get through when none of the other
: technologies will. That's the primary reason that it's still a
: requirement.

Of course the military is the exception. For high command level (commander in chiefs) they dumped the outdated technology years ago and went to spread spectrum with computers running it. It's more reliable and is capable of transmitting extremely high speed when the other modes just can't get through. What do you think they'd run if there was ever a nuclear war, CW? CW doesn't get through, spread spectrum does.

I've been licensed over 17 years and do have CW. Even took my 20 wpm at the FCC office back in 79'. Today though I look at CW as a 'mode from the past'. It has it's place in this hobby, it's fun to do, but I lost interest in it entirely and havn't sent/received code in about 3 years or so, and I have no plans on using it again unless I get in the mood to 'step into the past' and try an ancient mode of communications. Then I'll enjoy it for nostalgic reasons, much the same way people operate AM, 160m, or some other mode of band. They certainly aren't efficient, it's more for enjoyment now.

>David Wei E-Mail Address: davidwei@uvic.ca
>>>snip<<
I do not want to start a flame war, but, if I understand how torroids
work, they should not interferre with telephone/modem operations. The
RF(interferrence) is common mode, while the telephone "signal" is
differential. Because both wires go through the torroid, the inductance
"cancels" out. But the RF sees the full inductance. Anyway, I am running
14.4KB on a telephone "way out" in the country. (about 6miles from the
nearest "substation") And I have multiple torroids (and gass discharge
"lightning protection" devices) on the phone line. (And every other line
into our home)
The rf from the pc was greatly helped by the torroids. But it helped
reduce the EMI even more when I placed "split cores" on all the antenna
coaxs. And when I put a piece of 18gauge sheet metal on me desk top all
but a few birdies were gone. Everything is grounded to that "ground plane"
and the sheet metal is grounded, thru the thickest, shortest braid I could
get.(about 6' of 3 paralleled 1/2' braid). I never could get the printer
quite enough, so I live without one. I just "dump" stuff to floppy and
print it at work. (besides, my radio room is rather cramped and I do not
use a printer enough to really worry about not having one)

bruce@snoz.manawatu.planet.co.nz (Bruce Kingsbeer) wrote:

>Ask yourselves why there are no young people interested in ham radio.

Cost prohibitive would be my first guess. Second guess would be
it requires some effort to get into - most 'young' people today
are in the 'world owes me something' mode. Very typical of the
'internet set'. Read some of the business posting. A million
internet users have a business that will make you rich with no
effort required on your part whatsoever.

>Who wants to spend hours learning CW so you can talk to a bunch of
>old farts who's conversation skills end at the weather. Most young
>people would rather use the Internet which offers new technology
>and challenges and is progressive - something ham radio has not been
>since about 1920. (with the exception of the goodwork done by a
>minority of Hams in digital modes - AX25 etc).

Since you stated later in your post that you don't waste 'brain
space' on CW, I am not sure where you get your information on who
is talking about what with CW. Perhaps you are quoting Drew ?

A lot of hams are interested in the technology, not the
conversational factor. When I was interested in building HF
antennas, I wasn't doing it to see what marveous people I could
find on HF to have stimulating conversations with - I was doing
it because I wanted to see if I could construct a good antenna.
I don't know if you realize it or not, but ham radio is a hobby
that attracts a lot of very introverted people. A lot of these
people would not be able to carry on a converstation *at all*
with people they didn't know if they had to do it in person as
opposed to behind a microphone or a key. The constant referals
to the 'old farts' in these posting shows one thing - you are new
to amateur radio. Apparantly you think amateur radio is what you
hear in the U.S. every evening on 40 and 75 meters. Don't forget
about the rest of the world. Wait for a sunspot cycle peak before
you decide that everyone who is on HF is an 'old fart'. Sure,
there are a bunch of old guys who are retired and use ham radio
to keep in touch with their friends. Someday, if you are lucky
and don't get run over by a bus, maybe you will use internet or
ham radio for the same purpose - then you will be somebody else's
'old fart' if your theory is correct.

Bruce, Please give us all some examples of 'new technology and
challenges' that the internet provide. I had a modem hooked to

a PC 15 years ago. Been there, done that. Computer programming
? Been there, done that.

>Its a sad reality that ham radio is controlled by its ageing membership
>who are clinging on to their past and are paranoid about change.
>In 10 years ham radio will be of historic interest only with no
>spectrum as this will be taken over by more pressing commercial
>needs.

Same thing was being said 20 years ago - hams were complaining
about 'tube' articles in QST instead of new 'hi tech' stuff. Ham
radio will never go away - there are too many people making money
from it for it to ever disappear.

Nobody is controlling you Bruce, Since you have a ham license
you can do anyting with the hobby that *you* want to do. If you
want to invent new a spread spectrum communications capable of
transferring digital data via a radio link at two megabytes per
second, go for it . Make an HF version and call it Bruce-Tor if
you want to. If you want to invent a new type of antenna with
more directional characteristics than a yagi or quad, go for it.

I think what you are trying to say is that you feel 'controlled'
because you can't get a no-effort Extra Class ham ticket.
It's called 'incentive licensing'. Been around for years.

>And yes I am a ham and I have no intention of wasting valuable
>brain space with CW, I would rather learn another programming
>langauge.

If the internet and computer programming are more interesting to
you than ham radio, I am curious as to why you bothered to get a
ham license ?

Microwave at Dayton - definitely on the rise, and I don't mean the DSS cheater cards, I mean real hardware. For example, one surplus dealer had pulled an entire set of Narda directional couplers, and was selling them for only $25.00 each! These were pulled out of almost new equipment. He had a complete set - 1-2, 2-4, 4-8, 8-18 GHz, and had 10, 20, and 30 dB couplers in each range. These couplers looked brand new! I sell microwave components for a living, and almost bought the entire set from him for resale, but didn't because I only sell new components.

In the old days, we use to speak of 1296 EME with hushed tones, as it was some sort of black magic and was very expensive to get into. Lots of experimentation at 10GHz and up these days. Gunnplexers were selling like hotcakes.

in a nutshell...

It should be recalled that marine radio gear requires FCC type
acceptance. Ham gear modified for marine use is, except in emergency,
illegal.

Check ftp://oak.oakland.edu/pub/hamradio/mods/ for mods information
if you want to go ahead anyway. I don't know if the DJ-580 is listed
there, but that site is among the most "well-stocked".

Do anyone of you know anything about digital radio?

I'm interesting in the technical, and transmission methods. Also if the price of transmitters will be low, so local radio channels can afford a transmitter.

I'm looking forward to cd-quality radio...

I don't think anyone knows this, and it's not something I lose any sleep over. I have had a number of Clover QSOs over the past several weeks and have to tell you that the full duplex nature of the mode is a gas. You should get a demo of the P38 running with Express 3.6 software. I don't think there's any Windows-based software supporting the AEA modems that is as slick -- certainly not Pakratt for Windows. BTW, I'm using my P38 in a Pentium-based PC running OS/2 Warp and it works fine both under OS/2's DOS or its WIN/OS2 subsystem. You don't need a spare interrupt and you don't need an extra COM port. The P38 is designed so that much of its code is downloaded at run time, which makes it easy for HAL to release updates and bug fixes. They have issued several, including a major new release supporting new features in the past week or so. One has only to grab the new code off the Internet, put it in the proper directory and fire up whatever terminal software you're using. The new DSP and controller code is downloaded to the card automatically. This is obviously a superior method to having to order new EPROMs to get new software features.

This was very interesting! I have not seen this idea before.
Please tell us more about how you connect the equipment to ground.
Do you connect the equipment directly to the plate, or do you connect
the plate and the equipment to a common ground point ?

Come on Thomas, the Web server already exists, even if it's not official : if only PC/FlexNet author, DK7WJ, answered his mails.... I'm not the only one who complains about this fact. PC/FlexNet is a great software, but the German support doesn't exist :-(Ask those who are still waiting for an answer, and will certainly not get any...

At this moment, we are three French hams trying to promote it outside Europe, doing our best to explain how it works.

The PC/FlexNet URL is mentionned at the end of this mail, and a mail-list exists : send a mail to listproc@ham.ireste.fr, no subject, and the following line in the message's body :

subscribe flex your_1st_name your_name (callsign)

Eg : subscribe John Muprhy (G6XXX)

Chris, maybe you should try reading the "Guide to the Personal Radio
Newsgroups" bulletin which is posted periodically to all of the rec.radio
newsgroups.

I'd bet that your news provider deliberately does not carry groups with
"for sale" ads, and as Brian pointed out that could soon include this
one. If you want to see ever so many more 4sale ads, ask your news
provider to carry rec.radio.swap for you.

From: tedwards@Glue.umd.edu
Message-ID: <4nvuc5$ect@kolo.isr.umd.edu>
Source record: 36991

My situation is that I will be moving to a half-mile away from the UMCP campus soon, and I am trying to work out a fast way to communicate with the amateur radio club there.

I am aware of the Grapes 56kbps modem ($250) which will require a $300 transverter, a $100 down-converter, and a $75 dollar pre-amp on both sides. At $700 per side, it starts getting pretty expensive.

Does anyone have experience with the n6gn 2 MBPS, 10 GHz microwave link described in the ARRL Handbook? What about other solutions?

I'm not sure if this is a good idea. There's something about all those kilowatt HF rigs huffing and puffing into multielement giant antennas, putting 20 or 30 char/second through the air, relaying from one ham station to the next, sometimes taking days to cross the continent, that you'll never get from slipping the stuff over a 28kbps dial-up connection. Internet may be fast, convenient, efficient, and cheap...but dag nabit, its not RADIO any more !

Nostalgia and esthetics aside, one very good reason not to rely on Internet for message traffic is that one of the justifications for ham radio is emergency service; any kid with a $1200 Canadian Tire Pentium can pass "traffic" over the Internet if the phone lines are OK, but it takes a real operator to move messages during a disaster when perhaps the local land-line network is too busy or broken. All those for-sale items and flamefests about CW are just there to keep the network filled up and operating until its really needed.

73,
Bill VE4STW@VE4KV.WPG.MB.CA (which BBS still has HF connections though I suspect its 90% Internet now)

My PC interference was substantially reduced by using the
snap-together toroids on the modem cable between my com port and TNC.
The TNC did not have to be powered on, just connected to the pc to
radiate. I saw no real improvement until I had snapped four toroids
on the modem cable and every one I added after that reduced the noise
until I got up to around eight, then no noticable reduction.

I had the same problem with it getting into my HF rig and
found out it was all coming from my monitor. The only way I
could correct it was to line the whole inside of my monitor
cabinet with a metal foil tape that was used for wraping hot
pipes and etc. I got it from ACE hardware. There is also a
spray out that is an RFI spray but hard to find. I could
have gotten some but would have had to buy a case of it for
around $200.

JN>the author for asking a legitimate question. The very question and the
JN>fact that it is all too common an approach concerns me. The packet

Hey, I agree. Ya see, here's what might happen. The owner of the PBBS has no time for it. He is trying to find someone to take it over, but so far has no luck. I said I would, but I'm in a different town and have to go through the node to get to the BBS. My path to the node is very poor, not good enough to move all the mail the BBS moves. I don't have full-time access to Internet either, and couldn't afford to do that anyways, just asked..

As for abandoning the node, or putting up another one, I'd like to, but that's a long story with petty little gripes within the clubs and I have no time for it.

JN>I relly think it is important to separate our Internet activities from
JN>our RF activities or we will soon find the RF side so dependent on the

I agree. There are even 2m repeaters linked via phone lines. I think that's how the Evergreen Intertie gets into California. I even heard a couple talking on 80m about plans to link a 2m repeater in the US to one in Japan. Very anti ham radio IMHO.

Our group operates a 9600 baud digital repeater in the Denver area.
It uses the TAPR 9600 baud modem with bit-regen option and works
great! We run 4 megabytes thru the repeater every day with very
few retries.

We have a 1200 baud digital repeater under construction. We use
an MFJ-1270C and a bit-regen board offerred by August, KG7BZ
(Kg7bz@aol.com). Initial testing looks good.

Sounds like getting on HF was more important to you than learning all that theory -- that's OK by me, but since you made the choice voluntarily I'm not sure why you bother to tell us what you -could- have learned instead of "wasting" your time. BTW, the best way to improve speed for most people is to operate on the air, and since the presumed purpose of getting a General is to get on the air on HF most of the time you say was wasted could have been spent doing what you apparently want to do anyway -- communicating on HF.

Anyway, now that you're on HF you can continue learning that RF theory and practice the best way possible -- by hands-on experience and experimenting. At some point everybody has to put down the books and actually make something if they want to learn about RF theory. And you might have a lot of fun to boot.

>voluntarily ...

It was involuntary, if I wanted to get on HF VOICE.
Learning CW was a WASTE of time. Learning RF theory would have been
MUCH more benficial that being forced to learn a dead language, CW.

>I'm not sure why you bother to tell us what you -could-
>have learned instead of "wasting" your time.

Because there are a lot of old farts here who like to complain
about "whiners" who are to lazy to learn CW. Well I learned CW
and still don't like it, don't want to use it, and feel my valuable
time was wasted. I want HF voice priveledges. CW is irrelavent and outdated.

>BTW, the best way to
>improve speed for most people is to operate on the air, and since the
>of the time you say was wasted could have been spent doing what you
>apparently want to do anyway -- communicating on HF.

I had no intention of "getting on the air" CW style.

>Anyway, now that you're on HF you can continue learning that RF theory
>and practice the best way possible -- by hands-on experience and

>actually make something if they want to learn about RF theory. And you
>might have a lot of fun to boot.

At this point, I don't know enough about HF theory to build anything,
but I do know CW at 13wpm.

Picked this from packet some time ago:

From: G7MYO@G7MYO.GB7BED.#21.GBR
To : FBB@WWW

Hi,

I've been working on something recently and thought some of this info may be of
use to people. I have (I think) a fairly full description of the various flags
in the SID of BBSs.

If you can add any more please tell me!

Summary of SID meanings

A - F6FBB - Supports 'A' type of message (Acks) - avoids addition of R: lines
B - F6FBB - Supports binary mail forward (requires F also)
C - CBBS - Clock set support (for PMS - MBL only?)
1 - F6FBB - Supports version 1 binary mail forward (requires B also)
[forward resume]
F - F6FBB - Supports FBB forward protocol
H - - Supports Hroute system
I - - Supports the null command (starts ';') (found in tcpip)
L - G1NNA - Supports G1NNA compression (obselete?)
M - AA4RE - Supports MIDs
R - AA4RE - Supports extended forwarding responses
$ - WA7MBL - Supports BIDs (must be last character)

Details of FBB things can be found in the FBB 5.15 manual.

Compiled by Charlie McIver (G7MYO)

I am having trouble gitting the ver. 3 hyperlog program to see the
Kam + ver. 8.0P. It seems that the Abaud is wrong, I have it on 9600 in
the program and 9600 in the Kam + but I still get junk on the screen
when I turn off the Kam + and then turn it on with-in Hyperlog.
I have tried the Kam + in Qmodem and it works fine but not in Hyperlog??
Has anyone been having trouble with the same thing ??
I would like to see how you configered your Kam + and how you Hyperlog
CFG file looks like if you have it going .

yes I have called the programer and we worked on it for about 30 mins
over the phone and he don't know why it is doing this ????

Anything you can add please let me know.

Thanks Ron N1OLF

Hi Ron, if you want to be like the military, why not join up for a
4-year stint. I bet you're one of those guys who wears camos and
has assult weapons!

The lucky military has billions of dollars to spend on their comm
systems which results in their communications being practically immune
to *anything*. To compare us with them is ridiculous.

Hams mode of choice is voice. How much voice traffic is still being
passed on the military circuits?

(Keep in mind that voice is just about as old a mode as CW. Hence, if
CW is archaic, then so is voice.)

Yeah, that old argument. I suppose paying for items you buy is also
involuntary, since you can't get the item unless you pay for it.

>...Well I learned CW
>and still don't like it, don't want to use it, and feel my valuable
>time was wasted. I want HF voice priveledges. CW is irrelavent and

>At this point, I don't know enough about HF theory to build anything,
>but I do know CW at 13wpm.

>
Interesting binary world you live in -- you can -either- study code
-or- study theory. Of course you -could- have gotten on the air at
5wpm, increased your speed, had some fun and built some simple gear
(fun again). But then you would have had to let go of the attitude.
Guess that was more important to you.

2637. Linux Software ??

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-24 00:00:00 UTC
From: arh2@doc.ic.ac.uk
Message-ID: <4o44kj$p4j@motmot.doc.ic.ac.uk>
Source record: 36927

Hi,
Does anyone know of any Linux decoding software ? In fact, is there
any Ham orientated Linux stuff (Logging programs etc.) ?
Regards

Tony Hckson

2638. JNOS for DataEngine (JNOS40)

Newsgroup: rec.radio.amateur.digital.misc

I just updated my web pages to include one for JNOS40... Johan's JNOS
for the DataEngine....

You can ftp the latest files from there.... I've also included a
"mini-FAQ" and a copy of my "working" autoexec.nos file....

See http://www.mindspring.com/~bobm

or go straight to the files at

ftp://ftp.mindspring.com/users/bobm/jnos40

Come on Eric, i've changed a lot of mail with them. Don't blame them if
they're too busy to answer the > 50 messages daily, they're just spending
the time to write good software.

They have an official web site, it's on http://home.pages.de/~flexnet/ .
It's VERY new, so not finished yet. But at least it's an official
distribution site for PC/FlexNet on the Internet. That's what we've been
waiting for...

Don't complain too much, if you're not paying for the service. Eventually,
the service provider might get enough of it and start making money of it.

Actually I think you'll find that people were talking to each other long before Morse code was devised in the late 19th century.

Not to mention the fact that the device in question is not
a radio, and was not offered for swap but for sale.

Maybe alt.sales.ham-radio-stuff.tnc perhaps?

Now just where *is* the charter for this group, and
who decides what that charter should be like?

Interesting.... I think we should kill Latin too.... :) BTW didn't this thread
started with someone saying that over 50% of whatever people's abilities
is below whatever (forgot which one was it.... the thread is getting long..)

From a car nut's point of view, we should ban man from buying convertables
since over 50% of the convertables are sold to women, why not ban the
sale of the convertable altogether, since it don't have such huge portion
of the market as other hard-top model..... :)

Well I guess all the above says all, kill everything that's below 50%,
and when you need to use something that's been killed because of this,
don't cry.... :)

: >
: >Sounds like getting on HF was more important to you than learning all
: >that theory -- that's OK by me, but since you made the choice
: >voluntarily ...
:
: It was involuntary, if I wanted to get on HF VOICE.
: Learning CW was a WASTE of time. Learning RF theory would have been
: MUCH more benficial that being forced to learn a dead language, CW.

Latin's a dead language (so they say) but it's still in extensive use.

: >I'm not sure why you bother to tell us what you -could-
: >have learned instead of "wasting" your time.
:
: Because there are a lot of old farts here who like to complain
: about "whiners" who are to lazy to learn CW. Well I learned CW
: and still don't like it, don't want to use it, and feel my valuable
: time was wasted. I want HF voice priveledges. CW is irrelavent and outdated.

Then perhaps you should address yourself to learning foreign languages.
English being a minority language. Surely "voice" would include
Cantonese for instance. Seems you've got your principles knickers in a
knot!

It's not so much "whiners" as "whingers" who can't get their own way as
minority group. If you don't like it then "get out of the kitchen!"

Cheers....Mike

Okay boys, you know I meant "voice as a radio communications mode"!!!
The fact still stands that voice (as a radio mode) is just about as old
as Continue Wave (CW) transmissions; both came along in the early 20s.

From: marty@trucom.com
Message-ID: <4o79f6$vad@thepit.trucom.com>
Source record: 36942

Hello, Folks:

I am in need of information about some details on specifications for Packet BBS programs and how they communicate certain things. In particular, I need:

(1) The initial connect string sent by a BBS (my FBB 5.15c sends the string [FBB-5.15-ABFHMR$] on connection). I have found some data on this in various BBS documents, but there must be a place/person/group that keeps track of what the various characters in the string are used to mean. Where can I find this information?

(2) Where can I find the specification(s) for things like the BBS R: line?

(3) In general, who keeps track of the specifications for Packet BBSs and where can this info be found?

Many thanks!

Take Care & 73

We have a small network up here in Minneapolis on 50.45. There's three of us that run TCP/IP just fine. I have a dipole and put about 10W into it. Another ham has a beam (horizontal) and I forget how much power. He's about 10-15 miles away. Once in a while we have problems, but not sure why. We have some really large power lines in the path and we think it's related to that, but that's _pure_ speculation. Most of the time it runs fine. He also has a gateway to our 2m TCP/IP.

Range seems to be better on 6 than what we used to do on 2. On 2 I had a much better antenna than I do on 6.

How lucky you are: usually DK7WJ **NEVER** answers any mail (I'm not the only one who complains). However, the rest of the team (DG2FEF, HB9JNX, etc...) is VERY efficient, congratulations.

> They have an official web site, it's on http://home.pages.de/~flexnet/ .

Right, and the different WWW pages I saw are great, but I regret you still need to register to get the kernel : to my mind, it's certainly not the best solution to spray PC/FlexNet round the world :-(

We'll certainly change our mind on the French WWW server, with an unlimited access to any EXE files, since we begin to have too many logins now (more than 120 today).

> Don't complain too much, if you're not paying for the service. Eventually,
> the service provider might get enough of it and start making money of it.

Listen, I've been using FlexNet (RMNC or PC) for few years now. They are wonderful, but the user-support isn't efficient. F1JKJ, F1JLN, and I have been doing our best to change this situation, opening a French packet-radio mail-list, and now an English one. I've also typed English and French PC/FlexNet manuals which helped lots of users getting started with the software. What has been done in Germany till now ???

Maybe I'm working alone, but I work, and try to promote a software I like and use everyday. I don't have to pay for a service : I already offer a service, for free :-))

2657. TNC vs Buffered UARTs

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-25 00:00:00 UTC
From: crawford@uniserve.com
Message-ID: <4o7uk2$980@atlas.uniserve.com>
Source record: 36945

Hi:

I've just upgraded to a new mother board which has built in serial ports etc. COM1 and COM2 are both supported with buffered (XX550A) UARTS which my previous system did not have.

Now it appears that data is being held in the buffer causing TPK to dump message transfers and add garbage at the beginning of some new lines. This did not occur on the old UART. I've proven the UART as okay with a diagnostic program, as well I hooked up an old external 2400 modem to the same COM port and it worked fine. This problem shows up using either a PK-88 or KPC-3. If I hit F9 (unconnected state) the buffer will dump itself to the screen and the problem continues until the buffer either fills up or I hit F9 to cause the TNC to tell me it is already disconnected.

I'm using a serial cable with all of the pins connected, if that matters. Any ideas would be appreciated, but as TPK is down, preferably via the Internet.

Can anyone relate their experiences with the NIR-12? I am currently using a Timewave DSP-9+ and want to try and eliminate a very high local noise level. Signals drown in the noise and I understand that the NIR-12 may be able to help.

Comments?

73 de VE7MDL ....Erik.

>
>Then perhaps you should address yourself to learning foreign languages.
>English being a minority language. Surely "voice" would include
>Cantonese for instance. Seems you've got your principles knickers in a
>knot!

English is the international language. Most Europeans know English.
Maybe someday I will learn Cantonese, much more useful than CW.

>It's not so much "whiners" as "whingers" who can't get their own way as
>minority group.

What is a whinger? Not in my webster dictionary.
I got my way, got my general in spite of distate for CW.

Whose the minority group? No Code Techs are growing by leaps and bounds,
while HF Hams are dropping like flies. My guess is the average age
of hams on HF is 70, and rising yearly. No Code Techs will rule all
the airways in a very few short years. CW will be dropped without a doubt.

>If you don't like it then "get out of the kitchen!"

Don't like what? I paid my dues. I earned the right to complain about CW.
I was forced to learn CW if I wanted to get my HF voice priveledges.
I learned it, hate it, don't see a need for it, it shouldn't be a requirement.
And I don't take kindly to old farts who get thrills by needling no-code techs.
If you don't like my opinions ... deal with it.
I'm on HF to stay whether you like it or not.

>Cheers....Mike

>for example (the DX Cluster is also a like use).

>By running in a temporary "wire" system to bypass a broken node until it
>could be fixed, surely there would be no harm done in order that our second
>category of packet user could continue to make use of the network to support
>more conventional activities ?

The "harm done" is that this second category of packet user (which is
more and more becoming the dominant category) is going to think that
packet radio is his solid and reliable source of information, and that
he has a right to use it. He is going to think that it remains in place
by itself, and there is no need to support it.

Then, the ever-smaller group of first-category packet users will only
be there to keep up the network for the second-category guys.

To keep this bad development under control, it is a good thing that
packet systems and links are sometimes down, so that the second-category
users are aware of the "amateur" nature of the operation, and get an
incentive to contribute to maintaining the network.

It is like electricity: nobody cares as long as it is there, but as soon
as there is a power drop, everyone notices how important it is. But
the difference is: amateurs don't pay for "packet radio network service"
yet they blindly assume it is always there.

We've added a directory of Amateur Radio Equipment specification datasheets to the Ham Radio Online web site at:
http://www.accessone.com/~vbook/hronline.htm

This directory is a large list of pointers to detailed specifications for all new Amateur Radio gear being manufactured today. If you are in the market and looking for just the right radio for you, take a look - this will help you narrow down the choices for the radios that meet your requirements.

Ham Radio Online is self-supported (no ads) and just happens to be the coolest, award winning Amateur Radio web site that looks like a magazine. We feature original stories, newsletters from around the world, in depth real-time propagation, auroral and meteor scatter reports, real-time disaster conditions and much more. Stop on by and have a visit. Let us know if you have ideas for other Amateur radio related items that we should add to our web site.

Thanks and 73,
Ed (KF7VY) and Kim (N7VPL) Mitchell

>that will work and soldering looks impossible.....

Well, you can take the easy way out as I did:

Order a pre-made cable from AES with the Kenwood 13 pin connector on one end and a connector for the PK-232 on the other end. Whack off the PK-232 connector (unless you have a PK-232!), connect the wires to one side of a terminal block and your other equipment to the other side of the terminal block. An inelegant but reliable solution.

From: WA6MHA@WB6WFH
Subject: WIRING OF TS-440 ACC-2

USING THE ACC-2 DATA JACK ON THE TS-440/TS-680 FOR DIGITAL & RTTY MODES

The TS-440 ACC-2 jack (13) pin can be used for your TNC hookup with
great success. The advantages are :

1. You can leave your microphone connected at all times
2. You can turn your speaker volume up and down without affecting
the RX level into your TNC.
3. It keeps your whole setup simple and reduces it to one cable.
4. Your Mic gain will now be set at 7 or 8 on its dial. YES!

The pins used on ACC-2 are: (see page 11 of TS-440 manual)
(3) Data output. This is a constant 300mv output that will go to your
TNC audio input lead. Note: This audio level is also the audio output
on the RCA jack used for FSK output. This is where many hook up their
phone patch.

The audio output may be too hot for some TNC units. If so, you
will have to pad down this level with resistors. My KAM wants to see
50mv and it's seeing 300mv. So far so good!

(4) Microphone shield (Ground)

(9) Microphone Mute. When pulled to ground, this pin will mute the
front Mic connector ** AS LONG AS THE PROCESSOR SWITCH IS OFF!**

If the switch is left on, the audio is pumped up too high to mute.
Connect this pin to your PTT wire from your TNC and also connect
the Cathode of a switching diode (1N4148, 1N914, etc). The Anode of the
diode will go to pin (13). (The cathode is the bar)

When pin 9 is pulled low by your PTT wire, the diode will cause
pin 12 to go low enough to put the TS-440 into transmit. This will both
mute the front Mic jack and transmit at the same time. Works great!

If the diode is not used, and the pins are just connected together,
the front Mic jack will mute itself when used. NOT A GOOD IDEA!

(11) This is your transmit audio in, from your TNC.
Setting of the MIC gain on front of radio:

1. The audio level in wants to be 500mv RMS (1.5 vpp or so). For the
KAM remove its jumper inside. This will give you max audio out of the TNC.

2. For the PK-232, turn up the audio output pot until you get 500mv
or so RMS. You may also want to set it to make your TS-440 mic gain pot
read where you want it. (MIC) will run around 7 or 8 for digital with
the KAM. I'm not sure for the PK-232. More level into the TS-440, lower
numbers on the audio pot (MIC)

(12) Ground for audio shield

(13) Standby (transmit). This connects to the Anode (no bar) of the
diode from pin (9). When pin (9) is pulled low, pin (13) will go low.

To sum it all up:

A. You will need:
1 ea diode, 1N914 OR 1N4148
1 ea 13 PIN DIN CONNECTOR
1 ea TNC cable with appropriate connectors

B. Remember to keep the PROCESSOR switch OFF!

C. Set the Mic gain to 7 or 8 and look at the ALC, keep it
in the red, as per the book. Lower power, longer transmit time!

This hookup in being used with three TS-440 radios and is working
great! Go slow and solder carefully. Please recheck your work and
then plug it in! 73 Glen, WA6MHA@WB6WFH

2686. Texas Instr. TMS3220C2 DSP PC card

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-27 00:00:00 UTC
From: shwol@worldonline.nl
Message-ID: <31a9de0d.5289027@news.worldonline.nl>
Source record: 36876

Hello,

I am presently thinking on getting some experience with digital HF communications and was reading some details on the Texas Instruments TMS3220C2 PC card. It seems, that, when used with DSP software ware of KC7WW and HB9JNX, RTTY, Amtor and Pactor can be used.

Does any one have any experience with such a setup? Any kind of information is helpful.

Tks, 73

Coen
PA0COE

Info at Dayton this year was that AEA had not yet negotiated a license for Pactor II. If you read between the lines a little, there MAY be some concern as to whether the PK-232 hardware can support a "full blown" Pactor II implementation or will it require some scaled down software. I'm interested in seeing how this all turns out.

2688. Re: PK-96 & Kenwood TM-451 problems !

>really good rate in transmision.
>The conexions are made by the supoused 9K6 data conector of the transceiver.

This is what you can expect...
The PK-96 is a suboptimal 9600 baud TNC, and the TM-451E is a
suboptimal 9600 baud transceiver. Used together this means disaster.

>Can anyone help me ?

Sell your PK-96 and buy something with a real G3RUH modem, or (better)
sell your TM-451E and buy a good radio, all-mode or crystal controlled.

: >>outdated.

"I want" rather than "I need" or even "I would like to have"

: >Then perhaps you should address yourself to learning foreign languages.
: >English being a minority language. Surely "voice" would include
: >Cantonese for instance. Seems you've got your principles knickers in a
: >knot!
:
: English is the international language. Most Europeans know English.
: Maybe someday I will learn Cantonese, much more useful than CW.

No, English is *ONE* of the international languages and Europe (plus the
USA) do not comprise the world. There are other folks out there.

"Maybe, someday"....or maybe never or maybe......

: >It's not so much "whiners" as "whingers" who can't get their own way as
: >minority group.
:
: What is a whinger? Not in my webster dictionary.
: I got my way, got my general in spite of distate for CW.

Webster's dictionary isn't the single definitive authority on international
colloquial words amd idioms. I'm sure someone on the net, especially from
Oz (Australia), will suitably define it for you. They have a favourite
expression of "Whingeing Poms"

"I got my way"...spoilt brat, eh?

: Whose the minority group? No Code Techs are growing by leaps and bounds,
: while HF Hams are dropping like flies. My guess is the average age
: of hams on HF is 70, and rising yearly. No Code Techs will rule all
: the airways in a very few short years. CW will be dropped without a doubt.

Yep, we're fast approaching the next phase of Darwins theory of evolution with the loss of speech as a communication medium. I notice some of the younger members of my own race already reducing the vocabulary to a series of grunts. It sounds quite digital. Perhaps they're advanced "techies".

Your guess at the average age of HF hams is based on conjecture (bullshit to you...as a "techie" expression) rather than fact. I am, however open minded to any facts you can provide to corroborate your (apparently) wild guess.

At the first EMP during the next global fracas, there 'aint gonna be any "no-code" communication then it'll be back to hill top beacon fires and Aldis Lamps...the second coming of Samuel Morse's code plus the return of Semaphore.

: >If you don't like it then "get out of the kitchen!"

: Don't like what? I paid my dues. I earned the right to complain about CW.
: I was forced to learn CW if I wanted to get my HF voice priveledges.
: I learned it, hate it, don't see a need for it, it shouldn't be a
: requirement.

I have no quarrel with your freely expressed point of view and the right to complain about the conditions required to obtain a licence but I will always take exception to any aggressive anarchic activity to achieve minority objectives......or do you find the principle of democracy distasteful?

: And I don't take kindly to old farts who get thrills by needling no-code
: techs. If you don't like my opinions ... deal with it.
: I'm on HF to stay whether you like it or not.

If I need thrills, I'd hardly be looking to the Internet or ham radio as a source.....not unless I was content to set really low expectations.

As to your opinions, well all I hear an resentful young anarchist, wet behind the ears, with the ink on his licence hardly dry, trying to bulldoze his immature beliefs on others without constructive debate. I know cos I did it myself in the dim and distant past. That doesn't justify it as a principle however.

Thus your opinions are not worth dealing with in terms of their comparative importance to other day by day situations which attract my undivided attention and if that needles you....well, tough, that's life, it can be a bitch!

And by all means stay on HF and anywhere else you're entitled to be. I haven't even given thought to whether I should like it or not. In fact, I'm rather underwhelmed by your vociferous resentments.

Meanwhile, I'm quite content to be "an old fart", it's quite a peaceful period in one's life. It is a pleasant enough scenic journey on the river of life.....until I eventually get to that waterfall! You might even get to enjoy it yourself one day.....give or take continuing good physical and mental health, control of the misuse of "techie" annihilation weapons by the self diagnosed aggrieved and a return to a state of placid co-existence away from "(something or other) rage" otherwise we may all go over the waterfall.....together!

Do have a nice HF, CW free day, whatever!

Cheers....Mike

2691. Pescador Version 1.0 (Beta)

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-28 00:00:00 UTC
From: colla@vnet.ibm.com
Message-ID: <4ofv7p$11gm@bocanews.bocaraton.ibm.com>
Source record: 36748

Hi,

Introducing Pescador Version 1.0 (Beta) to be available anytime soon
at ftp.funet.fi, at least posted today there.

Pescador allows a station to get a forward just out of the monitoring of
a channel where a regular BBS forward takes place, no active role is
played by the monitoring station and no special setup is required at
the forwarding nodes either.

The captured mail is left as an ASCII import file to be feed into almost
any BBS, could easily be configured for a complete automated execution.

Both non-compressed W0RLI and compressed F6FBB forward formats are
supported.

Capture efficiency may vary depending on several factors but ranges
between 30 and 70% of the total forward session.

Requires the G8BPQ packet switch and some decent multitasker, runs along
with your own BBS or PMS (assuming you have one) reducing the forwarding
burden to your link.

I hope you guys found it useful, please direct comments and suggestions
to colla@pec.pccp.com.ar.

Best Regards
Pedro E. Colla (LU1BUV)
colla@pec.pccp.com.ar

Oh Charles, you couldn't be more wrong. The freshman mathematics
we're teaching today at universities and colleges was high school
math decades ago. Today's freshmen know nothing of the classics,
have difficulty formulating their thoughts into written form, have
a very limited vocabulary, have little or no skill in arguing their
beliefs, are extremely weak in geography, are ignorant in world and
national history and in current events...
It's very depressing. I fear for our country's future.

Hello Pierre,
Nice to make your accaintance. I too am an avionics technician; however, I work for the US Air Force, not an airline. I have experience in the F-4, F-5, A-10, T-38, EC-130, MC-130, and B-1B. I specialized in Comm, Nav, and electronic warfare, but also worked some instrumentation. Currently, I'm teaching professional military education to senior enlisted airmen.

I live in Montgomery, Alabama but soon will be moving to the north eastern US.

That's my story Pierre.

And what use would that be? I was in Hong Kong a few years ago with a fella that was fairly fluent in one dialect or another (at this moment, I don't recall if it was Cantonese or Mandarin - but for the story, let's say he knew Madarin). Well, for all his years of study it didn't do him much good when looking for the famous floating restuarants in Hong Kong harbor. All the folks in that neck of the woods spoke Cantonese & didn't understand what the heck he was talking about. But, as far as HAM radio is concerned, I'm sure you'll find more people to chat with using CW then with Cantonese (or Madarin for that matter).

Are you being serious here? You mean that you couldn't figure out he meant whiner vice whinger? A simple typo, don't be so critical.

> Whose the minority group? No Code Techs are growing by leaps and bounds,
> while HF Hams are dropping like flies. My guess is the average age
> of hams on HF is 70, and rising yearly. No Code Techs will rule all
> the airways in a very few short years. CW will be dropped without a doubt.

That would be a great trick. With all the new, supposedly young, hams joining the ranks in "leaps and bounds" how could the average age rise yearly? I'm sure that if no new hams were to join the ranks for one full year, the average age of all the hams (US only?) COULD rise, but I'd be willing to counter guess and say that a good lot of old guys would go SK and a bunch more would simply have their tickets expire and thus quite possibly LOWER the average age. That's my uneducated guess if and only IF no new hams joined up. But, for each one of them leaping and bounding new hams that joins up (and for each one of those crusty old CW freaks that leaves the ham ranks) the average age will likely fall.

> Don't like what? I paid my dues. I earned the right to complain about CW.
> I was forced to learn CW if I wanted to get my HF voice priveledges.
^^^^^^

This is a comon complaint, being "forced" to learn CW. Since you're a fan of Webster's perhaps you could look up the definition of forced. When were you "compelled by force" to learn CW? I'm sure that you had to "force" yourself (done

or produced with effort, exertion...) to learn CW but NO ONE "forced" you to do so. Perhaps you meant required? Here again, you didn't earn the right to complain, you were born with that constitutional right to do so.

> I learned it, hate it, don't see a need for it, it shouldn't be a requirement.
> And I don't take kindly to old farts who get thrills by needling no-code techs.
> If you don't like my opinions ... deal with it.
> I'm on HF to stay whether you like it or not.

I don't know so much that its all "old farts" getting thrills as much as its people who took the time and made the effort to learn CW in order to recieve their HF privledges. I'm definately NOT an old fart being just 30 and I've always been an avid CW operator. Since I stay out of the phones bands (for the most part) I don't really care who uses them. I do recall how hectic the 10M band was back around 1990 (when the band was in much better condition), you could hardly find clear frequencies on slow days. If all the codeless folks could be on HF tomorrow & the bands were open for DX, you'd never find a clear frequency. Yuck.

> >Cheers....Mike
>
> 73 KB0WOB (just got general call letters/liscense in the mail yesterday)

73 KC6NMD Andy

PS I hope you enjoy your new, increased HF privledges.

I have used this driver and have observed the problem to which Ignacio refers. With Trumpet, retries are so frequent, I am unable to pop more that one short message. I now use Win95 but haven't tried ETHRAX25 again. I'd like to know if anyone has any experience with that.

Hi Greg and Steve,

In Pittsburg KS the 6 meter node is on 50.61 and is a crystal controled
GE Mastr Exec II running about 80 watts to a vertical Ringo antenna at
about 180 ft. Been on the air about 5 years.
It is running TheNet X-1J4 so it handles both NetROM and
TCP/IP. The node call is N5SD-6 and the alias is KS6. The TCP/IP address
is 44.122.5.5 and connects into the local system via UHF TheNet links.
As it is crystal controled, there is no plans for changing and it was
coordinated to this frequency. When the band is open, it has connected
to NAVY6 node at Annapolis MD and allowed connects down the east coast on
the systems there.
Right now it is down with a bad TNC but should be back
on in the comming week.
We would welcome TCP/IP stations to the 50.61. That is,

assuming that it is NOT for BBS forwarding thru this area.

There is also N0RLR-2 running a multi-tnc JNOS station-node at Burlington KS.

See my home page for packet maps of this area.

Before we started ours here, there were two sta's that used the freq for a backbone. We played around on another freq with PacTOR and some other modes for a while. Then decided to go to TCP/IP. The backbone dissolved and we moved to that freq. We've also got 2m, 9600-2m, 9600-UHF, but there's only three of us on 6m here. Thru several gateways I have Inet access, but rarely use it since I have an ISP. If you can get someone else on and setup a gateway to your regular amprnet(s) there, you'll have a nice quiet freq with decent range and plenty of usefulness.

As much as old folks like to think the world will fall apart without
them, youngsters today are in better health, better educated than your
generation. If you are 70 (my guess) the average height a kid today

is 1-2 inches more than in your day. All levels of education have
risen in the last few years, due to fact kids know they can't go without it.

>Your guess at the average age of HF hams is based on conjecture
>(bullshit to you...as a "techie" expression) rather than fact. I am,

That died out with the cold war. There may be a nuclear war someday, but not
a global nuclear war. The chances CW will ever be of use again are
slim to none.

>: >If you don't like it then "get out of the kitchen!"

Thats exactly what is happening now. The CW coders are rapidly
falling into a minority, then CW won't be a requirement anymore.
Will you whine when you are a minority?

>: And I don't take kindly to old farts who get thrills by needling no-code
>: techs. If you don't like my opinions ... deal with it.
>: I'm on HF to stay whether you like it or not.
>
>If I need thrills, I'd hardly be looking to the Internet or ham radio as a
>source.....not unless I was content to set really low expectations.

Well you have made two references to "techies" in this post alone,
obviously a swipe at no-coders.

>As to your opinions, well all I hear an resentful young anarchist,
>wet behind the ears, with the ink on his licence hardly dry, trying to
>bulldoze his immature beliefs on others without constructive debate. I know
>cos I did it myself in the dim and distant past. That doesn't justify it
>as a principle however.

The debate will be how to replace CW with learning material that
is more useful and up to date. Thats my belief and something
CW coders really don't want to talk about/debate.

>Thus your opinions are not worth dealing with in terms of their comparative
>importance to other day by day situations which attract my undivided
>attention and if that needles you....well, tough, that's life, it can be a
>bitch!

You can't needle me now, I got my liscense.
I just hope that the no-coders out there who read the extremely
negative drivel the CW coders post here don't drive them from the hobby.

From: rlubash@poco.mv.com
Message-ID: <Ds4qxv.BD6@mv.mv.com>
Source record: 36892

I am relativly new to digital (3 weeks) and have been using an older PK-232MBX for RTTY I have tried a friends tnc for pactor and would like to use that mode also.

I have the option of upgrading the firmware on the PK232MBX and getting pactor software or selling it and getting a DSP-232 that comes with software. I would like to know if anyone has had experience with the DSP-232 on RTTY and if it works noticably better on poor signals, QRM and other adverse band conditions. I don't mind spending the extra money but would want it to be an improvement over my old PK-232.

Thanks in advance

Richard N1VXW

Might also put this code argument a little more into focus, and shed some
daylight on the relative importance of amateur radio licensing in the grand
scheme of things.

Though in the scenario you describe, in which survivors would
be struggling to find food and shelter, I expect there would still be
a ham sitting at a radio somewhere, worrying about whether the other
fellow knows his code and has worked hard enough to share the airwaves
with him.

Heehee - it's interesting that he didn't comment about the core of
my rebuttal to him: To compare the military to the amateur service
is utterly ridiculous - they have billions of dollars to create
a virtually impenetrable communication system immune to practically
anything. Their mission is 180 degrees from ours. To compare our use
of CW to military comms is an apples to pineapples item.

2716. MFJ 1274 has spur at ~145 MHz

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-29 00:00:00 UTC
From: Eric Rehm <rehm@zso.dec.com>
Message-ID: <01bb4d20.4b154d00$28104010@rehm.zso.dec.com>
Source record: 36757

I just bought a used MFJ 1274 to "get acquainted" with packet.

It turns out the MFG 1274 has a spur at ~145 MHz that opens the squelch on my HTX202 and adds noise to the passband when I'm tuned to the local packet BBS @ 145.01.

I've verified the spur with a spectrum analyzer and all the other stuff (PC, HTX202) turned off. The spur appears only when the MFJ 1274 is turned on. There are other spurs, too. I didn't take the time to look at the spacing, etc. to try to guess at what the fundamental might be.

However, I hoped that someone else might have seen this. Is there a quick fix? Or is the MFJ 1274 a boat anchor?

If you're using Netscape, why not set it so it only loads graphics
on demand? That's easier than trying to convince Web page authors
to change their designs.

Eric... if its like the old 1270's you can tweak on the cpu xtal... a
trim cap there someplace and get rid of that spur... Its been so long
since I used a MFJ, I've forgotten the exact details.

: To keep this bad development under control, it is a good thing that
: packet systems and links are sometimes down, so that the second-category
: users are aware of the "amateur" nature of the operation, and get an
: incentive to contribute to maintaining the network.

I have a friend who runs a small hub and if his kit is sick he gets
telephone calls complaining that it is off.

Before you ask, I don't mean informative calls saying do you realise it's
off, but really stroppy people upset about the loss of service.

The kit he uses is all his own and he gets no funding from external
sources such as a club. It's all off his own bat. Last time he was so fed
up he nearly didn't bother to get it going again.

So I agree with the above point that second-category users ought to made
more aware of the 'amateur' nature of the whole packet radio system.

I've used the ethrax25 stuff - its OK but I prefer to use a old XT or similar with a PLIP (parallel link packet driver) or ethernet connection and running one of the NOS (eg. JNOS) proggies. That way you get full AX25 functionality as well as easier to set up routing etc. If the NOS is the full 'hub' version with all the servers it can also collect all the nntp for you that is then read using your Windoze engine and it can provide WWW servers for your local system as well as everyone else. (better still would be a reasonable 286 or 386 and run it with a Baycom board with the AX25 packet driver - much cheaper!!).

Several people around South Bucks and East Berks are now running with this setup and it works well with Netscape, WinWeb, Cello etc in Windoze and Minuet and Lynx in DOS (at the last count there were 6 servers and 8 'users').

All I would suggest with anyone using more sophisticated mailers etc is that they ensure what they put out onto the network is mainly compatible with everyone else - ie. don't get too carried away with Mime and strange character sets!!

NEW ENGLAND DIVISION DIRECTOR NEW ENGLAND DIVISION VICE DIRECTOR
Bill Burden WB1BRE Warren Rothberg WB1HBB
wb1bre@arrl.org wb1hbb@arrl.org

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ
(THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for
July QST in this bulletin. ARRL, as the principal representative of
Amateur Radio in Washington, is actively pursuing this issue as this
bulletin is being written. Dave's call to action is serious!! We could
lose these bands if we do not take action now!!
Club presidents and newsletter editors: please make this
information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.
In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee,on C. Ladson, the alternate federal officer."
Hold that thought while we shift gears to the substance of the issue.
One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile- satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.
At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.
Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.

Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.

Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.

Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit its WRC-97

home page at: http://www.fcc.gov/ib/wrc97/.

General "hash" is typical of many digital devices. However...

> I've verified the spur with a spectrum analyzer and all the other stuff

...if "spur" as you call it, means carrier, that is a known problem of the MFJ, and I suspect any of the TAPR clones. You may move the carrier by moving the oscillator trimmer slightly to shift it to an unused frequency. The percentage change in clock speed is only minor, and can get the carrier to some place it won't do harm. I have always set the frequency of the clock with a counter. So far, that has never put the carrier on a frequency that is used in my area. It has the added advantage of keeping the real time clock in the tnc pretty darned accurate, for those who care.

You didn't say, but one might get the idea you were trying to use the 202 with the rubber duck antenna. This is not a good idea. For one, transmitted RF can lock up the tnc and possibly even the computer, if it happened to get into the keyboard line. Second, the digital hash generated by the computer, the keyboard, the monitor, all interfere with incoming signals on the radio. Always use an outside antenna, or at least one that is well removed from the computer/tnc area.

I haven't gotten into grounding. The usual things can be tried for each of the problems. However, I've found that each case is separate. What works for me won't necessarily work for you.

> Or is the MFJ 1274 a boat anchor?

Not at all. The 1270/1274 is the basis for most networks in the country.

Heard about the subject on NPR a while back. A Brit is Africa (or in the UK?) invented a radio powered by internal generator, which in turn is spun by a flywheel the operator cranks up. I'm in Florida, hurricane season is starting, and I want to be able to keep in touch. thanx in advance.

2734. Our VHF/UHF Frequencies at risk again!

Dear Fellow Amateur Radio Operator:

I have just received the following advanced copy of the July 1996 QST editorial written by K1ZZ from Tod Olson, K0TO, and it focuses on an issue near and dear to many of us - specifically, the potential loss or sharing of our VHF and UHF frequencies with commercial services.

Please do three things TODAY -
1. Read the editorial.
2. Write letters to those listed in the editorial. Be rational and not emotional. Tell them sharing is not in the public interest.
3. Pass the editorial on to as many other concerned folks as you can.

Experience shows that what works best is MANY, MANY filled mail bags to governement officals. Post cards work well too - but the objective is to get a large volume of mail to these folks real quick and make sure they shift
their interests to someone elses frequencies and not OURS!

By your help ... and letter writing right now, we can help protect our frequencies and make sure we have the capabilities in the future to continue
to serve the public good! Write TODAY!

73, Carl Estey WA0CQG

==========Beginning of editorial==========

Write Now!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."

Here's what's happening, and what you can do about it. The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry.
In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.

For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of

State
Steering Committee of the Advisory Committee. There, draft proposals as
received from the IWGs will be reviewed and forwarded to the FCC for
possible
release as preliminary U.S. proposals for public comment.

In announcing the streamlined WRC preparatory process, the FCC tried
to reassure those who might be concerned about reduced opportunities for
public participation: "Interested parties should note that input to the
Advisory Committee may be sent at any time directly to the Chair of the
WRC-97 Advisory Committee; the Chairs of the Advisory Committee's
Informal
Working Groups; Cecily C. Holiday, the FCC's federal officer of the
WRC-97
Advisory Committee, or to Damon C. Ladson, the alternate federal
officer."

Hold that thought while we shift gears to the substance of the
issue.

One of the WRC-97 agenda items includes consideration of possible
additional frequency allocations for the mobile-satellite service.
So-called
"little LEOs," low-earth orbit satellites below 1 GHz, already have
allocations. Their proponents claim these are inadequate and are trying
for
more. The needs of little LEOs are being addressed in IWG-2A, chaired by
Warren Richards of the Department of State. The ARRL technical relations
staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative proposed a
list
of "candidate bands" for little LEOs. The list includes a number of bands
that would negatively impact existing services, and does not include
others
that would be technically more feasible but to which strong objection
from
incumbents could be expected -- the point being that some political,
rather
than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This
is
the first time in memory that another service has been proposed for the
two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is
made of these bands by amateurs. The two bands provide the backbone of
our
local public service communications effort. Voice and data, mobile and
fixed, even television -- the list of present amateur uses is a long one,
and of future uses is even longer. Both are already used for satellite

services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and in a followup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background inradiocommunication could possibly believe that a mobile-satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144-148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.

Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.

Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.

Leslie Taylor, President, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are
simply doing their jobs. We have to get across that casting
covetous eyes on amateur bands is counterproductive, and
contrary to the public interest. To accomplish this we
need a lot of comments, including yours. But remember that
the objective is to educate and persuade, not to intimidate. We
don't need to. The facts are on our side.

To monitor the FCC's ongoing WRC-97 preparations, visit
its WRC-97 home page at: http://www.fcc.gov/ib/wrc97/.

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ
(THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for July QST in this bulletin. ARRL, as the principal representative of Amateur Radio in Washington, is actively pursuing this issue as this bulletin is being written. Dave's call to action is serious!! We could lose these bands if we do not take action now!!
Club presidents and newsletter editors: please make this information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.
In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee,on C. Ladson, the alternate federal officer."
Hold that thought while we shift gears to the substance of the issue.
One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile- satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.
At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of

bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

The BSX TNC (a TNC2 clone) has a trimmer for slight adjustment of the
CPU clock frequency to avoid this sort of problem. Perhaps the MFJ has
one, or, you could fit one.

Jeff,
I would like to know what parameter, or command will activate the JNOS receive path. I have JNOS operating at 2meters, in transmit mode.
Any info also in routing. In New Zealand we are 44.147.0.0 as network address. I'm having trouble getting routing set up for all functions.
I have had PIng work, and lookup will view an entry, but when station is called I get smtp "Unknown route." Are you able to advise. 73 Winton.

> hear from you....

Basically I like mine and would recommend one to anyone looking for such. The unit is supposed to be shipping with the Windows version of PacRatt now. Mine came with a coupon. I sent it in today telling them I wanted the Macintosh version of whatever as there is not going to be a Windows PC in my shack.

I called in a firmware bug or two. One they knew about the other they didn't. Turned up another last week thats far more serious as it leaves the radio keyed. Haven't investigated further into what caused it but it has something to do with use of hardware handshaking on the serial port. If my computer doesn't handshake then no problem. DSP-232 gets confused if hardware handshaking is enabled.

Another bug is trying to use 9600 baud in KISS. It can Tx but not Rx.

The other was 1) set the 9600 modem, 2) your serial port at 9600, 3) enable the raw A/D data output from the modem. Obviously you will have more data trying to go down your serial connection than you have bandwidth for. Quickly the DSP-232 overflows its buffers and resets itself. Ad infinitum.

The advertisement pictures an MC68340 and a BGM connector, which it really has! The 68340 is a 16 MHz Motorola 68000, capable of running on a 16 bit data bus. Looks like the SRAM is 8 bits, the EPROM may be 8 bits or 16, there are 2 EPROMS but only one SRAM. With the availability of free development tools for the 68000 plus the onboard BGM port for debugging I expect the DSP-232 to become the future packet hackers' standard platform. Or some variation thereof.

> somebody can help me out?

Assuming it is the same as the TASCO TNC-20, which I have used, it has
the standard TAPR 5-pin TNC configuration:

1. TX audio
2. Ground
3. PTT
4. RX Audio
5. External DCD [normally not used]

Some of the TASCO TNCs have additional pins, but they are still
compatible with the 5-pin DIN plugs.

Hello.

I am Igor. I live in Daugavpils, Latvia. Latvia is a small country
near Baltic sea (east Europe).
The digital radio communicatios are new for us. I have two problems
using digital radio links.

1. There are two establishments on distance approx. 1 km. In each
establishment working local network (Ethernet). How to connect
its using radio link? What max. baud rates I can get on 430MHz,
1240MHz ? What modems designed for that and what prices ?
What radio stations need for this targets (standart or special)?

2. How to made multiuser Internet access via radio. Not need high
speeds for that. I think about 9600 bps. What hard- and software
you can recommend ?

I am a novice in this things. I shall be glad to get any information.
By the way, if you a radio equipment dealer (better in Europe),
please write your prices...

Thank you.

73!

: >to talk TCP/IP to a TNC?
: Me Too! Me Too! Me Too! Win 95 would be even better.
: kk5tj@myriad.net

Yes, well, I think the problem with the packet driver solution is that the frames are going in UI frames. This leaves the timeout and retries to TCP meaning that they come thick and fast. If the packet driver were to support a connection oriented (I frames) then TCP would be told to hold on. BUT it might be a little difficult to pretend an ethercard has a connected mode ! SO, I am working on an NDIS 3.0 driver which shoud run on NT,95&WFW. This utilises the WAN service functions and poses to be an X.25 driver. With a bit more luck it'll be ready for Christmas ! No, seriously, time is a problem at the mo, so just keep patient and it'll be here soon. Mail me if you want to be an alpha tester, also if anyone else has tried this or knows anything about NDIS 3.0 the mail me cos it is quite heavy going.

2745. rs232 protocols

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-30 00:00:00 UTC
From: jim <jim.parnell@nzart.org.nz>
Message-ID: <31AD57A4.C69@nzart.org.nz>
Source record: 36786

Greetings to all.

Can anyone help me please?

I am looking for a document that I can download which will give me the sequence of voltage changes (high to low and vice versa) on each of the lines used in a full RS232 interface (RTS, DSR, DTR, CD, DCD etc) from the time a request for a connection is made to when a connection is concluded. Also, whether the protocol depends on voltage levels or the timing of the level changes.

There are plenty of references which will tell me what the pins on a D connector are used for, but I have not been able, from the resources available to me, been able to find out when the various lines are high or low during a data transfer session using the RS232 protocol.

Can anyone guide me to a file containing the information I need that I can download?

Please reply to me at jim.parnell@nzart.org.nz

Many thanks.

Jim Parnell, ZL2APE

I hope you find it.

Once you find the RS-232 protocols then the quest is to
find someone who then follows the standard.
"Thank goodness for data buffers or the high and low of
the handshake lines would never work."

Most don't seem to even follow the voltage standard for RS-232.

You might want to see a IC data sheet for a UART.

2748. 6 Meter TOR operations

It is the same over here... when you operate a node and put a small
info message in it that suggests to make a contribution to pay for
maintenance, electricity etc you get almost zero response. But when the
thing is down the phone doesn't stop ringing...

Why don't you put more powerful software on your hubs that allows full
strength Internet servers cf sendmail, inn, bind, etc. Also you'd get a
fully working DNS. Running xNOS on your server is akin to running just DOS
on a Pentium ... a sad waste.

>All I would suggest with anyone using more sophisticated mailers etc is

I think the contrary is true. If people run sub-standard software that
cannot handle all the variety of data formats that the true Internet can,
they should be shown the error of their ways. Amateur TCP/IP should not be
an excuse for running *amateurish* software.

The question here is NOT what system a hub uses but what an end-user,
probably with a radio-rally XT-special is using with a PK88 tied on the
end. This 'user' also has a reasonable PC that his kids use for playing
games & for their homework so he's not about to trash it in a 12 month
exercise in learning how to install Linux and then find that most of the
software - although available - is not sold from his local Computer
World warehouse.

Sub-standard? hmmmm. I think that for the short to medium term we MUST
cater for the lowest common denominator otherwise we will loose our
userbase. I think its stupid and short sighted to expect everyone to run
'true Internet' software which in the main requires a minimum of a 386
PC. I agree we should be stretching ourselves but lets not leave 90% of
the users of the network behind.

I say again - provide all the extra facilities but maintain compatibility
with what is already out there.

2756. Any good FM mobile radios for 9600 packet?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-30 00:00:00 UTC
From: tgeyer@rain.org
Message-ID: <4ol74c$esp@news.rain.org>
Source record: 36797

I've been watching this group for awhile now, and haven't seen much traffic regarding my question. I'd like to purchase a VHF/UHF mobile radio and use it in my house for table chit chat and packet as well. I am a relatively new ham.

I see that Kenwood and Allinco both advertise some of their mobile radios as packet ready. Specifically, Kenwood says "1200/9600 packet ready" while Allinco uses the phrase "9600 packet compatible." I'd like to know from this group what these phrases mean.

I don't have big bucks to spend on a rack of radios. I'd like to work voice and packet yet not be stuck at 1200 baud.

Does anyone know of a good radio that will satisfy my needs? Specifics are preferred.

Also, on a side note, I see that Azden offers a voice (440MHz) radio that is also 9600 packet capable. What would I be giving up by not having a 2M radio? Are the number of 440MHz repeaters that much fewer than 2M that I would be severely limited?

Thanks for any help!!!!!
Tom

Metricom. They make a hayes compatible modem that will
run at 100 KB and operates in the 902-928 MHz Spread-spectrum
band. I would think that a modem at each location will work over
a 1 KM distance okay..

Please let me know if you would like metricom's address and I
can e-mail it to you, I am at work at the moment and don't have
it handy..

I support this change. Amateurs have turned out to be non-progressive in the VHF, UHF and Microwave. They trash up the bands with modulation methods from the 30's. Any attempt to use modern modulation schemes is thwarted by the political action committee (PAC) called the ARRL. I say it's high time we end this nonsense and commercialize the bands for the good of the USA, and the World.

From: WWW-Computer <Postmaster@infocom.dk>
Message-ID: <31AD63F7.5BCD@infocom.dk>
Source record: 36802

I am building a scanner (on low budget) and for
that I need a oscillator. By software I must be
able to choose between a number of different
frequences starting at 100MHz, 200MHz, 300MHz....
Ten different oscillators is a possibility but too
expensive. I have thought of something with a
cap.diode.
Maybe some of you has a good construction or some
good ideas.

Thanx.

Announcing: EzPacket Version 2.20 for PMP/BayCom

From: Bill-WB9BBC

I just received this post from Frank Domina, N9MXI, the author of the
EzPacket program for the PMP/BayCom modems. He can NOT be reached via
e-mail, so I am posting this note for him (read below). If you wish to
reply to him, it would be best to respond to THIS NEWSGROUP THREAD!

Frank has attached his NEW EzPacket Version 2.20 program to his note
(size=71Kbytes). Frank's release notes appear below. I will be happy
to distribute this program via E-MAIL for him if you would:

o Send E-MAIL via INTERNET to ME (WB9BBC): wmkresl@townsquare.net
(Or, via PACKET RADIO: WB9BBC @KD9JK.WI.USA.NOAM).

o Make the SUBJECT line of the e-mail: EZPACKET
(so I can sort thru the mess).

o No text body necessary, but if you wish you can include
your name/call/QTH. Make sure YOUR internet E-MAIL address
is CORRECT (I hate bounced back mail).

o I will send out programs on FIFO (first-in-first-out) basis, so
be patient if I don't get right back to you.

o The Program will be sent as a ZIP attachment (MIME), no decode
necessary. Just know where this ZIP program will go on YOUR system!
(I CAN NOT send the file as Packet RADIO mail, but I may send out
as a 7+ encoded file at a later date).

I haven't tried out this program yet, my BayCom modem is not hooked up.
If you have any comments, problems or bug-reports then please pass them
along thru the newsgroups. Cheerio!

Wm Kresl

Hello. If you wouldn't mind putting the following out on a newsgroup, that
would be great. (For some reason, I cannot get news postings through our
firewall at work)

IF YOU DON'T MIND, PLEASE POST THIS to the "rec.radio.amateur.homebrew" and
"rec.radio.amateur.packet" news groups:

EzPacket is FREE DOS-based software and is for use with PMP and Baycom modems
and has multiple windows/connections support. It can be downloaded from from
the Precision BBS at (847) 985-9544. The name of the file will be EZPKT???.ZIP
where ??? is the version. The latest version is EZPKT220.ZIP. A User's Manual
is available from the author for a very minimal fee, however there is also
decent on-line help. Version 1.7 was widely distrubuted and there have been
recent updates since then as described below from the readme.txt that is
included with the software:

Version 1.8.x beta releases:
- Fixed BUG that did not display the session number correctly
when prompting for the session's upload file name.
- Removed prompt when FORCING an in-progress disconnect.
- Added display of found LPT and COM ports when editing config.
- Remembers and uses the last video mode (25 vs 43/50 line mode)
unless told otherwise on the command line (run EzPacket /?
for help)
- Updated the ALT-A "about" screen again
- Fixed bug that could cause nodes or stations heard lists to
become corrupted after clearing the lists.
- Added monitoring station include/exclude filters. The list is
"H" in the ALT-O options, and it is enabled for each window
under "D" then "window number" in the ALT-O options.
- Added clearing scrollback buffers (see ALT-H help for key)
- Added TAB/BackTAB to switch windows
- Added ability to take action on key pressed when exiting
Help Screen
- Fixed failure to write scrollback buffer or current window
(ALT-F & ALT-W) I think this bug was only in previous beta
releases.

Version 2.0:
- Added optional message types to filter when monitoring
- No longer tries to display data from unknown packet
tranport formats
- Added more config options for sound [(1) off, (2) on,
(3)only within text (typed or received), and (4) only from
user interface.)
- Most control chars are now changed to printable chars in the
scrollback buffer (i.e. CTRL-A displays as ^A, etc.):
+ Tabs still get translated to the appropriate number
of spaces.
+ Backspace now overwrites the previous character on the
same line.
+ Other printer control characters such as <VT>, <CR>,
<LF> and <FF> are NOT translated to printable
characters.
+ Bell chars beep (if enabled in configuration) when
FIRST "displayed" AND are STRIPPED from scrollback
buffer so quiet when scrolling.
- When typing in data, BELL chars (CTRL-G) display as " ",

TAB chars (CTRL-I) display as " ", and all other control
chars will DISPLAY as the character representing the typed
char + hex 80, BUT the true typed characters will actually
be taken as the input. For example CTRL-A, which is hex 01,
will be DISPLAYED as the character that is hex 81, which
happens to be "", but the typed CTRL-A will be taken as the
input. This is to simplify the user input line and make
normally undisplayable characters visible when typing.

```
Version 2.1:
- Fixed bug that cause lock-up if trying to display a control
character (i.e. ^D) when there was only room for 1 character.
- Removed redundant line in remote commands help screen.
- Added new ZOOM option (ALT-F10) to toggle session display
between windowed and full-screen.
- Added new /D[a] DEBUG option (run EzPacket /? for usage)
that dumps all received data in its raw form to a binary
file (ezpacket.dbg). The format of the variable-length
records in the file are as follows:
<2-ByteNumberOfDataBytes><DataBytes><0x7E><0x7E><0x7E>
The three 7E bytes are added for easier visual inspection
when viewed with a binary file viewer.
NOTE: This mode opens/writes/closes the debug file with
every received packet, therefore performance may
be degraded on slower computers with slower disks

Regards,

Frank Domina, N9MXI

From: joe haas <joeh@rollanet.org>
Message-ID: <4oljmr$e2p@gamma.rollanet.org>
Source record: 36806

In article <31AD57A4.C69@nzart.org.nz> jim, jim.parnell@nzart.org.nz writes:
>I am looking for a document that I can download which will give me the >sequence of voltage changes (high to low and vice versa) on each of the >lines used in a full RS232 interface (RTS, DSR, DTR, CD, DCD etc) from >the time a request for a connection is made to when a connection is >concluded. Also, whether the protocol depends on voltage levels or the >timing of the level changes.

The RS232 spec is available from the Electronic Industries Association:

http://www.eia.org/

HOWEVER: This document is SOLD, not read, so you won't find it at the web site, the best you can hope for is a phone number (have your credit card ready folks...). the cost is $20 or $30. I have a copy buried somewhere in the garrage...

The problem with the spec (and it admits this in boldface) is that it is a voltage spec only. The information transferred is not defined...if you wanted to use RS-232 as teh control spec for your house lights, thats just fine (stupid, but fine anyway). As one of the other comments indicated, what these signals do depends largely upon what the DB-25 is connected to. For that, you are best directed to the equipment specs (or better yet, the data sheet(s) for the components that handle the serial data...ie, UART or DUART or ACIA).

Generally speaking, I've done most of my serial hookups using TD, RD, and ground. Occasionally, I deal with RTS/CTS, but that is rare. Of course, as previously mentioned, this is heavily dependent on what you are talking/listening to.

2766. MFJ 1274 has spur at ~145 MHz

> the spacing, etc. to try to guess at what the fundamental might be.

You should be able to move the spur away from 145.01MHz by
adjusting the MFJ 1274's crystal oscillator frequency. There's a
variable capacitor near the middle of the printed circuit board,
probably labeled 'C47'. Tune this to move the spur. Don't worry
about affecting the TNC's operation, the trimmer is just for this
and can't move the frequency enough to cause a timing problem.
It's not unique to the MFJ, other TNC's that use a 4.9152MHz
clock do it, too.

PS: The spur is 29.5 times the 4.9152MHz crystal frequency. The
other spurs you're seeing are also related. Tuning the trimmer
moves them all.

HELLO TO ALL;
If you have gotten this far with all the threads regarding CW, I am going
to present a differant view point.
A while ago I had throat surgery. Conversation (talking) was not possible,
for a number of days. During those days I had many hours of enjoyment
with CW and was able to " talk " to my hearts content. No one is
guaranted tomorrow. You never know what is around the corner in your life.
My ability to " talk " CW was a saving grace during my post operative days.
73's to all;
Bob WA2EAW

2772. BayCom Video Problem

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-05-31 00:00:00 UTC
From: Jim Mitrenga <cjm009@email.comm.mot.com>
Message-ID: <4on4ir$64a@brokaw.comm.mot.com>
Source record: 36813

I'm running BayCom 1.50a and I have a problem with the displayed screen. After the "warning" screen is removed upon initial program startup, EVERY OTHER LETTER remains on the screen. If the letters are erased by backspacing or deleting, new printing from packets received or typed in will be displayed properly and are scrolled upward off the screen in the usual manner. If you try to scroll the screen back, EVERY OTHER LETTER of the scrolled text remains on the screen and obliterates new text.

WHAT THE HECK IS THIS? I've corresponded with the BayCom design team in Bavaria and they say they've never seen anything like I've described. I questioned whether an ATI UltraGraphics video card with 1M video ram could be causing the problem and they say they have a number of associates with the same video card but NOT experiencing the problem. WHAT GIVES? CAN YOU HELP?

Additional information: Running a Gateway 2000 486 DX2V33 computer

>while Allinco uses the phrase "9600 packet compatible." I'd like to know
>from this group what these phrases mean.

It means "sorry we don't have any 9600 baud capable radio's but we
still want to sell you what we have, so we included this tagline".

Seriously, I recommend you to read some independent reviews about
performance with 9600 baud (mainly transmission) before you believe
what the ads say.
Recently an article appeared in QST explaining a new measurement done
when reviewing transceivers, including a test of the above offerings.
The results were not pleasing (for the manufacturers).

You can undoubtedly find someone at your local radio club who has
some QST back-issues and lets you read or copy the articles.

What:
HAMFEST - COMPUTER SHOW - ELECTRONICS FLEA MARKET

When:
June 16, 1996

Time:
8AM - 1PM

Where:
Nordonia High School, Macedonia, Ohio (Just south of Cleveland)

Join the Cuyahoga Amateur Radio Society at its 5th annual Hamfest!

This years Grand Prize:
- An Icom 2350H Dual Band Mobile!

And don't miss out on these door prizes:
- An Icom 2GXAT 2m Handheld!
- A 28.8K External Modem!
- A Handheld Scanner!

Tickets are $3.00 in advance. ($4.00 at the door.)

Inside Vendor Spaces are $11.00 each and include one admission ticket.
Additional spaces are available for $8.00. (Inside vendor setup will be on
Saturday night 6pm-9pm and Sunday morning at 6am.)

Outdoor Vendor Spaces are $4.00 each.

For reservations or info, call Rich James, N8FIL at 1-800-404-2282, visit
our WWW site at "http://www.cars.org" or send e-mail to: hamfest@cars.org

First suggest you make sure there is 9600 activity in your area. Its not all that widespread.

If you learn how to make your purchase decisions without leaning on trivial feature-to-feature comparisons then you will have learned a huge lesson.

In general gleaning from magazine reviews and experience the off the shelf synthesized mobile radios range from poor to good at factory 9600. However these radios make excellent 1200 baud radios.

A synthesized UHF Azden is rated very good at 9600. The Icom IC820H all-mode is excellent but about $1400 (you really need that radio, you want to do OSCAR don't you?) Crystal controlled radios are your best bet, TEKK, MFJ, and Kantronics make new equipment.

My favorite is the Motorola Mitrek which can be found for $20 to $70, 30W to 110W, plus another $20 to $70 to recrystal, and another $15 for the manual. Another $15 for wider 10.7 MHz crystal filters to do 9600 better. Make sure you get channel elements, the front panel plug, and the key that opens the case. You are going to have to solder and tune if you get the Mitrek but it mostly tunes with only watt, volt, and frequency meters.

I've been in contact with a HAM operator in Chile. At the present time
his only link to the internet is via radio. So far he only has E-Mail at
1200 baud. I've been trying to set him up with KA9Q for the AtariST, but
the precompiled binary that I could find is rather outdated! He needs the
KISS protocol to connect with tcp/ip to his present ISP. If anyone on
here wants to give a helping hand to a fellow HAM operator contact

ce6coq@ce6ezg.radio.cl

I'm totally out of my depth when it comes to HAM radio!

WINDTRAX VII FLIGHT IS SATURDAY!!!

June 1, 1996 at approximately 1200 UTC (start checking about 6am Indiana time),

Launch site: 2.5miles east of Whiteland, Indiana (south of Indy about 10 miles)

Prelaunch Freqs: Check-ins: 3.871MHz, & 146.835/R locals
Nets begin at 1130UTC

Balloon Type: Kaymont 1200 Gr.

Parachute Size: 5 foot diameter custom made by KB9BSV

Flight packages;
Crossband repeater (by Paul /W9DUU)
2m rcvr to 6m & 70cm xmtrs, with voice ID & nicad pwr pack, dual half wave antennas
GPS/Packet(By Chuck/WB9IHS)
Garmin rcvr, Paccom controlled (HandiPacket) & down-linked on TEKK 446MHz xmtr.
Self contained, nicad & lithum powered, 1/4 wave xmtr antenna, Ball Corp stripline rcvr.
Stripline antenna on top of box. Audio beeper for ground retrival of packages.
ATV(by Terry/KT9V)
Two (2) B&W CCD cams, WB8ELK color video graphics downlinked on Wyman ATV xmtr
with 1/4 wave antenna. Self contained, lithum powered. CCD cams are mounted one
shooting horz., and one up, solid state switching controlled.

Flight Package Freqs;
Crossband rptr; Dn 52.525 & 444.85 MHz (VP) 50 & 100mW output Up @ 144.3MHz (VP)

GPS/PAcket: Dn 446.0 MHZ @1200 Baud packet (VP) 250mW output.

ATV: Dn 439.25 MHz (VP) 1.5 WATTS OUT!!!

All amateurs are welcome to participate, checkin, monitor feeds, etc. Pix will be posted on the following WEBSITE:

www.surf-ici.com/marc Stop by and get a birds eye view from 95,000 feet up!

For details on the WindTrax Group and the WindTrax program, contact Chuck Crist/WB9IHS via email, mai@iquest.net

2782. Fooling around with RTTY "hamcom22.zip"

I been interested in fooling around with RTTY, just for the heck of it, and finally found a software decoder (almost - it needs a simple level translator) in the form a program called "hamcom22.zip". The program looks pretty solid and contains lots of interesting features. I was wondering if anyone had any knowledge or experience with the program.

It would be nice to hear any other experiences before I commit a Sat P.M. get it up and running ?

If there is any interest, I'll let you know how it works out.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.amateur.space

visees sont celles qui sont les plus fortement congestionnees et utilisees. D'autres bandes qui auraient ete aussi bonnes au point de vue technique, et qui n'auraient pas nui a quiconque, ne sont pas comprises dans la liste. Il semble avoir un but politique ou personnel quelconque derriere ca, mais qu'importe la raison, ces propositions ne devront jamais devenir realite. C'est la premiere fois, de memoire, qu'un autre service serait propose pour la bande de 144 MHz. Faisons en sorte que ce soit la derniere.

Les deux bandes amateur visees consitituent les pierres angulaires de nos activites de service au public. Bien plus souvent qu'autrement, ce sont ces bandes qui servent le plus sur un site d'un sinistre ou d'une urgence quelconque, ou lors des activites de communications pour les evenement communautaires. La phonie, les donnees numeriques, mobile, fixe, meme la television, et la liste se prolonge, autant dans l'immediat que dans l'avenir. Quelle logique y a-t-il dans ces choix??

Meme apres que l'ARRL ait explique ces enjeux aupres des representants de l'industrie, on ne recut pas plus d'assurances que nos bandes seraient retirees. Meme qu'il fut repete que jusqu'a ce que leurs besoins soient satisfaits, toutes les bandes resteront sur la liste. Ceci n'est pas satisfaisant pour nous.

Alors, on vous appelle pour votre assistance pour defendre NOS bandes. Nous devons faire pression aupres des autorites americaines et canadiennes pour que ces propositions meurent dans l'oeuf. Nous devons faire valoir notre position avec une telle force, avec un tellement grand nombre de reponses que plus personne ne sera tente de recommencer une telle betise. Il ne faut pas attendre WRC-97 pour combattre cette menace, IL FAUT COMMENCER MAINTENANT.

Voici une liste d'adresses des gens impliques dans cette affaire, y compris celles des gens de l'industrie satellite (commercial) qui ont pris partie dans cette menace:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554,
E-MAIL: choliday@fcc.gov FAX: 202-418-0748

Warren G. Richards, President, IWG-2A, Dept. of State, CIP 2529,
Washington, DC, 20520
E-MAIL: richardswg@ms6820wpoa.us-state.gov FAX: 202-647-7407

Tracey Weisler, Representant FCC, IWG-2A, International Bureau, FCC,
Washington, DC, 20554
E-MAIL: tweisler@fcc.gov FAX: 202-418-2824

Mary Kay Williams, Final Analysis Inc, 7500 Greenway Center, Suite 1240, Greenbelt, MD, 20770 FAX 301-474-3228

Il y aurait aussi Industrie Canada, qui pourrait etre interesse. Ou votre depute federal. Envoyez-leur vos commentaires,

en autant qu'ils sont polis. Si vous etes capables de faire vos arguments d'une facon intelligente et sans recourir aux insultes et aux menaces, c'est d'autant plus efficace pour attirer l'attention. L'objectif, c'est d'eduquer et de persuader, et non d'intimider, car les faits sont de notre cote.

Les preparatifs pour WRC-97 peuvent etre consultes sur le site WWW de la conference: http://www.fcc.gov/ib/wrc97/

Ecrivez maintenant. C'est important.

You can also find a monitor cable on an old Atari ST monitor, or
an Atari-to-SCART cable. It has the same connector.

I have soldered my own Atari SCART cable in the past, so it certainly
is not impossible. But it certainly should not be one's first exercise
into soldering :-)

And what exactly have you added to advance technology?
There is plenty of RF spectrum for the commercial operators to exploit, so
don't start with this political crap "Progressive radio...". If it weren't
for Amateur Radio you would probably still be communicating with two tin cans
connected with a string.

Thanks for the comments. By our measurements the typical user operating at 21,600 to 28.8 kbps loads the main page in 20 to 30 seconds; at 14.4 kbps you'll see about 45 to 60 second loads. A 14.4 modem is our target user. However, the actual load time varies depending upon server load and Internet traffic. We rent our server space at AccessOne in Kirkland WA. They connect to the Internet over two T-1 connection (1.544 mbps each).

Depending on your browser, you may be able to disable the display of graphics or ensure that your browser caches images so that they do not need to be downloaded each time. My browser also lets me page up and down and read pages before the entire page has been loaded. This let's me select things to read without necessarily waiting for the entire page to load.

We are also in process of setting up the web site on a new ISP that may have higher performance. We'll post a message when that becomes availble - probably its a month out at least.

We know that as our hobby web site has grown, the size of the pages has also grown. We've redesigned the web site twice since starting and its time for another redesign to accomodate the increased content.

We would like to do a redesign some time but that's easier said then done. We run this web site solely as a hobby. My real job typically uses up 11 hours a day of my time; we've got 3 small kids. And other time pressures too. Sometime we will change the page design again but I would not expect more than perhaps a 1/3rd reduction in download time.

If you are looking for digital communications (after all, this IS the digital newsgroup), then check out the MFJ 8621 data radio. 5 watts, and runs 1200-9600 bps "out of the box".

If you want voice, though, you're
"stuck" with the regular handhelds. Be sure to get one that has a few watts; the 1/4 watt class of micro handhelds just don't have enough power to get that far reliably.

You may want to check out the commercial handhelds. They cost more, but are more likely to hold up better in such harsh environments.

There may be some dedicated DSP chip to do what you are asking.

> I'm mainly looking for something in the 70-78MHz range.

Good luck. A DSP running at that range would have to have a 200 MHz (or better)
CPU, which is not cheap. That's why practically all DSP is done at the IF or audio
stages. (455 kHz is "trivial" for DSP chips.)

You may be able to find an analog chip for that range.

This probably sounds like a weird request but I was wondering if
any of you possibly have the article out of a 1991 73 magizine that has
some information about building a bell 202 modem and using it for packet
using a program called PMP (poor mans packet) through the paralell port
of a PC. It would be great if any of you had a scanned copy or could
scan a copy and send it to me via E-mail.

Thanks,

In other words, you don't believe that the whole idea of amateur communications is to promote electronics and communications? In other words, there is also a "good ole boys" factor? Or perhaps you mean that the whole idea of "promoting amateur communications" also includes a competence test, like driver's licenses? Well, sir, neither driver's driver's licenses nor any sort of code test has ever promoted competence. If you were looking for competence, perhaps the test should include a small set of parts for which the potential operator is expected to assemble a working crystal set and decode the sequence of CW codes emanating from a reasonably strong receiver placed in the room. But merely being able to transcribe and/or key CW is purely a measurement of one's discipline, memorization ability, and motivation.

Hello,
I'm looking for an IC or IC's which I can control by an microprocessor to tune in into a certian freq. and reject the others. I'm mainly looking for something in the 70-78MHz range. For example I would like to be able to tune in 72.100 MHz and reject the other then be albe to tune into 74.500MHz and so one. A digital band-pass is what I'm looking for. But I need to be able to tune in any freq by an address or code. Any help would be greatly apperseaited (pardon my spelling.)

I had some time tonight. I redesigned the main web page for faster download times. At 21,600 bps, the main page downloaded in 15-20 seconds. The newsletters, propagation and start/welcome sections have been simplified and moved to their own pages accessible off the main page. Everything is still there - just moved to new locations.

The main page has (at the moment) 3 graphics: the Ham Radio Online title banner (highly compressed JPEG at about 8kbytes), a picture of the Yaesu FT-50R (JPEG compressed at about 3.7 kbpytes) and the background graphics (4 kbytes). The overall text is about 12 kbytes, plus maybe another misc 2 kbytes (EFF logo, WA logo). That works out to about 30 kbytes total for the main page which should download quickly at 14.4 kbps. As soon as the 12 kbytes of text (hronline.htm) is downloaded, your browser should allow you to scroll around, even if the graphics are still coming in. 12 kbytes ought to download in 10 to 20 seconds depending on your modem speed, server load and Internet traffic.

Please write us at vbook@vbook.com and let us know what you think of the new design.

The June edition of Ham Radio Online is up on the web site. The number of articles should more than double from what is up there now. It takes a while to get the new articles edited so watch for new stories appearing over the next couple of weeks. Great product review on the Yaesu FT-50R. Lots of other goodies coming up soon.

Also, we redesigned the main page a bit for faster downloads.

*****ARRL NEW ENGLAND DIVISION SPECIAL BULLETIN 96-9A*****

QST to all Amateurs

May, 1996

Strafford, VT

NEW ENGLAND DIVISION DIRECTOR NEW ENGLAND DIVISION VICE DIRECTOR
Bill Burden WB1BRE Warren Rothberg WB1HBB
wb1bre@arrl.org wb1hbb@arrl.org

********** 2 Meter AND 70 cm BANDS THREATENED **********

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND) AND 420-450 MHZ (THE
CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming editorial for
July QST in this bulletin. ARRL, as the principal representative of
Amateur Radio in Washington, is actively pursuing this issue as this
bulletin is being written. Dave's call to action is serious!! We could lose these bands if
we do not take action now!!
Club presidents and newsletter editors: please make this
information available to your membership as soon as possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer. There's work to be done! Your help is needed to defend two meters and 70 cm. Yes, that's right -- the two most popular and crowded amateur VHF/UHF bands! But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997 ITU World Radiocommunication Conference, WRC-97. In the past, the public has been able to participate in the preparations for such conferences by responding to FCC Notices of Inquiry. In March, the FCC announced a streamlining of its International Bureau's preparatory processes for WRCs. Under the new scheme, the NOIs have been eliminated in favor of increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups (IWGs) of the Advisory Committee has been created to address specific agenda items. The output of each IWG will go directly to a joint FCC-NTIA-Department of State Steering Committee of the Advisory Committee. There, draft proposals as received from the IWGs will be reviewed and forwarded to the FCC for possible release as preliminary U.S. proposals for public comment.
In announcing the streamlined WRC preparatory process, the FCC tried to reassure those who might be concerned about reduced opportunities for public participation: "Interested parties should note that input to the Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee,on C. Ladson, the alternate federal officer."
Hold that thought while we shift gears to the substance of the issue.
One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile- satellite service. So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL technical relations staff participates in IWG-2A to represent Amateur Radio interests.
At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically
more feasible but to which strong objection from incumbents could be expected -- the point being
that some political, rather than purely technical, judgment already has influenced the list.
Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for

the two-meter amateur band. We must make sure it is also the last time. We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide the backbone of our local public service communications effort. Voice and data, mobile and fixed, even television -- the list of present amateur uses is a long one, and of future uses is even longer. Both are already used for satellite services and for moonbounce and extended-range terrestrial operations requiring extremely sensitive receivers and high levels of effective radiated power.

Apparently we did need to explain all this to the little LEO industry representatives, so we did just that -- both at the meeting and iup letter on May 15. We also explained that we had to regard the matter as extremely serious. No one with the slightest background in radiocommunication could possibly believe that a mobile- satellite service could be introduced into either band without disrupting existing and future amateur operations. Therefore, we said, if we did not receive assurance that they would be taken off the list of candidate bands by the deadline for this issue of QST, we would have no choice but to bring the matter to the attention of the entire membership.

The response we received was unsatisfactory. In effect, we were told the little LEO industry would consider our views but that until their spectrum needs are satisfied, all bands must remain under consideration.

So, this is a call to action. We must get across to the industry and government participants in IWG-2A that the 144- 148 MHz and 420-450 MHz bands cannot be considered as candidates for mobile-satellite services. We need to drive the point home so forcefully, with so many grassroots responses, that no one is ever tempted to try this again.

Which brings us back to that invitation for "interested parties" to send input "at any time." There's no time like the present! Here are the key addresses, including those of the mobile-satellite industry folks who seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554; choliday@fcc.gov; FAX (202) 418-0748.
Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520; richardswg@ms6820wpoa.us-state.gov; FAX (202) 647-7407.
Tracey Weisler, FCC Rep., IWG-2A, International Bureau, FCC, Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.
Mary Kay Williams, Final Analysis, Inc., 7500 Greenway Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.
Leslie Taylor, LTA, 6800 Carlynn Court, Bethesda, MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who are simply doing their jobs. We have to get across that casting covetous eyes on amateur bands is counterproductive, and contrary to the public interest. To accomplish this we need a lot of comments, including yours. But remember that the objective is to educate and persuade, not to intimidate. We don't need to. The facts are on our side.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK .....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
5,400 FILES IN 117 FILE AREA'S..so far !

latest list of AMATEUR RADIO WEB SITES & PAGES
now 2,268 websites & pages !!!!!!!!!
and GROWING FAST ?!?!!

P.S. also available on the web at:

http://www.padl.ac.at/schule/chemie/bob.htm
look for web-sites by KB6AXK on the page........

FYI:there are roughly ,over 33,000 pages,just pages,
that relate to amateur radio/ham radio on the web ???????
My list is primarlly websites.............

Thanks for reading this. I have a freind who is running TPK Packet
radio program on OS/2. It appears to work well except if you open
another task and tehn task swap it causes the system to lock up forcing
a system reboot. Is anyone out there running TPK and if so have you
had simialer problems and is there a fix or better still is there a
OS/2 packet program that has the same features as TPK

The best thing to do with the 2m Ringo Ranger is to throw it in the trash and put up a homemade 1/4 wave groundplane. You will get the same results from the 1/4 wave. Or better yet sell the Ringo to someone who don't know how bad they are.

Good luck

Try Paket 6. I run it in an OS/2 dos box with no problems. I am also
using Ray Gwinn's SIO OS/2 com driver.

FDK Problem. This is not digital, but I only subscribed to this list and
I suppose as the radio is for packet prehaps I might get way with it 8).
I have a FDK 750E Multibander on 144 Mhz, no this problem I have had before
and the guy who fixed it said it was easy, but I can no longer contact him.
So here it is:
When in transmit there is no output power there is also no indication on the
scale, the rx light goes out and the tx light turns on but thats it, it
recieves perfect no problems, but haveing a packet radio that only listens
is not to good!. I have looked myself, and think that this may be the tr27
but not having one to try I am not sure, so if you have had the same
problem with one of these radios what was it please ??

>International Satellite Organization - North America ISO-NA
>"Progressive Radio through Capitalism, not Socialism"

OK, Steve, tell me more about why the proposal is more beneficial
than the hams have offered on their most populated ham bands in the
past several decades.

These, of all the ham bands lend themselve more efficiently and more
effectively in conditions of dire emergency so that dedicated
hams will volunteer their time, equipment, and yes, their expertise
to the survival of human beings in their communities.

Tell me, Steve, what are the details of this proposal that elicit
your support? Perhaps it is an impressive technological offering
to our public. I would like that. But will it's value compare to
the offering of hams who are motivated by what they can LEARN and
ACCOMPLISH without the lure of money?

True, the technology we use is often that which has been around for
a while. But what would happen if suddenly the pecuniary interest
restriction were removed?? I'm not suggesting that be done, but
to compare the usage hams make of these bands to the usage that
commercial interests might make of them is like comparing apples to
rocks.

I submit that the TRUE VALUE and effective use that hams now make of
these bands is immensely greater than that which just MIGHT be
realized by a commercial application. What's more, no speculation
is required. (True value is not measured in $$.)

Again, don't get me wrong. I think the LEO satellite application
might be very exciting. But if these ham bands are sacrificed,
I can't see that it's worth it.

73,
Dick - W7DHS

On a 286, it is likely that you can have a jumper on your serial card out of place, or that only one COM port is 'active' depending upon whether a 'chip' exists on the card for a second port. Most newer (ASI cards, etc) include 2 serial ports drivers STANDARD. Older cards did NOT.

Without documentation, you are just sunk.. especially about the jumpers. Suggestion: Seek out a used computer store.. -or- find a serial card with two ports.

Additionally note... if you are using a serial mouse on your computer, it will take one COM port. Also, older PC's needed proper control software to handle COM3 and COM4. Since those two 'quasi' ports share interrupts with COM1 and COM2, use of COM3 and COM4 ought not to be used.

Last hope.. you can gamble placing a new serial card in your old 286.. it is a gamble because the processor on the new card may be too fast for the older machine. On the other hand new serial cards are pretty cheap. 'Your call'.

Take care and good luck

P. Sussman

>KF4AUY/AAT4AD
I have the short two page manual for this if you need. I think it is
a good little antenna.

If you already have the manual:
If I remeber correctly, all I did was keep measuring swr until it was
at a minimum in the middle of the band. Any swr meter will work, all
you are looking for is a minimum not an exact measurement. Keep
sliding the little bar on the ring until it is at a minimum and then
screw it down tight enough to keep it from moving.

I just purchased Alinco DJ-F1T/H 2 meter "micro"- HT and it was only $249
and output is 100mw/1w/5w. Sounds like enough power. Does well as a
packet radio (compared to some others at least). I can hits 4 miles on
100mw and 1W will hit the downtown repeater at 13 miles. With the
micro-duck ant. my quad gets me 20miles on 1w so I think you should
check it out. Call Alinco at 1-310-618-8616. and ask for info on the
DJ-F1T/H (must specify the H for high power5W if desired).

I have been using TPK on OS/2 Warp in a year now. Like many other DOS programs polling the comport, TPK easily hogs the CPU. This can be adjusted in the DOS settings within OS/2. I run TPK over BPQ for OS/2, so mybe there are some differences here.

2823. Introducing Pescador V1.0 (Beta)

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-03 00:00:00 UTC
From: colla@vnet.ibm.com
Message-ID: <4our7n$n14@bocanews.bocaraton.ibm.com>
Source record: 36715

This is a refresh of a previous post.

Introducing Pescador Version 1.0 (Beta) available at ftp.funet.fi as
/pub/ham/terminal/pescav1d.arj.

This program allows the capture of mail forward on a channel by means
of the BBS forward pasive monitoring; captured mail is made available
as an export file to be processed into the local BBS/PMS.

Both W0RLI (ASCII non-compressed) and F6FBB (binary, compressed) protocols
are supported for monitoring.

Capture efficiency varies with channel activity, but it's very high enough
to truly complement the forward received by conventional ways reducing
the bandwidth used for that purpose.

Runs under the G8BPQ packet switch as a DOS application, it could be
run under DOS+DesqView, Windows or OS-2.

Hardware requirements are minimum (PC, 512K RAM).

Please direct questions & suggestions to colla@pec.pccp.com.ar.

Best Regards, Pedro (LU1BUV).

>73's John (ZL2TCA)

I had the same problem a couple of years ago and after receiveing the
following message, have been runing TPK in a DOS window ever since. I too
would like to find an OS/2 based FBBS program.

He is the response I received from WD8BTU and use:

The following are the DOS settings I found that made TPK 1.81 work very
well under OS/2 Warp 3.0 on my 486DX2-66 PC. If you're having trouble
running TPK under Warp, you might try changing the settings as outlined
below.

I had trouble with the computer slowing down to a crawl, especially while
running Windows programs at the same time, before I finally found the
correct DOS settings for TPK. Also, sometimes I couldn't print from TPK
until I rebooted the computer (!). Those problems are 99% cured by
changing the settings below. I've run these settings for some time with
very few problems. The computer stays on most of the time copying packet
(TPK copying the unproto message broadcasts from a BBS running F6FBB
5.15); no slow-downs, crashes, lock-ups or anything major happens.

I run TPK in a DOS window at 43 lines (default), 800x600 resolution, at a
font size of 14 x 8. Maximize the window and manually stretch the right
side to max, and you'll be able to view all but one line of text.

These are the changes; The rest of the settings are unchanged, for the
most part.

```
COM_DIRECT_ACCESS OFF
COM_HOLD ON
DOS_BACKGROUND_EXEC ON
DOS_DEVICE D:\OS2\MDOS\LPTDD.SYS
DOS_HIGH ON
DOS_UMB ON
HW_ROM_TO_RAM ON
HW_TIMER ON
IDLE_SECONDS 0
```

IDLE_SENSITIVITY 5
INT_DURING_IO ON
SESSION_PRIORITY 1
VIDEO_WINDOW_REFRESH 8

I realize that some of these are quite a departure from the recommended settings in the OS/2 on-line info files for a communications program, but this is what works with TPK here. We don't miss any characters, and we only have 16450 UARTS (non-buffered). I'm using a KAM+ on COM2 @9600 baud, hooked to both HF & VHF ports.

There is a bug in OS/2 that sometimes displays the last line double in a DOS window at 43 lines, but it's no big deal; it's much more pleasing to look at than a full DOS text screen on my SVGA monitor (ALT-HOME takes you to full-screen). Back-scrolling is slow, but it is in Microsoft Windows, too; I ALT-HOME it to a full screen sometimes for that reason.

I have the first release of Warp (a few bugs), but I love OS/2, bugs and all.

If you have any suggestions or comments, I'd appreciate hearing from you.

Source record: 36721
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc

What is the proper addressing for sending international traffic
by way of packet? The normal means of sending traffic in something
like MSYS is zip-code@NTSxx where xx is the two letter state
abbreviation. Is there a way to do something similar for traffic
that is destined for a foreign country?

Hi all,
Thanks for read this message, I'd heard that some aplications like
FTP, TELNET, WWW, and so on can run over packet radio.
I've the etherax25 driver, the Trumpet winsock, but I don't know how
configure it for this porpousal.
Another question is... can it run with a baycom modem?

Any solutions please?

Thank you very much,

>I been interested in fooling around with RTTY, just for the heck of it,

Fooling around, I have found RTTY and other teledata modes to be quite
fun, giving that NON-OPERATOR presence that can be found with packet.

>and finally found a software decoder (almost - it needs a simple level
>translator) in the form a program called "hamcom22.zip". The program looks

Look for hamcom3 its always being updated ..

>pretty solid and contains lots of interesting features. I was wondering
>if anyone had any knowledge or experience with the program.

Yes, I have, however if you decide to build the interface build the one
in version 3 as it has a better filter on it!, and also I find the best
method is to use the txd pin for tx as then you can easily swap over to
jvfax or what have you and send sstv and if you modify the modem a little
more you can also run packet radio but its a bit hit and miss.

>It would be nice to hear any other experiences before I commit a Sat P.M.
>get it up and running ?

Get committed thats half the fun!!

Actually the new DSP-based HF rigs from Kenwood and Icom(?)
have a last IF in the 10-15kHz range. Presumably audio
codecs are used. In theory, a radio with a digital IF
would be simpler, but these radios still need lots of
expensive and big crystal filters to get enough dynamic range...

The recent QST reviews of these radios are good reading.

The MFJ 1270 is a clone of the TAPR TNC-2. You can get a copy of the
TAPR documentation from ftp.tapr.org in the file
/tapr/software_lib/tnc/tncdocs.exe.

TAPR sells a kit for a 9600 bps modem, including the header (not
socket). See http://www.tapr.org for details on this and all TAPR kits.

It would be difficult, if not impossible, to successfully use the 9600
modem with a HTX-202, by the way.

Before you send the flames, let me state that I do hold a valid amateur license (N7JCT) and have done so since 1987.

As a commercial communications technician I work with analog and digital communications every day. I build communications networks, the backbones that handle the bulk of today's mobile communications (i.e.: cellular, SMR, PCS, etc).

It has been my experience, please correct me if I am wrong, that nowhere in the US are amateurs transmitting voice or data and anything above 9600 baud in the VHF or UHF bands. In fact, most data on those frequencies is 1200 baud half duplex AX25. In our world today this is almost as inefficient and antique as communicating by using Morse code.

Most of today's commercial mobile traffic is analog although the trend is to go digital. In either case the mobile units talk to a base which relays it's data onto the network. If the original signal was analog it is usually converted to digital at this point and mutliplexed onto the network. Once the traffic is on the network it can be routed anywhere in the world in just a few seconds. I know of very few network links under 1.544 MB (that's megabaud or 1544000 baud).

The point is that commercial communications is much more efficient and reliable than amateur radio. It has to be reliable because stockholders are demanding that companies make money and in order to make money you can't have down time. Customers are paying for each second that they communicate so they expect communications to be available every second of every day. Amateur radio is a hobby supported by disposable income and therefore is less reliable, much less efficient, and much less in demand.

Commercial interests will be able to provide a better use for this spectrum because, as I've pointed out, their applications will be more efficient and reliable. Their use of this spectrum will add to the GNP and we, as a nation and a world, will be better off.

As amateurs we can be proud. Bid farewell to those frequencies with a salute to yourselves for pioneering the communications technology that made all this possible.

But remember, the pioneering work might be over in the VHF and UHF bands but it is just beginning in the higher frequency bands. There is more bandwidth up there than both all of our VHF, UHF, and HF bands combined. Enough bandwidth that every ham could have a 1.544 MB connection to the internet running from his/her home (and wouldn't that beat the heck out of the 28.8 KB connection you're using now!)

How many of you who oppose the reallocation of these bands are pioneering new, worthwhile communications systems? Are you doing anything to advance the state of the art or are you just using your $500 dual band mobile as a glorified CB radio to chat with your pals?

Please don't look at a reallocation as a threat to amateur radio. Look at it as the kick in the seat that we all need to get up and do something productive with our hobby.

When it comes right down to it, the people who determine who gets what spectrum will be looking at the value received from that spectrum's use. Can you honestly say that our current use of these frequencies justifies our keeping them? Don't kid yourself about emergency communications because everyone who has recently worked at a disaster site knows that commercial communications (such as cellular, SMR, and land mobile radio) are better suited for the task and always more readily availble.

So long to my old friends, the 2 meter and 70 cm bands. Hello to the exceiting new world of pioneering communications

I have composed the following letter to the appropriate individuals in regard to the threat to our 2 meter and 70 cm bands. I am placing the letter in the public domain. Feel free to use it in any way you will. You may sign your own name to the letter or you may edit it to more clearly reflect your own opinions. But whatever you do, PLEASE write the appropriate individuals at the following addresses:

Cecily C. Holiday, International Bureau, FCC, Washington, DC 20554, choliday@fcc.gov, fax 202-418-0748.

Warren G. Richards, Chair, IWG-2A, Department of State, CIP 2529, Washington, DC 20520, richardswg@ms6820wpoa.us-state.gov, fax 202-647-7407.

Tracey Weisler, FCC Rep, IWG-2A, International Bureau, FCC, Washington, DC 20554, tweisler@fcc.gov, fax 202-418-2824.

Mary Kay Williams, Final Analysis, Inc, 7500 Greenway Center, Suite 1240, Greenbelt, MD 20770, fax 301-474-3228.

I recommend a fax, an e-mail AND a surface mail edition if possible.

[LETTER FOLLOWS ---- CUT HERE]

To: Warren G. Richards, Chair, IWG-2A
Re: Amateur Band Reallocation
Date: June 3, 1996

Cc: Tracey Weisler, FCC Rep, IWG-2A, Mary Kay Williams, Final Analysis, Inc, Cecily C. Holiday, International Bureau, FCC

It has come to my attention that the IWG-2A is preparing draft US proposals for the 1997 World Radiocommunication Conference. It has further come to my attention that the IWG-2A has before it a list of ''candidate bands'' for low-earth orbit mobile satellites (''little LEOs'') that includes, among a number of others suggested for consideration, the 144 and 420 MHz bands, that is, the 2 meter and 70 cm bands currently allocated to the Amateur Radio Service. The fact that these bands are even being considered is outrageous in the extreme. Although it might appear, at first blush, that these frequencies might serve the LEO service well, there are a number of reasons why it is the best interest of the IWG-2A to look elsewhere:

1) These are the most heavily used bands in the Amateur service used by nearly all of the approximately 700,000 US amateurs as well as the 10 million operators world-wide;

2) In addition to normal voice communications, these frequencies already house a gigantic international digital packet radio network similar to the Internet;

3) These frequencies serve the internationally acclaimed amateur satellite service and as such are used by a plethora of satellites funded by common citizens donating millions of dollars toward their construction and deployment;

4) These bands are heavily used by a number of public service organizations including:

- ARES, the Amateur Radio Emergency Service,

- RACES, The Radio Amateur Civil Emergency Service which is coordinated through state and local disaster relief organizations,

- MARS, the Military Affiliate Radio Service which provides familial communications for hundreds of thousand of US service personnel and coordinates with the military during communications emergencies and

- Handi-Hams, and agency that providing technical education for handicapped citizens. Indeed the preceding only scratches the surface of educational and public service activities that are conducted on these bands these range from the coordination of the Boston Marathon to local astronomy networks.

Please understand that if this proposed reallocation were to occur, millions of individuals would see the value of their property reduced to nothing. While the reallocation of these bands to little LEO service would entail horrendous problems for millions of citizens, it would be unmanageable by industry as well. The public outcry against this action will clearly be felt by congress. Right now, hundreds of thousands of letters similar to this one are arriving at the FCC as well as all congressional delegations. The clout of even a well-heeled industry group such as yours cannot hope to compete with the pressure brought to bear by hundreds of thousands of concerned voters. For you, this could only be an exercise in frustration. It is clearly in your best interest to look elsewhere.

Even if you were somehow able to have these frequencies reallocated, they would be almost impossible to manage. Imagine trying to conduct paging operations on frequencies for which millions of multi-mode transmitters and antennas are already in the hands of individuals who believe that they have been robbed. Not that I would endorse illegal activity. Far from it the vast majority of amateur radio operators are strictly law-abiding. But clearly this reallocation would create an unusually complex as well as emotionally tense situation that would be difficult to police and painful to all concerned, even if it directly involved only a tiny minority.

Please do the industry as well as the American public a favor and make sure that the amateur 2 meter and 70 centimeter bands are excluded from consideration for reallocation to little LEO service.

2845. FS: TI C5x DSP Starter Kits (DSKs)

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-04 00:00:00 UTC
From: cole@netcom.com
Message-ID: <coleDsGK8r.I3A@netcom.com>
Source record: 36731
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

I still have a few TI 320C5x DSKs (DSP Starter Kits) for sale. The TI part number is TMDS3200051. They are all brand new and have never been opened.

These kits are designed for students, experimenters, and developers who need a simple, low-cost way to prototype DSP-based applications for the TI 320C5x series of DSP chips. The kit includes a small (2.5" x 4") PC board with a TMS320C50 processor, a TI Analog Interface Circuit (AIC) chip with 14-bit A/D and D/A capable of sample rates to 19.2 K samples/sec, RCA jacks for analog I/O, and a 9-pin RS-232 host interface. The kit also includes a simple assembler, loader and debugger for the PC, a kit manual and a TMS320C5x manual.

The latest versions of the software as well as several user-written demo programs can be downloaded from the TI BBS, accessible via TI's FTP host ftp.ti.com, in directory /mirrors/tms320bbs. The board requires a 9 volt *AC* power supply capable of >250 ma. A 9 VAC 780 ma supply with the right plug is available for $8.99 from Radio Shack (Part # 273-1630).

TI sells these through distributors for $99, and purchasing them through distributors can be a hassle. I'll sell them for $60 each shipped within the US. Terms: Price is firm. The units are guaranteed against DOA. Immediate shipment if payment is by USPS or other money order or cashier's check. Personal checks are OK but I'll wait for them to clear. No CODs, please.

In many (most?) countries it is not legal to send 3rd party traffic
via amateur radio, hence there is no NTS system operating there.

Thanks to everyone who responded to my post about using HF BBS
stations for e-mail to a ham on a sailboat..

I upgraded my PK-232 to Pactor and tried a qso on 20 meters. It worked
fine.
Now I am ready to try one of the HF BBS stations, but I have a dumb
question. Most of these stations list many frequencies. Are they
scanning all these frequencies? How do I initiate contact? Do I just
call them? I assume they do not put out a "CQ". Do I just start
giving their call, until I am connected? Since I may not be on their
exact frequency, this seems to be problematic. Any help to my dumb
questions would be appreciated.

>N9MWB

Todd,
You can only send the traffic if the country it is destined to
is on the third party list. For example, to here (Guam) is
zipcode@NTSGU and the Philippines is NTSPI, problem
being the P.I. doesn't have zipcodes. After running a BBS and
a satgate for three years, I wouldn't recommend any international
NTS traffic, unless you really don't care if it gets there or not.
Most systems are not set up to handle it, and most system operators
are in the 'automatic' mode. NTS stuff would get here only after
someone in the U.S. caught it and figured out it was for Guam
and then readdressed it to me at my bbs. Send a message to
the operator of the system you are originating from if you don't
know the NTSxx of the country, and that will tell you if he is
even set up to handle it. I can dig thru my old forwarding files
if you tell me where it is going......

Yes, I am familiar with third party agreements. We do in fact have
a third party agreement with the country of interest (Australia).
In addition, it is possible to get third party traffic delivered to
a country that one doesn't have a third party agreement if
the message can be delivered to one or more intermediates
that do have third party agreements.

So is there a way to address such messages, or do I need to
check in with one of my local traffic nets and initiate the
traffic by hand? This is being done as a project by the students
in the radio club I sponsor and the first message someone
wanted to send was to Australia, sigh.

The ITU Radio Regulations do not say that. The state that international third party communications is forbidden between amateur stations. The Regulations further state that this provision can be modified by special arrangement of the conturies concerned. There is no mention of the third party origination or destination. For example, let us say that there is a TPA between Canada and US, and US and Germany, but there is not one between Canada and Germany. In accordance with the ITU Radio Regulations, it would be perfectly acceptable for a message originating in Canada for Germany to be passed first to the US then sent on the Germany because of the special arrangements. To emphasize, the origination and the destination of the message has no bearing in the exchange of the third party traffic.

********** 2 Meter AND 70 cm BANDS THREATENED
****

THIS IS NO JOKE!! ARRL HAS LEARNED THAT IN
PREPARATION FOR THE
WORLD RADIO CONFERENCE IN 1997, REPRESENTATIVES OF THE
LOW-EARTH-ORBIT
(LEO) INDUSTRY PROPOSED A LIST OF CANDIDATE
FREQUENCY BANDS FOR
REALLOCATION TO, AND EXCLUSIVE USE OF THE MOBILE SATELLITE
SERVICE. THIS
LIST INCLUDES 144- 148 MHZ (THE CURRENT AMATEUR 2 M BAND)
AND 420-450 MHZ
(THE CURRENT AMATEUR 70 CM BAND)!
IF THIS EFFORT WERE TO BE SUCCESSFUL, IT WOULD
MEAN THE END OF
AMATEUR OPERATIONS ON THESE TWO MOST HEAVILY UTILIZED
AMATEUR VHF/UHF
BANDS!

I have included the text of Dave Sumner's upcoming
editorial for
July QST in this bulletin. ARRL, as the principal
representative of
Amateur Radio in Washington, is actively pursuing this
issue as this
bulletin is being written. Dave's call to action is
serious!! We could
lose these bands if we do not take action now!!

Club presidents and newsletter editors:
please make this
information available to your membership as soon as
possible.

Follows the text of Dave Sumner's July QST editorial:

WRITE NOW!!!!

Get out a pen and paper, or boot up your computer.
There's work to
be done! Your help is needed to defend two meters and
70 cm. Yes,
that's right -- the two most popular and crowded amateur
VHF/UHF bands!
But don't panic, and don't "go ballistic."
Here's what's happening, and what you can do about it.
The United States is preparing for the 1997
ITU World
Radiocommunication Conference, WRC-97. In the past, the
public has been
able to participate in the preparations for such
conferences by
responding to FCC Notices of Inquiry. In March, the
FCC announced a
streamlining of its International Bureau's preparatory
processes for
WRCs. Under the new scheme, the NOIs have been
eliminated in favor of
increased emphasis on WRC Advisory Committees.
For WRC-97, a series of Informal Working Groups
(IWGs) of the
Advisory Committee has been created to address specific
agenda items.□
The output of each IWG will go directly to a joint
FCC-NTIA-Department of
State Steering Committee of the Advisory Committee.
There, draft
proposals as received from the IWGs will be reviewed and
forwarded to the
FCC for possible release as preliminary U.S.
proposals for public
comment.
In announcing the streamlined WRC preparatory process,
the FCC tried
to reassure those who might be concerned about reduced
opportunities for
public participation: "Interested parties should note
that input to the

Advisory Committee may be sent at any time directly to the Chair of the WRC-97 Advisory Committee; the Chairs of the Advisory Committee's Informal Working Groups; Cecily C. Holiday, the FCC's federal officer of the WRC-97 Advisory Committee, or to Damon C. Ladson, the alternate federal officer."

Hold that thought while we shift gears to the substance of the issue.

One of the WRC-97 agenda items includes consideration of possible additional frequency allocations for the mobile-satellite service.

So-called "little LEOs," low-earth orbit satellites below 1 GHz, already have allocations. Their proponents claim these are inadequate and are trying for more. The needs of little LEOs are being addressed in IWG-2A, chaired by Warren Richards of the Department of State. The ARRL☐ technical relations staff participates in IWG-2A to represent Amateur Radio interests.

At the May 7 IWG-2A meeting, an industry representative proposed a list of "candidate bands" for little LEOs. The list includes a number of bands that would negatively impact existing services, and does not include others that would be technically more feasible but to which strong objection from incumbents could be expected -- the point being that some political, rather than purely technical, judgment already has influenced the list.

Incredibly, 144-148 and 420-450 MHz were included on the list! This is the first time in memory that another service has been proposed for the two-meter amateur band. We must make sure it is also the last time.

We do not need to explain to ARRL members the extensive use that is made of these bands by amateurs. The two bands provide

the backbone of
our local public service communications effort. Voice
and data, mobile
and fixed, even television -- the list of present amateur
uses is a long
one, and of future uses is even longer. Both are
already used for
satellite services and for moonbounce and
extended-range terrestrial
operations requiring extremely sensitive receivers and
high levels of
effective radiated power.
Apparently we did need to explain all this to
the little LEO
industry representatives, so we did just that -- both at
the meeting and
in a followup letter on May 15. We also explained that we
had to regard
the matter as extremely serious. No one with the slightest
background in
radiocommunication could possibly believe that a
mobile- satellite
service could be introduced into either band without
disrupting existing
and future amateur operations. Therefore, we said, if we
did not receive
assurance that they would be taken off the list of
candidate bands by the
deadline for this issue of QST, we would have no choice but
to bring the□
matter to the attention of the entire membership.
The response we received was unsatisfactory. In
effect, we were□
told the little LEO industry would consider our views
but that until
their spectrum needs are satisfied, all bands must
remain under
consideration.
So, this is a call to action. We must get across
to the industry
and government participants in IWG-2A that the 144- 148
MHz and 420-450
MHz bands cannot be considered as candidates for
mobile-satellite
services. We need to drive the point home so forcefully,
with so many
grassroots responses, that no one is ever tempted to try
this again.
Which brings us back to that invitation for

"interested parties" to
send input "at any time." There's no time like the present!
Here are the
key addresses, including those of the mobile-satellite
industry folks who
seem to have started the ruckus:

Cecily C. Holiday, International Bureau, FCC, Washington,
DC
20554; choliday@fcc.gov; FAX (202) 418-0748.
Warren G. Richards, Chair, IWG-2A, Department of State, CIP
2529, Washington, DC 20520;
richardswg@ms8620wpoa.us-state.gov; FAX (202) 647-7407.
Tracey Weisler, FCC Rep., IWG-2A, International Bureau,
FCC,
Washington, DC 20554; tweisler@fcc.gov; FAX (202) 418-2824.

Mary Kay Williams, Final Analysis, Inc., 7500 Greenway
Center, Ste. 1240, Greenbelt, MD 20770; FAX (301) 474-3228.
Leslie Taylor, President, LTA, 6800 Carlynn Court,
Bethesda,
MD 20817; ltaylor@lta.com; FAX (301) 229-3148.

Do comment. But be civil. Don't abuse people who
are simply doing
their jobs. We have to get across that casting covetous
eyes on amateur
bands is counterproductive, and contrary to the public
interest. To
accomplish this we need a lot of comments, including yours.
But remember
that the objective is to educate and persuade, not to
intimidate. We
don't need to. The facts are on our side.
To monitor the FCC's ongoing WRC-97 preparations,
visit its WRC-97 home page at:
http://www.fcc.gov/ib/wrc97/.

RS 232 is an interface specification, not a data protocol. It doesn't
even specify the D-connector, just any one with 25 pins. Therefore the
fact that you are not finding any protocol information is proper.
Different proprietary data protocols (and there are SO many!) often use
the various interface leads in different or unique ways. The BAYCOM
software is a classic example - it doesn't use TD and RD at all.

I just picked up a MFJ-1270 TNC 2 at a hamfest. It came with no documentation and I am very new to packet. I was wondering if anyone had any advise on this TNC or on packet radio in general. I plan to connect it to a HTX-202. The Ham that sold it to me said that there is a way to connect a 9600 baud TAPR modem to it but you needed a socket. What did he mean by this or where can I get the plans? Any help would be appreciated.

Take a look! The original address given did not have a p in the word compuserve. Spell it right and it works great.

I was reading on the kam homepage that their latest eprom supports pocsag digital pager decoding. I was wondering if anyone has tried it and how did it work for them?

I'm puzzled by how you expect to get TCP to hold back. If it has a timer
running and that timer expires then surely its gonna send something
whether you have a UI or VC connection underneath it. All I can see
happening is even MORE traffic on the channel as a VC connection will
require error recovery (via timeouts etc) that operate even faster than
the TCP timeouts that you are trying to avoid!!

I've never had a problem with Trumpet Winsock, which I assume has the
standard exponential backoff algorithms when using it via a packet
driver to a second machine which then encapsultes things into UI AX.25
frames. If its all done on a single machine using a packet driver
lookalike such as Ethrax25 then surely that will operate the same.

I think there may be problems with Ethrax25 and I put out a request a
few weeks ago to try and find the author of it - if the sources were
available then maybe it could be improved. I suppose I could try and
recreate it from Etherslip but as someones already done it I can't see
the point!!

This is not a flame. Really!

What the hell am I supposed to do with all my 2M and 440 gear?
How many millions of dollars worth of equipment is going to become
unusable by HAM's nationwide? Not to mention, where can I Find cost
effective replacement gear in the 900MHz+ bands that will allow me
to do this 1.5MBPS traffic? How are you going to conveince me and
the rest of the HAM's to re-invest another thousand dollars
in new equipment when you can't be sure the rest of the UHF & above
frequencies will be there next year. If this plan goes through
and 144 & 440 are taken away, it will likely spell the end to
a lot of business and a lot of hams.

73 Andy KC6NMD

[unrelated network data snipped]

>The point is that commercial communications is much more efficient and
>reliable than amateur radio.

That is because we are AMATUERS! Do you know what the word means in an aplication to a hobby?

>It has to be reliable because stockholders
>are demanding that companies make money and in order to make money you
>can't have down time.

Which is NOT the case in amatuer radio.

[snip]

>Commercial interests will be able to provide a better use for this
>spectrum because, as I've pointed out, their applications will be more
>efficient and reliable. Their use of this spectrum will add to the GNP
>and we, as a nation and a world, will be better off.

How ignorant...where do you think new ideas are pioneered from!? Just about every single radio breakthrough since its discovery, has been done by amatuers.

It is also obvious you are talking with your commercial hat on...not you amatuer one. Also, the GNP increase (if it would at all...which I doubt) would be offset from the drop in VHF & UHF amatuer radio sales...which is millions of dollars.

[snip]

>But remember, the pioneering work might be over in the VHF and UHF bands
>but it is just beginning in the higher frequency bands. There is more
>bandwidth up there than both all of our VHF, UHF, and HF bands combined.
>Enough bandwidth that every ham could have a 1.544 MB connection to the
>internet running from his/her home (and wouldn't that beat the heck out of
>the 28.8 KB connection you're using now!)

You assume everybody has the same interest in amatuer radio...high speed data connects...this is a rash assumption by you, and is not true.

>How many of you who oppose the reallocation of these bands are pioneering
>new, worthwhile communications systems? Are you doing anything to advance
>the state of the art or are you just using your $500 dual band mobile as a
>glorified CB radio to chat with your pals?

Again...you are wearing blinders. Some amatuers are VERY HAPPY just using voice to "chat with their pals".

Those who wish to enter the digital/data realm of amatuer radio, may do so...those bands are there. For those who wish to "chat with there pals", those bands are here, but according to you, should be removed for what YOU see fit for amatuer radio...which is very narrow minded of you.

>Please don't look at a reallocation as a threat to
>amateur radio.

And just what would you call it?

>Look at it as the kick in the seat that we all need to get up
>and do something productive with our hobby.

Are you also so small to believe that hobbies have to be productive!? My father's hobby is collecting clocks...hardly "productive" by any means, but still a hobby.

>When it comes right down to it, the people who determine who gets what
>spectrum will be looking at the value received from that spectrum's use.

Wrong...if that were true, the entire amatuer bands would have been gone long ago. We can be thankful that those in charge, do not have your mentality.

>Can you honestly say that our current use of these frequencies justifies
>our keeping them?

Yes...because its a hobby. If your argument is that the bands could be better put to use, the answer is yes...but only as public service use...private commercial use also does NOTHING for the public, hence, your argument is flawed.

[snip]

>So long to my old friends, the 2 meter and 70 cm bands. Hello to the
>exceiting new world of pioneering communications

Those bands are going nowhere. And we can thank people who are not as ignorant and narrowminded, as some who would rather support the commercial zealots, than stand behind their own fellow amatuers.

Those are the hams I would say "So long my old friend" to.

Take care.

>How many millions of dollars worth of equipment is going to become
>unusable by HAM's nationwide?

Oh, boo hoo.. :(Poor guy. I happen to agree with Thor. Ham radio on the 148 and 440 has been technically stagnate (not everyone, i know, i know..) for so long that it isn't any wonder the resources are being reevaluated. Maybe if hams had managed the resources effectivly to begin with maybe we'd have a better argument for keeping them. Take two meters for example. Here on the east coast there is NO WAY you can get a section of spectrum for any new technology or experiments. The whole band is sucked up by 'talking', roger-beep repeaters and 1200 baud packet. If something isn't done, in 20 years, two meters would probably be exactly the same as it is today. New technology developers are already forced to find other bands. From my point of view, 2m is dead already; we just forgot to bury it.

Losing a couple of key bands is hardly the end of amateur radio, but it might be the end of some antiquated obsolete technology. Oh dear, the two meter repeater owner ol' boys club will be forced to contend on a equal footing with the 'new' guys. How nice.

I don't like the idea of having to toss out my 440 or 148 gear any more than anyone else. BUT, before i toss it out, i'll have to see if i can even find it! :)

3A -[Monaco] Ralf, DL3JSW, who is part of the HB0 team listed below,
will travel here during the week on July 14th. He will try to
obtain a license for both 3A and Seborga.
3Y -[Bouvet] Luis, XE1L, (at the Dayton HamVention) reported that the
South Sandwich Island DX Group (SSIDXG) will be going to Bouvet
sometime in December 1997/January 1998. Naturally, this will be a
full scale operation. Details will be forthcoming.
5V -[Togo] From 3 to 18 June Roy, DL7UBA/5V7HR and Lars, DL7ALM/5V7ML
will be active from Kpalime, Togo. The activity will take place on
all bands in SSB and CW.QSL via their respective homecalls.
6Y -[Jamaica] Theo, PA3ERL, will be active as PA3ERL/6Y5 from June
13-29th. His plans for band activity and operations were not
received.QSL via PA3ERL.
9A -[Croatia] On 7 and 8 June, Vito (9A/I3BQC) Enrico (9A/I3RSP) and
Mario (9A/I3CZM) will be active from Susac island (EU-016).
9M0 -[Malaysia] Jan, SM0OEK is currently in Malaysia, from where is
active as 9M2JJ. He hopes to plan an expedition to Pulau Layang
Layang, in the Spratly islands group.
9N -[Nepal] From 23 to 30 June Brad, KV5V will be in Nepal and he will
try to operate from their stations on 20 and 15 metres CW.
BV -[Taiwan] From 31 May to 2 June BO1/JP1RIW will be active from the
```

Ma-tsu islands (AS-113).QSL via BV2KI.
BV -[Taiwan] The activity of BO0KS from Kin-men island (Quemoy,AS-102)
is now planned from 26 to 29 July. QSL via BV2KI.
C6 -[Bahamas] Robert/K4MQG, William/AA4R and Ted/WA4VCC will be going to
the Grand Bahama Island from June 7-14th. They will be active on 6m,
2m, 432cm and HF.The station will be very active during the ARRL
June VHF Contest, June 8-10th. The Grid Square is FL06 and has not
been on VHF for quite sometime.
CU4_iota-[Azores DFP] June 1-2 , CU4S from LightHouse "Farol da Ponta da
Barca" Ref. FAZ-03 on 80,40 and 20 meters.Also on June 21,22,23
CU4N LightHouse "Farol do Carapacho" Ref. FAZ-04 , 80,40 and 20
meters.QSL via CU4AH
CU7_iota-[Azores DFP] June 8 to 9 , CU7R will be QRV from LightHouse "Farol
da Ribeirinha" Ref. FAZ-17. Last May 25-26 CU7V was QRV from "Farol
do Vale Formoso" Ref. : FAZ-18.
DL_iota -[IOTA 033] Frank , DL2SWW will be QRV from Vesterales - IOTA EU-033
from June 16 to July 7 , 160 to 10 meters. QSL via Homecall.
From June 28 to 30 he will try going to the Lofotes - EU 076.
EA_iota -[Spain] In July EA5IQ will be active from Benidorm island (EU-093
DIE E-007)
EA7_iota-[Spain] The new operation from SANCTI PETRI IS. EU-143 and from
Spanish Is. S-002 (DIE) Will be 8-9/6/96. Activate all bands CW and
SSB. The call is ED7SPI and the team : EA7FR-EA7NO-EA7ESH-EA7PY-
EA7BJ-EA7JB. The QSL Info is EA7PY.
EA9_iota-[Ceuta & Mellila] The new date of the dxpedition to ALBORAN ISLAND,
IOTA AF-042, and S-001 for the Spanish Award Island (DIE), will be
of the 14-16/05/96. Will activate in all bands, SSB and CW.The call
is EG9AI and the QSL manager is EA4URE. Ops: EA7CRL - EA7HDQ - EA7KN
EA7AAW - EA7BFT - EA5KY - EA7JB
F_iota -[France] Didier, F6ELE, and Bertrand, F6HKA will be active from
Molene Island IOTA EU-65 (located in the Bretagne -Finistere West-
Region Group) July 25 to 29th.
GM -[Scotland] In early June GM4FDM, GM3NIG, GM3UTQ, GM4YMA and GM3COB
should be operating (10, 15, 20, 40 and 80 metres) from Monach
islands (EU-111), which were activated for the last time in 1993.
Call is still unknown, but it should be GM5VG/P. QSL via GM3UTQ.
HB0 -[Liechtenstein] From 13 to 20 July F6ELE, F1PNA and F6HKA will be
active with two stations (10-160 metres) from Liechtenstein.
HL_iota -[South Korea] This is to inform you IOTA pedition to Bogil Island
Korea (AS-085). The Hanyang University Amateur Radio Club (HL0C)
plans to operate at Bogil Island, Chunnam Provice, Korea.The island
is in IOTA AS-085 group. The date of operation will be 24 thru 26
of June, 1996. HL0C/4 will be used for callsign, and send QSL card
to HL0C direct or via buro. Please add "Amateur Radio Club, HL0C"
to the cba if you send your QSL card direct.
I -[Italy] From 3 to 6 June Giampiero, IG9/IK4NYV will be active from
Lampedusa island (AF-019,IIA AG-001).QSL via IK4PLC (Gianluca
Vidotto, Via Andreini 30, 40026 Imola-BO).
I -[Italy] From 21 to 23 June Tino (ID9/IT9NGN, QSL via bureau to
G4RRA),Maurizio (ID9/IT9HLN, QSL via bureau), Giovanni (ID9/IT9TZZ,

QSL to P.O.Box 213, 98100 Messina-ME, Italy), Daniela (ID9/IW9ELV,
QSL via direct) and Maurizio (ID9/IT9LQG, QSL via bureau) will
be active from Salina island (IIA ME-015), in the Eolie archipelago
(EU-017). Operations will take place in all modes and on all bands.
I -[Italy] The Salento DX Team plans to activate some island in the
Puglia region, Sant'Andrea isl. di Gallipoli (EU091/IIA LE01
24 June - 9 July), Grande isl. di Porto Cesareo (EU091/IIA LE02
22 July - 10 August, including the IOTA contest).
During later operation it's also possible an activity from
Malva isl.(IIA LE03).QSLs via homecalls
IS0 -[Sardinia] From 29 July to 12 August Roberto, IM0/IK2MRZ will be
active in CW and SSB from Sant'Antioco (EU-024 IIA CA-014) and San
Pietro islands (EU-165 CA-013), and also from other Sardinian
islands valid for the Italian Islands Award. QSL via home call.
IS0_iota-[IOTA EU-165] During August , IM0/IK1TKS from some Islands :
San Pietro (IIA CA-013),Piana (IIA CA-008), Ratti (IIA CA-010) and
Calavinagra (IIA CA-019).
KH5 -[Palmira & Jarvis Isl.] Rumors from Hawaii say that a DX'pedition
to Palmyra KH5 and Kingman Reef, KH5k is on the works, For now the
operators are on the planning fase and facing the first problem,
that is to get the very difficult permission to go to Kingman Reef.
SV -[Greece] From 10 June to 30 August SV1CID and SV1DPL will be active
on 10,15,20,40,80 and 160 metres CW/SSB from Crete (SV9, EU-015),
from Ionian islands (SV8,EU-052), from Euboea (SV1 EU-060) and
from Hydra (SV8 EU-075).QSL via SV1CID (Papastratou 42, Agrinio
30100, Greece).
SV5 -[Dodecanese] From 6 to 20 June Manfred, DL8SET will be active again
from Rhodes. Operations are expected to take place from 6 to 20
metres (WARC probably included) in SSB and CW. QSL via homecall.
V6 -[Micronesia] From 25 to 28 May JE7JRZ will be active in all modes
and all bands as V63NN.He plans to participate in the CQWW WPX CW
Contest. QSL via homecall.
VE_iota -[Canada] VE3NSZ will activate the following Provincial Islands
during period 4-10 June:
PQ007 Ile D'Orleons NA128
PQ011 Expo
PQ019 Grande Ile
PQ023 Nuns/Des Soeurs
PQ026 Ile Bigras
NB004 Lameque NA068
NS008 Outer Hirthe
NS012 Tancook NA081
NS040 Heckmans
NS042 Little Tancook
NS043 Marvins
VK4_iota-[Australia] In early June, Steve Salmon, AA6LF should be active as
VK4ALF from Stanley Island or Howick Island. The IOTA status of the
islands, which should be located in the Queensland State (North
Coast) North group (OC-187), is still to be confirmed.QSL via AA6BB.
VK9 -[Willis Isl.] For anybody who is interested .... VK9WG mentioned

this evening that he will be on 3570 KHz at 1100z on June 3, 1996
... so.... anybody who needs/wants Willis Island on that band and
will have propagation to that part of the world might want to give
it a try. He has been spotted on the OH2BUA Packet cluster on the
28th May on 14260 between 05H30utc and 07H00utc.
VU4 -[Andaman] Well known DXer Jim Smith, VK9NS, who at the HamVention
and SWODXA DX Dinner Bandquet, announced he has received his Indian
license which is valid for 5 years.The W.P.C. were kind enough to
issue him VU2JBS which contains his intials. He also mentioned that
he believe the permit to import the equipment being donated by the
Heard Island DX Association (HIDXA) to Mani, VU2JPS, has now been
mailed to his home on Norfolk Island. Jim stated that he plans to
return to the Andamans in July or August of this year subject to
various factors.
ZK1 -[Cook Isl.] The DXNS report Bruce/AA8U, Stan/K8MJZ and Marilyn/AG8W,
will be active July 11-21st.This time frame will include the IARU
Contest. They will operate from Rarotonga Island as ZK1AAU in the
contest and ZK1MJZ and ZK1AGW outside the contest.There will be an
all bands effort with priority on 160 meter outside the contest.
Cushcraft is sponsoring the operation with antennas and equipment.
This group will not join DX nets or lists and requests full calls
only. QSL to AA8U.
ZK2 -[Niue] From 1 to 4 June Yuu Yoshitani,JA3IG will be active as ZK2YY
from Niue. Usually Yuu is active on 40 and 20 metres CW.

=== * VUSHF * ===

/EX

SB DXNEWS @ WW <CT1ENQ $NPDX.019W2
NPDXG Bulletin #19 [2/3]

PACIFIC DXPedition -> Yuu Yoshitani, JA3IG, will be active from three
different islands over the next couple of weeks. Yuu-san will be operating
as follows: May 28-30th as 3D2JA (Fiji), May 30 June 1st as A35IG (Tonga),
June 1-4th as ZK2YY (Niue) and June 5-6th as A35IG (Tonga). Yuu-san likes to
operate mainly 40 and 20 meter CW. Check around 7005 kHz and 14025 kHz.

5A1A ---> On 14 May the DXCC Desk approved all the 5A1A operations. The
activity from Tripoli Radio Club started on 13 July 1995 by a group of
Ukranian amateurs (UT3UX, UT2UA, UT3UY, UX4UMI), who worked until 25 July
(for CWcontacts QSL via LZ2UA: Vlad Vladov, Box 100, 5600 Troyan, Bulgaria;
for SSB QSL via OM3JW: Stefan Horecky, Mnska 2, Stupava, IBV 900 31, Slovak
Republic) About 35,000 QSL are going to be processed and those who have
already sent their requests do not need to send dupes. Those who have
waited for the DXCC Desk's decision before sending their card and/or
donations, can write direct to UT3UY: Anatoly Kirilenko, P.O. Box 494/3,
Kiev-151, 252151 Ukraine. Donations can also be sent to W4BRE.

MOUNT ATHOS ---> The ARRL Membership Services Committee (MSC, a standing committee of the Board of Directors), has received a 9 to 7 recommendation from the DX Advisory Committee (DXAC) to make no change in the status of Mount Athos on the ARRL DXCC Countries List. The Awards Committee reported a unanimous vote to MSC in support of the DXAC to make no change at this time. Since the DXAC and the Awards Committee are in agreement in their recommendations to the MSC, the matter is decided.

PALESTINE UPDATE ---> It may be timely to remind DXers of recent operations in Palestine by the JA1UT/JA3UB group, and to give an update on the current status. The JA1UT/JA3UB group has been involved in Palestine since mid-1994 with a United Nations humanitarian aid project, providing and installing VHF radios in ambulances and hospitals.Several visits have been made in pursuit of the project, and two of them included licensed amateur radio operation. A parallel thrust of the project has been to assist the Palestinians where possible to resume amateur radio activities.Training and equipment has been offered for this purpose. The first step in the resumption of amateur radio was made by a short operation of a Palestinian national Dr Sami Tarazi from the Gaza Strip on 2nd December 1994 using the historic call sign ZC6B. The "Al Quds" local newspaper on 5th December 1994 stated that Chairman Arafat had sanctioned the operation and also approved the formation of the Palestinian Wireless Group. The first operation by the JA1UT/JA3UB group took place between 12-20th December 1994 from the Gaza strip, using the call signs: JA1UT/GAZA, JA3UB/GAZA, JK1KHT/GAZA, JO3XEQ/GAZA. The /GAZA suffix was used because Palestine did not hold a currently valid call-sign allocation.A written permit was issued by the Ministry of Telecommunications and Posts.The second operation by this group took place 14-19 May 1995. The call signs used were: JA1UT/ZC6, JA1UPA/ZC6, JA3UB/ZC6, JO3XEQ/ZC6, JO3XER/ZC6, JH7DHS/ZC6, JR0CGJ/ZC6.
A licence was issued by the Ministry of Telecommunications and Posts of the Palestinian Authority. This stipulated the use of the /ZC6 prefix. The Palestine Authority has licensed a number of nationals for amateur radio using the prefix ZC6. By the way, it is the belief of the JA1UT/JA3UB group, that there are precedents within the DXCC Programme, which indicate that the actual callsign used during an operation is not necessarily a critical factor in the determination of "country" accreditation. Meanwhile, JA1UT was informed by the Palestinian Authorities that they would welcome any radio amateurs, from any country which wished to foster friendly relations with Palestine. A copy of the application form written in Arabic language, with an English language translation was given to JA1UT.In view of the complex political situation concerning Palestine, an informal approach was made to a representative of DXAC at the Tokyo Ham Fair August 1995, sounding out the possibility of a DXAC accreditation. It was made very clear to G3NOM and JA1UT that in the personal opinion of the representative, it would be a long time before DXAC could even consider such an application due to the political complexities concerning the autonomy criteria.
The JA1UT/JA3UB group are planning another visit to Palestine in late June/early July 1996.

ZL8RI ---> The QSL manager for Raoul Island, Kermadec islands operations is ZL2HU: Ken Holdom, P.O. Box 56099, Tawa, Wellington, New Zealand.

2873. CW keyboard Keyer Questions?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-05 00:00:00 UTC
From: Tim Robertson KC7QOM <timr@gorge.net>
Message-ID: <31B5C9FF.4CE6@gorge.net>
Source record: 36666

Hello to All
I am a new Tech plus interested in sending and recieving CW via my computer. Would appreciate any comments and suggestions concerning what is needed, what to look for, and where to get it? Any assistance will be appreciated. Thanks in advance.
73s
Tim, KC7QOM

2874. NOS via Windows IP?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-05 00:00:00 UTC
From: pcb@connix.com
Message-ID: <4p4krp$si6@comet.connix.com>
Source record: 36667

Forgive the question if it has been beaten to death, but I am looking for information on using some of the common Windows-based TCP/IP utilities like Trumpet Winsock to make connections to KA9Q NOS systems via a KISSed packet modem.

Thanks in advance,
Pete, N1QDQ

2875. Suggest TNC

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-05 00:00:00 UTC
From: Rob Swider <rswider@pulsenet.com>
Message-ID: <31B5E574.5AA8@pulsenet.com>
Source record: 36668

I'm planning to buy my first TNC to give packet a try. I'm considering three basic models and would like opinions about which is best. They all price about the same ($120 + or -), so cost isn't an issue. The TNCs are: KPC-3, PK-12 and MFJ-1270. I'm not planning to use it mobile and don't consider battery operation something I absolutely need.

Thanks
73
Rob

>much!
>
>73's, Isaac K.

I'm trying to gather up all the information I have about it, including
the original unedited article (cut down to fit in 73) on a web page. The
first pass at it is at

http://ascension.cit.cornell.edu/pmp.html

The software isn't downloading properly, and the article is not formatted
for HTML yet, but is there. I'm new to web pages, and am looking to get
the information I need to fix this stuff up, but it's that time of year
when outdoor tasks abound. So in my 'copious free time' I'll try to get
everything I have about PMP up and on the page. Just have patience.

> have to play by thier rules.

Jim Cummings' point was that the prohibition (including in the FCC
regulations) is on the exchange of third party traffic between
amateurs. It says absolutely nothing about what the amateur at
the other end does with the message, or about the content other
than the usual amateur restrictions. As a result, I can send third
party traffic that is destined to a country that the U.S. does *not*
have an agreement with as long as I can find one or more
intermediary stations that *do* have third party agreements.
This mechanism has been suggested in the Public Service
Communications Manual of the ARRL.

It still doesn't answer my question of how do I address traffic
destined for a non-amateur in Australia. I'm guessing I need to
check into a traffic net or try an international BBS, although even
then, it is unclear as to whom the traffic is addressed.

^^^^^^^^^^

Where did you come up with "reevaluated?" Tell me when it was announced
that 144 and 440 bands were being "reevaluated." If a company requests access
to 20M does that constitute reevaluation or does it simply indicate a companys
interest in obtaining spectrum regardless of its current use?

> begin with maybe we'd have a better argument for keeping them. Take
> two meters for example. Here on the east coast there is NO WAY you can
> get a section of spectrum for any new technology or experiments. The

I think you are exagerating greatly when you say this, don't you agree?
Where, specifically, "on the east coast" are you? Have you submitted
a request for spectrum on which to do some experiments?

> probably be exactly the same as it is today. New technology developers
> are already forced to find other bands. From my point of view, 2m is

> it might be the end of some antiquated obsolete technology. Oh dear,
> the two meter repeater owner ol' boys club will be forced to contend
> on a equal footing with the 'new' guys. How nice.

It may not be the end of HAM radio today, but why would I (or others) re-invest
money for new equipment to use on bands that ALSO have a chance of being
taken over to be used by "new technology" ((read: money makers)).
I don't think the issue has been the lack of new technology on the bands as much
as it has to do with profit & greed. If 144 and 440 are taken down, it would

be a piece of cake to get the rest of the VHF/UHF bands as they are so under-populated now that its almost a miracle that HAM's still have access to them.

> I don't like the idea of having to toss out my 440 or 148 gear any
> more than anyone else. BUT, before i toss it out, i'll have to see if
> i can even find it! :)
>
> -be

Yeah, right. So, you're ONE guy that doesn't use equipment that you bought (which seems pretty stupid on the surface but I'm sure there are others out there that like to buy stuff to fill closets). So, it follows that because you personally don't care that a great many other HAM's will suffer a significant financial loss when their equipment becomes virtually useless than it really doesn't matter at all. Right?

Good of you to look at this realistically.

Andy KC6NMD

: >The point is that commercial communications is much more efficient and
: >reliable than amateur radio.
:
: That is because we are AMATUERS! Do you know what the word means in an
: aplication to a hobby?

Just because we're considered 'amateurs' doesn't mean that we have to
waste the bands away with old technology and operate so inefficiently.
We are also experimenters and should be the ones pioneering technology.
If ham radio were to freeze (it pretty much has the past decade or so)
and no longer develop and progress, then the only reason to be in it
would be to just chat with others and no longer experiment. There already
is a band for that, it's called CB.

I don't want to see the bands get taken away anymore than anyone else,
but if it does then it'll get better use than it does now. I've slowly
been getting out of the hobby again, the first time was because of
high school (cars and girls were more important than ham radio :) and
this time it's because of the lack of any fast technical development.
Computers, the Internet, ISDN, etc... killed it for me. I went from
attempting to improve the hobby (was virtually run out by those who
wouldn't change) to only getting on the air every once in a while to
ask someone 'where are you?'. I'm planning on this Field Day to be my
last for a few years, or until some new exciting technology comes up
that sparks my interest (packet got me back in last time). I'll still
get on the air every now and then, but only to ragchew.

: >Commercial interests will be able to provide a better use for this

:
: How ignorant...where do you think new ideas are pioneered from!? Just about
: every single radio breakthrough since its discovery, has been done by amatuers.

Not really. In many cases it's at schools or businesses. Then hams see it
and copy it. In some cases we did pioneer it, but in most cases we did not.

: >glorified CB radio to chat with your pals?
:
: Again...you are wearing blinders. Some amatuers are VERY HAPPY just using voice
: to "chat with their pals".

Agreed, but you can only support the lowest common denominator for so long.
Sometimes you have to say 'step aside' for progress. Voice is just about
everywhere, it's the new modes that are always struggling to find that
bit of spectrum where they can operate on.

2880. Problems PK232 + PPWIN

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-05 00:00:00 UTC

Sure, you're wrong. There are hams running networks now at 56 kilobaud.

So what? Who says that all spectrum must be used to make the most
profit?

> Commercial interests will be able to provide a better use for this
> spectrum because, as I've pointed out, their applications will be more
> efficient and reliable. Their use of this spectrum will add to the GNP

Better use? Merely making something more efficient doesn't make it any
better, neither does ignoring the communications already taking place on
144-148 and 430-450 MHz bands. Including amateur satellite, packet,
repeaters, etc.

>

There's plenty of pioneering left to be done. The current 56 kbaud UHF
systems will go faster, no doubt, building on the technology of today.

Speaking as our town's emergency communications coordinator, I'm going
to place very LITTLE confidence in any system as subject to overload as
cellular telephones. Even moderate problems cause serious overloads, and
the likliehood that the cellular system will be up after a major
earthquake is rapidly approaching zero. I'll use it if it's up, but
I'm going to use all the communications resources I have at my disposal,
including Amateur Radio.

It's simply not true that the alternatives you mention are always better
suited for the task AND more readily available. It depends on what the
task is, and among other things, how much it costs. It's no use touting
a technological solution if the political situation dictates that there
simply isn't any way to afford it.

2883. Advise/Help with TNC 2

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-05 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <96060522394734@atdbbs.com>
Source record: 36676

>>...MFJ-1270...to HTX-202...

Taken off ATTENTION to Details BBS at 909-681-6221:

I have recently taken the opportunity to observe electromagnetic compatibility of the MFJ-1270B as used by several of our NET/ROM nodes. (some of this may apply to other brands also.) T4e initial esults were not as good as they should have been. The question was 'Do the TNC's cause interference to co-located sensitive VHF receivers ?' The answer is YES, depending on the situation.

In two different sites measured, the noise coming from the TNC was sufficient to cause 4-7 db worth of desense to a 0.2 uv (12 db SINAD) receiver (145.01). There are two types of noise that are that radiate from the MFJ-1270B. One type is broadband in nature (probably due to data/address bus activity and DC-DC converter operation) the other kind is harmonics from the crystal oscillator and sub-multiples thereof ((4.9152/2) * 59 = 144.998 MHz). The broadband noise can cause interference on all frequencies if a sufficiently sensitive receiver in a quiet location is involved. The harmonic energy can cause problem on specific frequencies.

This interference is detrimental to the weak singals that serveral of our nodes are required to operate with. In addition it may cause problem to the communications of our hosts whenwe share a commercial site.

It is relatively easy to determine if you have a harmonic problem because the receiver noise will quiet when the TNC is turned on. The broadband noise usually can not be heard unless you observe the noise level in the presence of a weak signal. (With the normal antenna connect, inject a signal that provides 10 db of quieting then turn on the TNC and observe the change in noise level. If you have a 0.5 uv receiver or are in an otherwise noisy location you may not be affected. With a 0.2 uv receiver you may lose 6 db of quieting.)

CLEANING UP THE MFJ-1270B

Sufficient reduction in the energy emitted by the 1270B can be had with some relatively simple modifications to the 1270B. These modifications should reduce the broadband noise level to a insignificant level for most sites. Harmonics that cause problems to specific frequency can usually be moved far enough off frequency by 'rubbering' the crystal with the trimmer in the TNC.

1. Scrape the paint from the inside of the cover and the outside of the chassis near the four screws that hold the cover on.

2. Remove the circuit board from the chassis and scrape the paint from the top of the four posts that hold the circuit board.

3. Add a low inductance strap from the mounting hole near the power switch to the ground trace at the edge of the circuit card. (The bottom side of the card works the best.)

4. On the bottom side of the card add a 'small' 0.001 uf capacitor from each of the four active pins on the DIN connector to the ground foil immediately adjacent.

5. Add a ground strap from the foil on the bottom side of the card under the DIN connector. The ground end of this strap can be left dangling until the card is reinstalled and then looped to the outside of the chassis and grounded with a small self tapping screw on the lip just below the DIN connector.

If you are at a shared site, you owe it to the other services to be a good neighbor.

> aplication to a hobby?

I know what it means. What it does not mean is that we, as amateurs, need
to use outdated technology and hog valuable spectrum to "chew the rag".
Amateur means not for profit, it does not mean sloppy, outdated,
unreliable, inefficeint, etc.

>
> >It has to be reliable because stockholders
> >are demanding that companies make money and in order to make money you
> >can't have down time.
>
> Which is NOT the case in amatuer radio.
>

Right! So you must have seen my point that the commercial service
providers have motive (making money) to provide reliable and efficient
systems and that we as amateurs have little motive (other than the
goodness of our hearts and that seems to be a motive in short supply) to
provide anything reliable or efficient.

about
> every single radio breakthrough since its discovery, has been done by
amatuers.

Ignorant? Well, ok, I guess I must be because I can't think of any major
breakthrough in the last couple of decades that was pioneered by amateurs

on amateur frequencies. Cellular.....nope. SS....guess not. Digital multiplex technology.....not that. Surely SSB was! Wrong again! How about FM, the most common mode in use by hams today? Shucks, it wasn't either. Ok, you've got me stumped....I must be ignorant about that....please enlighten me because it seems to me that the bulk of the discoveries in radio have come from commercial or military interests.

If we assume for a moment that you are correct, why is the bulk of amateur traffic carried by outdated modes such as CW, SSB, and wideband FM in simplex or half duplex operation? If hams are pushing the envelope in advancing the state of the radio art then why is it that we aren't so valued by the decision makers like the FCC? You're right, I just don't get it. Do tell.

>

>
>
No, just my common sense hat. It is true that there are some people out there making money selling those radios but compare that to amount of pagers sold in the same time period. Or cell phones. Or microwave carrier systems. Or satellite TV receivers. Do you really that amateur radio sales come close to the dollars turned in the commercial industry? I will admit that I don't know the dollar amounts but I'll bet that commercial radio contributes to the GNP over amateur radio sales better than 20:1 even if you don't include service revenue. I think we're talking billions compared to millions!

> You assume everybody has the same interest in amatuer radio...high speed data
> connects...this is a rash assumption by you, and is not true.

No, I don't assume that at all. I know there are those who prefer public service to the technical side. I know that there are those who prefer to chew the rag as opposed to sending JPG files via digital radio. I am just

saying that their mode of operations (CW, SSB, FM, AM, slow speed CDMA 1200 baud packet) are not appropriate to the time and circumstances. There is no reason in this day and age that our amateur conversations aren't digitized and transported via modern digital methods which would conserve spectrum. When I lived in Las Vegas I think we had more than 20 VHF repeaters that you could hit with an HT. Those same repeaters could have used digital methods instead of analog FM and taken up a fraction of the specturm. Do you see the point now?

>
> >How many of you who oppose the reallocation of these bands are pioneering

>
> Again...you are wearing blinders. Some amatuers are VERY HAPPY just using voice
> to "chat with their pals".

And more power to them. But they won't have the bandwidth to do it much longer if they don't fight for it by conserving spectrum and showing, to those who make the decisions, that they deserve their valuable chunk of spectrum. Chew the rag all you want but the fact remains that the decision of who gets what spectrum is ultimately decided by non hams who are out to make a profit. Not that I like it but that's the fact and you can't change it by ignoring it.

>
> Those who wish to enter the digital/data realm of amatuer radio, may do

> >Look at it as the kick in the seat that we all need to get up
> >and do something productive with our hobby.
>
> Are you also so small to believe that hobbies have to be productive!? My

> father's hobby is collecting clocks...hardly "productive" by any means, but

> still a hobby.

I see your point. But by being a collector of clocks your father, I'm sure, hopes that his hobby will produce a collection. Hanging a clock on the wall doesn't make him a collector. To be a collector he has to get off his duff and go find some clocks does he not? If he sits around in his easy chair polishing his one clock, do more clocks come to him? By just sitting in your easy chair talking it up on 2 meters do you contribute anything to your hobby but blowing wind? I just figure that we hams have to do something as a part of our hobby to add to our collection of frequencies. Just chewing the rag isn't going to impress the powers that be enough to convince them to gain or keep our spectrum. What's the point in having a hobby if you don't care to take the time and effort to do it right?
>
> >When it comes right down to it, the people who determine who gets what
> >spectrum will be looking at the value received from that spectrum's use.
>
> Wrong...if that were true, the entire amatuer bands would have been gone long
> ago. We can be thankful that those in charge, do not have your mentality.

If you think they don't you are sadly mistaken. Look at our history. Long ago, before my time and yours, the amateur community was moved entirely to bands deemed useless by the regulating powers. They did that because commercial interests wanted all the spectrum deemed valuable to make a profit. The amateur community rebounded by proving that those "useless wavelenghts" were useful afterall because they pioneered and developed technologies to make those bands worthwhile. And that's the whole point of this is that we need to do that again instead of whining when our bands are taken away. We whined a lot when 11 meters went. We whined a little when we lost a chunk of 220. When the 900 MHz bands got juggled around the amateur community didn't even scratch their butts.
>
> >Can you honestly say that our current use of these frequencies justifies

>
> Yes...because its a hobby. If your argument is that the bands could be better
> put to use, the answer is yes...but only as public service use...private

> commercial use also does NOTHING for the public, hence, your argument is

> flawed.
>
>
Tell that to the capitalists who control the spectrum that our hobby occupies.

If you don't think that private commercial use contributes to the public, then explain to me why it exists! Day after day, year after year, commercial systems provide public service for a fee. People are willing to pay for that! It amazes me but it's true. Private systems get jobs done and people are willing to pay for that. That doesn't amaze me at all....it's a no brainer. Chewing the rag on amateur radio or CB does little for the public and very few people pay very few monetary units (compared to commercial public and private systems) for the ability to do so.

> >So long to my old friends, the 2 meter and 70 cm bands. Hello to the
> >exceiting new world of pioneering communications

I know which side of the bread is buttered. I also know the sad but true fact that he who has the most money tends to win. You can't honestly think that things can remain the same and we'll keep these bands forever. History has shown that it just doesn't work that way. With your attitude you'll be with the spark gap diehards wondering where all the bands went while the rest of us here in reality will be enjoying a more modern, renewed, and refreshed hobby, be it on 2 meters or another band.

> Those bands are going nowhere. And we can thank people who are not as ignorant

>
> Take care.
>
>

Thanks for taking the time to reply Christopher. Very few hams in this day and age care enough about the hobby to get involved in something as simple as a discussion about these things. That is why our hobby is in trouble today.

Hello Chris,

Thought maybe I would step in and give my 2 cents worth! I would hate to be caught up in "FLAME" bait, but its worth the risk to show support for someone, who try to reason with an individual who seems to have his head in the sand :->.

Good job. I too, would hate to see the 2m and 440 Mhz band be reallocated. Let me give an example how these bands are being used in South Alabama.

We have a wide area network that services the whole state of Alabama, northwest Florida, and southeast Mississippi. There are 2 meter repeater sites located throughout the area that are connected by a 440 Mhz terrestial backbone.

This system works so well, that individuals in Mobile (and elsewhere) can use their handheld two meter radios, to communicate with anybody within range of the network (Because of elevated terrain, southern Tennessee and west Georgia can use the system abeit 50 watts).

With this system, we provide skywarn support to the National Weather Service Office in Mobile, AL. I know what you are thinking! But SKYWARN doesn't need amateur radio, and it is not what you would call life saving.

On the contrary, During the spring storm season and the Hurricane season, our efforts were greatly needed and appreciated. We helped with the implementation of the WS-88R Doppler Radar system, by providing near instantaneous feedback from spotters and comparing what they were seeing, to what was on the radar screen. And we relayed "vital" storm warnings to the affected areas (areas not covered by the NOAA radio network).

Also, we provided tacticle support for both Hurricane Erin and Opal that ravaged the Gulf Coast this year. In fact, the Emergency Net that I and and a friend of mine operate received certificates of appreciation from both the National Weather Service and the Mobile Chapter of the Red Cross.

When told that our spectrum was threaten, the individuals at both the Weather Service and the Red Cross showed serious concerned, since no

other group of individuals have been able to provide such a high level of support that amateur radio has.

Not to say it hasn't been competed against! Local cellular phone companies was pushing their own system as a means for spotters to call in to local news rooms and report sightings of bad weather. In addition to being an obvious ploy to boost ratings of television news and make money for the cellular phone company, this "commercial" method proved slow and unreliable,

Since the system is designed for point-to-point communications, and because of the limited capacity of the phone network, the cellular phone system fell victom to the surge of traffic on their net. In fact, during both Hurricane Erin & Opal, the news media was begging the public to not use their cellular phones because of the congestion.

As you can see, amateur radio still plays a VERY important role in public safety. And if people want to have friendly chats with other Hams, I see nothing wrong with their method of testing and maintaining their stations. :->

As a side note: The cellular phone system is still unproven as a means for emergency communication during a natural disaster, yet the continued sales of phone units to consumers hasn't hurt their bottom line. So much, for the theory of stock holders ensuring the efficient use of a valuable resource!

73,
Bill

Source record: 36680

Originally,. I'd figured the one big reason to keep (at least one of) the 2M and 440MHz bands was because of the ham's role in an emergency; sure, some folks have cellular, etc, but at least when the hurricane tore apart south Florida, there were just as many hams out there providing communications. Then I read this:

In article <4p5413$538@cwis-20.wayne.edu>,
Ron Atkinson <n8fow@wireless.org> wrote:
>Just because we're considered 'amateurs' doesn't mean that we have to
>waste the bands away with old technology and operate so inefficiently.
>We are also experimenters and should be the ones pioneering technology.
>If ham radio were to freeze (it pretty much has the past decade or so)
>and no longer develop and progress, then the only reason to be in it
>would be to just chat with others and no longer experiment. There already
>is a band for that, it's called CB.

...and I realized there was another good reason to keep these bands: Okay, so you're experimenting with something, say, an ultra-low bandwidth way to send amateur TV or whatever. You're on one end of the county. Someone else is on the other end with hsi videocamera and his transmitter. And you're getting nothing.

Now, admittedly, you could just pick up the phone to troubleshoot. But part of the idea of radio is you're not required to be where a cable can get to you. Seems to me that having quick-and-dirty voice commo would be a good thing...

I RECEIVED THE FOLLOWING FROM ANOTHER LISTSERVER REGARDING THE PROPOSED REALLOCATION OF 144-148 AND 420-450 MHZ BANDS TO THE COMMERCIAL MOBILE SATELLITE SERVICES:

* * * *

The following letter was received from the FCC today. I am releasing it to
the amateur community since I believe it to be of general interest. It concerns the recent publicity about consideration being given by a WRC-97 Industry Advisory Committee to future use of the 144-148 and 420-450 MHz bands for commercial low-earth orbiting (LEO) satellites. I feel it would
be advantageous to give this information the widest possible distribution,
therefore you may redistribute it without limitation.

Federal Communications Commission
Washington, DC
International Bureau
Satellite and Radiocommunication Division
Room 500, 2000 M Street, N.W.
Washington, DC 20554

June 5, 1996

The W5YI Group, Inc.
Fred Maia, W5YI - Editor
P.O. Box 565101
Dallas, TX 75356

Dear mr. Maia:

In recent days, over 1,000 members of the Amateur Radio community have contacted me regarding the upcoming 1997 World Radiocommunication Conference in Geneva and expressed strong concern that U.S. proposals will
impact adversely on spectrum allocated for Amateur bands. My purpose in writing to you is to respond to these concerns and to provide you with additional information regarding the WRC-97 prepatory process and its relation to existing services.
Many of the comments I received have focused on a list of "candidate" frequency bands discussed at the May 7 meeting of the WRC-97 preparatory Industry Advisory Working Committee Informal Working Group 2A

(IWG-2A). The comments suggest that the Amateur Radio Service bands, specifically the 144-148 and 420-450 MHz bands, have been targeted as a source of spectrum for future Mobile Satellite Service (MSS) operations.
First, I want to assure the amateur radio community that no amateur bands have been selected for reallocation. The list of bands generated on May 7th represent only the IWG-2A's initial efforts to study spectrum use below 1 GHz in order to assess the feasibility of proposing world-wide MSS allocations in that range. Before recommending preliminary proposals for consideration by the Commission, IWG-2A participants must first conduct sharing studies among a range of services using frequencies below 1 GHz. These studies are necessary in order to determine the feasibility of sharing between services, and whether recommending any specific frequency band will be fruitful.
Second, the bands listed reflect only the initial component of a long-term effort to conduct sharing studies before submitting the Committee's proposals to the Commission for review. We intend to conduct sharing studies in bands currently occupied by government and non-government users. In any case, I want to emphasize that the survey on spectrum use is an international matter which involves all frequencies below 1 GHz.
Finally, the current WRC-97 preparatory process, as in years past, operates under a Congressional statute designed to encourage maximum participation by all interested parties. Therefore, all written and electronic comments received at the Commission to date by Amateur Radio operators have been included as part of the public record on WRC-97 proceedings. However, in the interest of efficiency, we have created a designated FCC office and e-mail site to channel future WRC-97 comments directly to the WRC-97 Committee Chairs. I have included our lastest Public Notice outlining these changes and urge you to share it with your members.
I appreciate the many valuable contributions the amateur radio community has made to the progress of radio technology and to ensuring the safety of the American public. I look forward to working with you so that we can continue to advance the use of exciting telecommunications technology both in thge U.S. and abroad.

Sincerely
s/ Cecily C. Holiday
Director, WRC-97 Preparatory Team

Enclosure

Federal Communications Cpommission
Public Notice - June 6, 1996

PROCEDURES FOR SUBMITTING COMMENTS TO THE WRC-97 ADVISORY COMMITTEE

On March 14, 1996, the Committee released Public Notice (No. 61997) (Streamling Notice), that announced its new streamlined World Radiocommunications Conference (WRC) preparatory process. Under this new process, formal Notice of Inquiry (NOI) proceedings are eliminated in favor
of developing WRC proposals in the Commission's WRC-97 Advisory Comnmittee.
This removes the redundancy that was inherent in our previous "NOI-WRC Advisory Committee" process and enables the United States to respond more effectively to the rapidly evolving international environment and to the ITU's new two-year WRC schedule.

The Streamling Notice included general guidelines for submission of public
comments to the Advisory Committee. The Notice states that procedures would
be developed to ensure that members of the public continue to have full opportunity to participate in the development of WRC proposals under the new
streamlined process, including those parties who do not attend meetings of
the Advisory Committee and IWGs.

Since the release of the Streamlining Notice, we have gained experience with
our new process. We now provide these procedures for submitting comments to
the Advisory Committee.

* Comments on Ongoing Advisory Committee Matters: Parties who wish to comment on the ongoing deliberations of the Advisory Committee and its IWGs
may do so at any time.

* Comments on Preliminary Proposals: As announced in the Streamlining Notice, preliminary WRC proposals developed by the Advisory Committee will
be released by the Commission in periodic Public Notices. These Public Notices will allow an opportunity for public comment and will provide the appropriate procedures, such as filing deadlines, to be followed.

In either case, parties wishing their comments to be considered directly by
the appropriate Advisory Conmmittee group and to become part of the Advisory

Committee's public record should submit their comments in writing to Office
of the Secretary, Federal Communications Commission, Washington, DC 20554,
or by e-mail at "wrc97@fcc.gov." Commenters are requested to file an original plus one copy.

The comment should reference the Advisiory Committee public record file number "Reference No. ISP-96-005" and the appropriate Advisory Committee Informal Working Group, if known, in which their submission should be considered. The FCC staff will ensure that comments filed are considered in
the appropriate groups.

For the most expeditious and efficient consideration of their comments, parties should refrain from filing comments directly with the Chair of the
WRC-97 Advisory committee, with the Chairs and Vice Chairs of the Informal
Worling Groups, with individual FCC staff members or private sector participants in the Advisory Committee process.

For additional information, contact Cecily C. Holiday, Federal officer of the WRC-97 Advisory Committee, or Damon C. Ladson, Alternate Federal Officer
at (202) 418-0749, or consult the WRC-97 Homepage on the Inbternet (http://www.fcc.gov/ib/wrc97/)

--------------------End of Public Notice------------

Thanks for reading this:

I want to connect a PSK-1T to an AEA PK-900. Pacomm
says it isn't possible, but I'm sure that hasn't stopped
everyone. If anyone has gotten this combination to work,
please email with the details.

Many Thanks in advance,
David - AB5PI

Personally all the people like you must have interest in the leos to
feel like the amateur ranks have been stagnant. I really think the
amateur community as a whole is not stagnant as you say but very
progressive. But you have your ideas and by the way just what the hell
is your amateur call. And if you don't have one what are you do
discussing anything about the amateur ranks. I think that the majority
of us are sick and tired of the commercial companies trying to drive
us out. Also the next time you need emergency communications pick up
your dead cellphone or lister to the radio station that is off the air
for help on things...Bill Wright ka9dsa and yes I have a call...

Source record: 36689

Still searching for a shareware packet logging program to use for Field Day.
I need one to use on a 286 laptop running DOS (no WINDOWS prg pls).
So far, out of two evaluated they don't seem to be able to make contacts and log at the same time. Their purpose seems solely oriented to CW contacts. We want to make packet contacts and log at the same time. If you know of anything or if you know how to make N6TR or Eazyterm (for Windows) work in this mode, pls contact me.

TIA and good luck to all in both field day and the fight for 2M & 70cm bands!

>the World.

It has come to my attention that the IWG-2A is preparing draft US
proposals for the 1997 World Radiocommunication Conference. It has
further come to my attention that the IWG-2A has before it a list of
''candidate bands'' for low-earth orbit mobile satellites (''little
LEOs'') that includes, among a number of others suggested for
consideration, the 144 and 420 MHz bands, that is, the 2 meter and 70
cm bands currently allocated to the Amateur Radio Service. The fact
that these bands are even being considered is outrageous in the
extreme. Although it might appear, at first blush, that these
frequencies might serve the LEO service well, there are a number of
reasons why it is the best interest of the IWG-2A to look elsewhere:

1) These are the most heavily used bands in the Amateur service used
by nearly all of the approximately 700,000 US amateurs as well as the
10 million operators world-wide;

2) In addition to normal voice communications, these frequencies
already house a gigantic international digital packet radio network
similar to the Internet;

3) These frequencies serve the internationally acclaimed amateur
satellite service and as such are used by a plethora of satellites
funded by common citizens donating millions of dollars toward their
construction and deployment;

4) These bands are heavily used by a number of public service
organizations including:

- ARES, the Amateur Radio Emergency Service,

- RACES, The Radio Amateur Civil Emergency Service which is
coordinated through state and local disaster relief organizations,

- MARS, the Military Affiliate Radio Service which provides familial communications for hundreds of thousand of US service personnel and coordinates with the military during communications emergencies and

- Handi-Hams, and agency that providing technical education for handicapped citizens. Indeed the preceding only scratches the surface of educational and public service activities that are conducted on these bands—these range from the coordination of the Boston Marathon to local astronomy networks.

Please understand that if this proposed reallocation were to occur, millions of individuals would see the value of their property reduced to nothing. While the reallocation of these bands to little LEO service would entail horrendous problems for millions of citizens, it would be unmanageable by industry as well. The public outcry against this action will clearly be felt by congress. Right now, hundreds of thousands of letters similar to this one are arriving at the FCC as well as all congressional delegations. The clout of even a well-heeled industry group such as yours cannot hope to compete with the pressure brought to bear by hundreds of thousands of concerned voters. For you, this could only be an exercise in frustration. It is clearly in your best interest to look elsewhere.

Please do the industry as well as the American public a favor and make sure that the amateur 2 meter and 70 centimeter bands are excluded from consideration for reallocation to little LEO service.

AmSoft announces the June 1996 release of its CD-ROM "The World of
Ham Radio". This CD-ROM contains the World's largest collection
of amateur radio, electronic, and engineering software, plus the
most recent FCC amateur radio license database available on CD-ROM.
The current FCC database includes calls issued up to 22 April 1996.
This software collection is the best available anywhere in the World
for electronics, engineering, and the hobby of Amateur Radio. Over
20,000 files and programs for the hobbyist or professional. Stop
by our WWW SITE: http://hamster.ivey.uwo.ca:80/~amsoft/ and see.

At $19.00 plus $4.00 Shipping anywhere in the World AmSoft has the
lowest price for any CD-ROM offering these services.

2901. BPQ on HF?

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-06 00:00:00 UTC
From: SKORIC@uns.ns.ac.YU
Message-ID: <960607002219.3387@uns.ns.ac.yu>
Source record: 36694

Hello folks,

Here you have a couple of questions to answer. Tnx in advance!

1. I run FBB5.15c software on PC286 clone, TNC2S/WA8DED, FT-7B and dipole for 20m only. It works ok. In the TNC I also have TAPR firmware. For years I ran the software on VHF too. Beside the DED host mode, I ran TAPR + KISS mode with BPQ4.07a switch. On VHF everything was fine with BPQ, but now on HF a strange thing happens: the TNC usualy tries to go sending even there is signal on receive (DCD lite is on). In DED host mode is ok. I used the same BPQ configuration for HF as it was on VHF. Is there any solution to solve this problem?

2. I plan to install another HF port on 20m too. Wonder if it is possible to run 2 HF rigs simultanously on the same band (of course, not on the same qrg)? May I expect some RFI problems in that case? How much should two antennas to be separated to avoid troubles? Finally, is it better in that case to use separate COM ports, or the existing one with a diode matrix? At the moment, I have only one (COM1) port for TNC and internal phone modem defined as COM4 for link to another FBB bbs that is running on VHF.

3. I also plan to install TheNet firmware, instead of TAPR/KISS, if both previous problems are solved... and to have an HF-HF gateway, for example. Where is BPQ better in use: in NETROM mode or in KISS mode?

4. I've read somewhere that has been produced node software intended for protected backbone applications and equipped with a "positive" list up to 4 stations that are allowed to connect FROM that node. A non-listed station may connect to it, but is not allowed to connect FROM it, short of disconnecting. We in YU may find such firmware very interesting to protect some overloaded nodes for the safe forwarding on VHF, for example. I need more info about.

Hope to get some advices... you don't need to answer all questions, hi!

Hmmmmmmm, guess he really doesn't get around much do he. How about the 19k2 links here in Dayton put up by the crew at the Miami Valley FM Association that links Cinci and Columbus with Dayton on 440?????? Or the higher speed links in the 900 meg band that are on the drawing board?? Of course without the amateur community having access to those bands in the future links like that will be a thing of the past and the money gubbing commercialists will have everyone under their thumbs, it'll be pay up or shut up if the "amateur" wishes to build a better "mouse trap"

Anyone with the attitude of this bozo doesn't deserve the ham bands any way I guess.

All else being equal I would suggest the KPC-3. Having used Paccomm,
MFJ, and Kantronics units, the KPC-3 is the one i stuck with. Also,
look for a used KAM if you think that HF modes are something that you
might want to do. You can often find non-KAM-plus units with pretty
recent ROMs for about $150. Basically, it's a KPC-3 and a great HF
multimode in one box.

> Sure, you're wrong. There are hams running networks now at 56 kilobaud.

Yes, but that is slow by today's communications standards. And how much
of that network traffic is composed of voice, video, or fax? Most of that
network traffic is still only data and is distributed to/from the end user
as 1200 baud half duplex AX25 packet. These 56 kbaud networks you speak
of are the cutting edge of amateur technology while the commercial guys
are handling networks at far greater speed and using it to transport
voice, fax, video, as well as data.
> >

>
> So what? Who says that all spectrum must be used to make the most
> profit?
The powers that be say so....sorry but he who has the most money wins.
Unfortunatly so. I don't like it any more than you do but that's the way
it seems to work. Wasn't that the agrument they used to take away that
chunk of 220 MHz? The current trend used to decide who gets what spectrum
is to auction it off and if you had been paying attention you would know
that the PCS and 900 MHz auctions brought in way too much money for the
government, who is in need of cash, to ignore. Hams just won't be able to
compete in that kind of arena.

True, but how do you think the regulatory and commercial interests are going to view that? They just don't see things in those kinds of terms when there is a potential to make lots of $$.

> There's plenty of pioneering left to be done. The current 56 kbaud UHF
> systems will go faster, no doubt, building on the technology of today.

True but those of us who also work on the commercial side have been there and done that. The kind of pioneering I'm talking about is comming up with new technologies, methods of self regulation, etc. that will set the example. We should be among the leaders, as it was many decades ago.

> simply isn't any way to afford it.

As emergency coordinatior don't you want as many people out there to have some way to communicate? A mix of cellular, SMR, LMR, PCS and amateur radio provide that. Since John Q. Public isn't interested in getting a ham radio license and spending $500 for a radio he is more likely to obtain a cellular phone for less money....without any prompting from you. As the cellular and PCS services grow they are adding trunks to their sites to block fewer calls. As an excersise you could have a drill where you have an unannounced mock disaster of some sort. Wait and see who reports it first and the method they use.

I'm not saying that amateur doesn't play a role, just that hams tend to overrate that role. If you stop and think about it, and think about every amateur system you know of, how many have standby batteries with generator systems, backup antenna systems, hot standby radios, and telemetry so the site operator will know the instant something goes wrong? Not many amateur sites do for obvious reasons yet those are minimum requirements for most commercial sites I work on. So when you make a disaster plan you need to have that information in the back of your mind. Sure, hams can come out and set up some HF for you, and they make great operators, etc., etc. but the bulk of your traffic will almost always be via other services.
>
>
> They're going to be around as ham bands long after you're a silent key,

> my friend.
>
I don't deny that possibility. But i think that there is a very real chance that they won't be. Just don't be supprised. How many were shocked when other chunks of spectrum got reallocated? I for one was in a total state of disbelief when we lost spectrum to UPS. I couldn't believe that the world worked that way, it wasn't fair, they didn't really mean it did they? But they did, so don't you be supprised if we start losing more because we didn't do anything to prevent it.

Source record: 36609

I notice that the AEA DSP-232 uses a 12.3 mhz DSP chip while the SCS and Paccomm PTC-II uses a 50 mhz DSP chip. Will the DSP-232 handle a full blown implementation of pactor-II or will they have to trade off performance for a cheaper system?

This is what happened when a number of manufactures implemented pactor-I without the digital-to-analog converter. The trade-off is not necessarily bad, but the manufacture's should make it clear that they have not remained completely faithful to the original specifications.

Source record: 36612

Folks, I have no problem with people wanting to debate the "band threat" issue or the "cw" issue or what ever subject they want to argue about, but why debate these topics in the Ham-Digital group? At one point I subscribed to some other groups in which such debates were welcomed. I, for one, grew weary of the endless flame, counter-flame nature of the groups and dropped them. It is dissappointing to download this group and find that half of the messages have almost nothing to do with "Ham-Digital."

Aside from the distant connection that most packet takes place on 2M and that cw is the origional form of digital communications these messages are missing the whole point of this group. They are not discussing various aspects of digital communications at all, they are mainly centered on well worn arguments.

If you want to debate, I recommend you check out these groups: alt.ham-radio.nocode, alt.ham-radio.morse, and alt.ham-radio.flame.

If I am the only one who is weary of all this, I apologize to the rest of the group. I shall grin and bear it. Otherwise, I would like to see those who are really interested in ham-digital communications take our group back.

Thanks to everyone who informed me that there really are high and medium speed networks running on the amateur bands.

Since my origional post I have learned a lot about said links but one bit of information does not seem to be available.

Please inform me as to how many voice and data channels are running on those networks. I am curious as to the ratio. Are you using commercial multiplex equipment for it or homebrew and if homebrew I would love to know more details.

I am also curious as to how and where the end user's audio is digitized for the network. Are the end users using special digital mobile radios or are you using conventional repeaters and digitizing the audio at the repeater and then multiplexing it onto your network.

Thanks for any information

Source record: 36615

(The following are solely my opinions and not those of my employer -
Andrew Jonathan Fine, WA2JAZ)

TWIMC,

I've been interested in helping people with serious mental disabilities get started in amateur radio, but I've met a distinct lack of interest as far as learning theory is concerned.

They're pretty enthusiastic as far as the Morse Code is concerned though. One person I know, from a long time ago, really liked the idea of sending messages over a flashlight. When I told him that there was a whole world of people who used radio this way to talk to each other, he really lit up. But then his face fell when I told him that he would have to pass a written test.

Here's my idea. It is called the Amateur Basic Class License. It would require only the 5 word per minute Morse Code element, no theory. It would provide a complementary entry path to the current No-Code Technician, which requires a theory element but no Morse.

The Basic Class License would authorize use of the 80 Meter CW Novice segment only, same power limit as Novice. No other bands permitted.

I think that a simple, restricted taste of amateur radio could be most theraputic to a class of very enthusiastic people who could not be amateurs otherwise. And in my humble opinion, the one thing that distinguishes an amateur operator from a casual user of spectrum is the use of Morse code.

Opinions?

Hi Folks !

I've seen a few postings go by here regarding SSTV using the
computer's sound card, so I thought I'd make *one* announcement.

We have a beta version of W95SSTV available for download from
our www/ftp sites. It is an SSTV program for Windows 95 and
Windows NT, and runs on higher-end computers, using the
sound card as an interface.

It is still beta software, and we're working hard to make it the
best SSTV package around.

The beta downloads *DO* have an expiration date that will be
extended with each successive release. The "final" shareware
release will *NOT* expire, although it will be feature-limited.

You can read about it or download it from :

Yes, Todd, I'll agree you can beat the system by giving the traffic
to another country who the U.S. has 3rd party agreements with.
But what I was trying to point out in the first message is that it
has been my experience that once 3rd party traffic gets out of
the U.S., it is very improbable that it will ever get delivered.

As I said in the first message, depends on where it is going. Now I
know you are sending it to Australia. As far as I know, there is no
NTS system for international traffic in place in Australia. Remember,
the NTS system was 'made in the USA'. The only other country
out here I have seen any NTS messages for was the P.I., and
with no zip codes, all that traffic had to be routed manually.

Again, check with the operator of the BBS you intend to originate
the traffic from - if he doesn't know how to route it then I can
assure you it won't go anywhere.

Source record: 36697

Hi Tom,

Holding a valid Ham License is no protoection from being suckered. Especially, when one does not do his homework.

Hams have been transmitting data in backbones, and at the user access level in the U.S. for many years. In 1989 we put on a 56 KB full duplex link here in the Chicago area. We would have more of these, except for local politics. It operates in the lower end of the 440 band. N6GN and a group of hams in the San Fransisco area have a network of 230 Kbps links operating, using custom designed, and made radios. In the Atlanta area, there is a network of simplex 56 KB users, and nodes. These projects all started around the same time frame. In Utah, there is an experimental link on 2.3 GHz, running around 1.5 MB/s.

Yes, Commercial communications is much more reliable. It would not exist if it was not. Ham Radio has the luxury of being un-reliable, tactically. But, the purpose of Ham Radio is strategic, not tactical.

Most average citizens of the U.S. have little awareness of Ham Radio. There are places, companies, where Ham Radio an everyday thing, however. What kinda companies are these? What forces are at work to concentrate an otherwise disperse group?

In my experience, there s one company that tipifies this. Its Motorola. A drive around the Motorola parking lot in Schaumburg, IL, where the Corporate HQ,and Commmunications divisions are located, shows how pervasive Ham Radio is in that company. There are many ham plates, and lots and lots of 2 meter and 440 antennas on vehicles.

Why so many hams at Motorola? I think its because these guys can get the job done. The JOB of making a JOB for YOU! This is where Cellular telephone was developed, and tested. This is where paging started. This is where allot of wireless applications, that keep u in money, were started. Ask most any engineer who is a Ham, if Ham Radio was responsible for him/her being where they are, and they will say yes. By technical education, motivation, comraderie, and experience, Ham Radio fills a gap that most technically inclined people find, when they are dispersed amoung the general population.

Commercial interests may find better short term, quarterly profits oriented usage for 2 meters and 70 cm. But, would this be anything less than a technological clear cutting? Would it take 100 years to resoil the forrest, after the 10 years of profit taking errosion?

I personally am disappointed that we Hams do not play together nicely in our radio-technical sand box. For example, the lack of coordination for more 56 KB full duplex links in the Chicagoland area. But, is it time for sand-

box to be bull-dozed, just becuase the kids can t build a sand castle that will survive a rain storm, and the older kids are bullies?

Yes, we need as hams need a kick in the seat! Taking away 2 and 70 cm is not it, tho. We can do pioneering if the rest of Ham Radio has these bands, and is not demanding everyday usage comitmants of spectrum where developemental efforts are in progress.

>recent ROMs for about $150. Basically, it's a KPC-3 and a great HF
>multimode in one box.

Rob, I believe Pete is giving you good advice on both counts. The KPC-3 is
a nifty little unit. It has the personal mailbox and node capability built
in. However, if you ever think you might want to use some of the other
digital modes such as pactor, or think you might just want to work some HF
packet, the KAM is a great way to go. For $50 to $75 more than a new KPC-3
you can have a used KAM. Some guys buy a big tnc like the KAM, but never
read the manuals, and never figure out how to use the gear. In a few years
they sell it with very little time having been put on the unit.

Which ever way you go, you will need some software. Don't use the give away
software that comes with the Kantronics TNC's. I recommend PaKet6, a good
shareware program. If you want to spend almost as much on software as you
did on the tnc, KAGold is a fantastic program for the KAM -- but will cost
you $100 or so!

Good luck and have fun!

Proof, please. I warn you, I have been employed in commercial two-way radio product development for twenty years and I've seen little disparity between commercial and ham equipment. I suppose it's because the design engineers are both hams and product designers.

Brian Ellsworth wrote:

>Ham
>radio on the 148 and 440 has been technically stagnate (not
>everyone, i know, i know..) for so long that it isn't any wonder
>the resources are being reevaluated.

What new technology are you thinking about, Brian? Direct sequence or frequency hopping spread spectrum, maybe? Hams have been there, done that and got the T-shirt. Doesn't work as well as FM and costs a lot more. Or perhaps narrow bandwidth digital voice? Again, doesn't work nearly as well as FM, costs way more and sounds really sh*tty! Or amplitude compandored single side band? Hams did that too, doesn't like multipath and costs way more. (Although Midland/Securicor's DSP derived ACSSB neatly solved the multipath problems, but still will cost a lot more to build than FM.) Cellular phone, no new technology there, just reapplication of stinky old FM.

So much for commercial radio's new technology.

Besides, where is it written a ham band must be used to develop new technology to remain a ham band? Must be only in your diary, Brian.

> begin with maybe we'd have a better argument for keeping them. Take
> two meters for example. Here on the east coast there is NO WAY you can

Public service is the main reason for the existance of ham radio. If it is perceived by the decision makers that ham radio is not serving the public interest, it's history. Two meters and 440 are the most used frequencies in normal and disaster conditions.

Their loss due to a techno-babble boondoggle would be another
disaster.

> New technology developers
> are already forced to find other bands.

They always have been, Brian. It's nothing new! TV did, FM
broadcast did, cellular phone did... so what? It's part of the
business. There's nothing magical about the 144 or 440MHz bands
that makes them vital for these low earth orbit sattelite scams.
Any UHF and up frequency range would do as well, probably a lot
better.

> Losing a couple of key bands is hardly the end of amateur radio, but
> it might be the end of some antiquated obsolete technology. Oh dear,
> the two meter repeater owner ol' boys club will be forced to contend
> on a equal footing with the 'new' guys. How nice.

Wow! We would lose the two most used bands and all you can say
is 'goody, now I can be the big man... and I didn't even have
to pay my dues!' Come on, guy, let's hear your ideas for new
technology radios that'd work better and cost less. Got any, or
are you counting on some techno-miracle that had it's origins in
some schmuck's attempt to attract gullible investors?

> I don't like the idea of having to toss out my 440 or 148 gear any

n8fow@wireless.org (Ron Atkinson) quotes and writes:

: >Commercial interests will be able to provide a better use for this
: >spectrum because, as I've pointed out, their applications will be more
: >efficient and reliable. Their use of this spectrum will add to the GNP
: >and we, as a nation and a world, will be better off.
:
: How ignorant...where do you think new ideas are pioneered from!? Just about
: every single radio breakthrough since its discovery, has been done by amatuers.

>Not really. In many cases it's at schools or businesses.
>Then hams see it and copy it. In some cases we did pioneer it,
>but in most cases we did not.

And hams don't go to the schools, work in the labs or are
engineers developing the new technology for these businesses? Is
that really what you meant to say, Ron?

: >How many of you who oppose the reallocation of these bands are pioneering
: >new, worthwhile communications systems? Are you doing anything to advance
: >the state of the art or are you just using your $500 dual band mobile as a
: >glorified CB radio to chat with your pals?
:
: Again...you are wearing blinders. Some amatuers are VERY HAPPY just using voice
: to "chat with their pals".

>but you can only support the lowest common denominator for so long.
>Sometimes you have to say 'step aside' for progress.

Why? Is it progress if you have to get out of it's way? If it's
really progress it'll happen without rolling over anyone.

>Voice is just about
>everywhere, it's the new modes that are always struggling to find that
>bit of spectrum where they can operate on.

Until the day comes when everbody can type as fast as they can
speak, voice will remain the main means of interactive human
communication.

Technological progress has merely provided us with more
efficient means for going backwards.

Well that is an interesting position. I agree, somewhat, BUT ! !
Have you taken a look at the twenty or forty meter bands lately ? The
EXACT same thing has happened there as well. As a matter of fact,
that's why I am a listener and not a talker. I got my license in
1962, for the express purpose of experimenting with antenas in the
VHF and UHF range. I used to home brew stuff, and build kits. Not so
much any more, though.

Don't blame the new techies, either. There are a LOT of oldtimers that
have just settled down and become appliance operators. But SO WHAT?
What's wrong with that? Who says that 100% of the spectrum has to be
used 100% of the time by experimentors? And who makes that
judgement? Are YOU qualified?

>>battery operation something I absolutely need.

I use the kpc-3 currently. It works well enough, but only supports Kiss
Type 0, which is a mode without error correction. If you are serious
about packet, ie. TCPIP, or HOSTMODE, then I'd suggest a TNC-2 clone,
with a WA8DED hostmode protocol chip. The Kantronics line currently
does not support this, but for heavy packet operations under Linux, Os/2,
or even DOS, the WA8DED hostmode gives you a wider range of application
types, and to the best of my knowledge, these TNC types also support
error correction under KISS. 73.

>[.....]

Thor,

I read your comments and understand what you are saying. I suppose it
is difficult to document specific contributions that hams have made
to commercial technological developments. But isn't it difficult also
to give credit to specific commercial R&D programs for these
technologies?
(e.g. AM, FM, SSB, SS, Digital communications)

My point is that much of what hams do along these lines provides a
subtle but strong basis for commercial development. Many of those
engaged in commercial R&D are hams... and I mean M A N Y.
And those who are not ARE influenced corporately in their R&D
projects, by work that hams are doing.

I think you will find that every major company that has been involved
in the development of the radio art (including digital processes)
have significant numbers of hams involved in their R&D. I know this
is true. I have worked for such companies and you have too.

It would be a terrible shame to take away such working platforms
as the 2 meter and 70 cm bands. Even rag chewing activity is
important. It provides a way of proving and learning in a routine
manner how the technologies we use hold up and perform under various

conditions. Some of the most important communications
implementations are done on 2 meters and 70 cm.

And never forget, the "R" in "R & D". The experience with existing,
and yes, even ancient technologies is extremely valuable. That's
the "R" part. So don't demean our use of old and proven technology.
That is the step we stand on to reach the newer, higher developments.

I could go on an on in this vein, but that should be sufficient to
help turn some of our thinking around.

HAM RADIO CONTRIBUTES TO THE GENERAL GOOD OF EVEN COMMERCIAL
COMMUNICATIONS TECHNOLOGY IN WAYS THAT EVEN SOME HAMS ARE OVERLOOKING.

IT'S OK TO "BLOW OUR OWN HORN." NOBODY ELSE SEEMS INCLINED TO.
BUT ABOVE ALL LET'S NOT SELL OURSELVES SHORT.

Thor, I am not overlooking your underlying pride in amateur radio.
But it's not just your comments I'm responding to. I have seen
a few others in these groups that are almost willing to give up too
easily to the pressure.

My heartfelt 73!

Dick - W7DHS

Works great and doesn't cost all that much more. If your arguement were
true then why has most of the commercial carrier hops gone from analog to
digital SS?

> Or perhaps narrow bandwidth digital
> voice? Again, doesn't work nearly as well as FM, costs way more
> and sounds really sh*tty!

Again this works great. Sure the audio quality leaves something to be
desired but we're talking about communications not broadcast. This is a
field that hams could develop and work on to show they still have the
right stuff but so far I don't see anyone trying that on the amateur
bands.

Or amplitude compandored single side
> band? Hams did that too, doesn't like multipath and costs way
> more. (Although Midland/Securicor's DSP derived ACSSB neatly
> solved the multipath problems, but still will cost a lot more to

> build than FM.)

Here again is an area in which hams could be tinkering. If someone could work out those bugs they would stand to make some money. That's why Midland is doing it. But why not any hams? None of what you have mentioned is cost prohibitive for most hams to play with on some level.

>Cellular phone, no new technology there, just
> reapplication of stinky old FM.

Really? Sure it uses frequency modulation but could you please send me the details of your trunked amateur repeater system? It seems to me that cellular's trunking and hand off abilities are something I've not seen on amateur radio anywhere. Please advise!
>

> Their loss due to a techno-babble boondoggle would be another
> disaster.

What you say about two meters and 440 is too true and I couldn't agree more. But the main reason for the existance of ham radio is NOT public service! You scan those bands for a day, spend another day on 20 meters and then tell me that public service is the main reason for it's existance. It's for rag chewing recreation. We pay for that privilege by claiming to provide public service, promoting international goodwill, and advancing the state of the art. Sometimes we actually, accidentialy, get around to doing some of that but the main reason amateur radio exists is to shoot the breeze.

> Why? Is it progress if you have to get out of it's way? If it's

In article <31b5f250.3352004@news.sprynet.com>,
KR4TZ Bill <kr4tz@sprynet.com> wrote:

Bill said most of what I would have said...but here are a few more bits (no pun intended). Btw, I'm in NW Florida---Ft. Walton Beach, to be exact. That's about 10 to 15 miles east of Ground Zero for both Erin and Opal (GZ was Navarre for both). Yes, my apartment here on Okaloosa Island survived...but only because it's built like a fortress and is on huge concrete pilings. :-)

Also worth pointing out: I'm one of the Assistant ECs in the Okaloosa County ARES group. To say that we work very closely with county emergency management would be a vast understatement. Oh, btw, 2m repeaters make up basically all of the county's local emergency communications within amateur radio. I don't see that changing any time soon. One reason is the simple fact that most folks around here have 2m radios. An HT will have trouble hitting the primary North Okaloosa repeater, but we have folks who take care of relaying traffic important to the northern end of the county.

Btw, when I was in college, I was an AEC in the Brazos County ARES, too. I can't speak for their status today, but at that time, 2m was the heart of the local ARES/Skywarn work there, too.

And if you don't think Amateur Radio's part in emergency communications is really all that important, just ask the Emergency Manager for Okaloosa County. You'd better ask in a very polite way, though, or you may not walk away from it (no, I don't think he's a violent guy...but I *DO* know he'd defend us with, ummm, a great deal of enthusiasm).

Oh, but of course, everyone knows that emergencies don't happen in their town...only other towns. Ask anyone in Ft. Walton how they feel about that one. Be sure to run away before you feel their answer hit your face.

Hint:

July 1994: Tropical Storm Alberto (aka Alberta), direct hit (Destin)
June 1995: Hurricane Allison (wimpy cat 1), near miss
Aug. 1995: Hurricate Erin (almost a cat 2), direct hit (Navarre)
Oct. 1995: Hurricane Opal (cat 3, was almost a cat 5 before landfall), direct hit (Navarre)

>Thought maybe I would step in and give my 2 cents worth! I would hate
>to be caught up in "FLAME" bait,

Agreed. The original article (and one of its followups) was clearly flame bait. But as this is an important topic, and one that most

certainly matters to folks in this area....

>Good job. I too, would hate to see the 2m and 440 Mhz band be
>reallocated. Let me give an example how these bands are being used in
>South Alabama.

This is from the NW Florida side of the South Alabama network. :-)
Btw, Mobile, AL is just west of Pensacola, which is about 60 miles
west of Ft. Walton. We all work together because, as one of the
(section or district) ECs said at a previous EC meeting, ``storms don't
observe county lines, so we shouldn't either'' (that's more or less a
direct quote).

>With this system, we provide skywarn support to the National Weather
>Service Office in Mobile, AL.
[....]
>by providing near instantaneous feedback from spotters and comparing what
>they were seeing, to what was on the radar screen. And we relayed "vital"
>storm warnings to the affected areas (areas not covered by the NOAA radio
>network).

This is one of the things that prompted me to followup to this post. In
case anyone has any doubts, the folks who refer to this as ``vital'' are
the NWS. Last year, we had the director of the NWS office in Mobile
(which also serves this area) out for Skywarn training. He made it
absolutely clear to us that our reports were *VERY* important to them.
In fact, he spent quite a bit of time explaining to us exactly how
important this information is, and why. It was obvious he wanted there
to be no mistakes in that area....

>Also, we provided tacticle support for both Hurricane Erin and Opal
>that ravaged the Gulf Coast this year. In fact, the Emergency Net
>that I and and a friend of mine operate received certificates of
>appreciation from both the National Weather Service and the Mobile
>Chapter of the Red Cross.

After Opal (and, I think, Erin...but I'm not sure) our ARES group received
similar certificates. I was gone during the whole Opal mess, as I live in
an area that was under a mandatory evacuation order (and was a restricted
area for some time after the storm...meaning, if you were caught on the
island, you were arrested on sight by Nat'l Guard guys driving Humvees and
carrying M-16s...not the way I'd want to spend an afternoon!).

>Not to say it hasn't been competed against! Local cellular phone
>companies was pushing their own system as a means for spotters to call
>in to local news rooms and report sightings of bad weather.

Not an issue here. :-) The big three radio stations (99 Rock, Country
105.5, and some AM station owned by the same company) were running a
simulcast, broadcasting direct from the EOC. They also did a fantastic
job, and *DO* deserve a lot of credit. The thing is, they did a
DIFFERENT job. I don't see the two as competing---quite the opposite,
in fact. They both provide critical services.

During Erin, I had multiple radios going here. The first was a 2m link to the EOC. The second was a 2m link (until I lost main power---I still don't have a generator, or the room for it, and reserved battery power for the 2m link to the EOC) to the main 2m net in NW FL. The third was the simulcast on 99.5/105.5 FM/[? AM]. I also had the HF rig on the 80m net, but again, that only lasted until the power died (I'm not one of the people in the area we rely on to have emergency power to supply HF---I probably won't be as long as I'm apartment-bound). Each radio had their purpose. Each was important. Two were critical (the 2m link to the EOC and the simulcast).

Oh, one more thing. Let's not forget the other side of the emergency communications: links between the Red Cross shelters and the EOC. That was my role during Allison (which had a good enough chance of hitting here that the shelters were opened, and the recommended evacuation order was given). I'm not the AEC who deals primarily with those issues, and I'm not sure if he's on the net to elaborate on this, but I can tell you that it is important. Btw, during Erin, the cellular phones at at least one Red Cross site were useless, and their regular phone lines were toast. Without us, they were completely isolated.

>As you can see, amateur radio still plays a VERY important role in
>public safety.

Oh, but as everyone will tell you, disasters never happen here...only somewhere else.... Oh yeah.

Later,
--jim

PS: I can't mention the Red Cross in this post without adding the following, highly off-topic, comment.... Sorry, but this goes un-said too often.... I thanked the individuals involved at the time, but that just doesn't seem like enough.

Attention all Red Cross volunteers who see this: THANK YOU for the work you do. Your help in this area during Allison (even though it was a false alarm---we didn't know that at the time!), Erin, and Opal, was priceless. As long as I live, I will never forget the Red Cross truck driving around the island distributing hot meals to those who had no other way of getting one. I'll also never forget the night I helped out w/ comms at a shelter during Allison, and saw first-hand just how little some people seem to appreciate what y'all are really doing there, all free of charge.

Same goes to the National Guard guys, driving around in Humvees, as well as the Sheriff's department and state troopers from all over the state, who protected our property from looting (as well as arresting those who tried to make a quick buck by selling $500 generators for $3000...price gouging is highly illegal in Florida...and the sheriff's office doesn't take too kindly to it!).

Thanks also to the countless others who donated money, bottled water, food, and other supplies to folks in this area.

Insurance companies (esp. Allstate---who seems to have been the
worst, according to everyone I've talked to): BITE ME.

If you know anyone who fits into any of these categories, please
feel free to forward this to them.

Door opener/alarm Gunn sources are easy to find but to FM modulate
them you have to vary the Gunn voltage. 10 MBS should be easy to do
and the equipment is cheep. I don't have QST at hand so can't quote
but there should be advertisement for the units you asked about.

In article <01bb547b.36b40a60$144960ce@thorw.nidlink.com> "Thor Wiegman" <thorw@nidlink.com> writes:

>Yes, but that is slow by today's communications standards. And how much
>of that network traffic is composed of voice, video, or fax?

What does this have to do with anything? Fact is, 57.6k data use is on the leading edge of "fast" communication.

VHF/UHF freqs in my area are currently being utilized for higher speed data communications every day. This aspect of ham radio is growing, and there are more and more people getting involed everyday.

>Most of that
>network traffic is still only data and is distributed to/from the end user
>as 1200 baud half duplex AX25 packet. These 56 kbaud networks you speak
>of are the cutting edge of amateur technology while the commercial guys
>are handling networks at far greater speed and using it to transport
>voice, fax, video, as well as data.

Not through the bandwidth offered at VHF and UHF. Coax, twisted sheilded pair, 900 Mhz maybe...but not at lower freqs.

>The powers that be say so....sorry but he who has the most money wins.
>Unfortunatly so. I don't like it any more than you do but that's the way
>it seems to work. Wasn't that the agrument they used to take away that
>chunk of 220 MHz?

And wasnt your past argument, that if amatuers are not going to utilize the bands for there best possible use (high speed data communication), then we should lose them?

My grandmother has had a telephone for 50 years. I supose since she is only using those 57.6k capable analog lines for mere "voice", she should have her phone taken away, because the commercial and government can better utilize her line/bridge at the phone company.

Sheesh...give us a break will you? Do you realize how you sound?

[commercial zealot's comments about how much better private commercial and government agencys can utilize our bands because their more advanced snipped]

So you are to proclaim, whoever can utilize the bands the best should get them...period.

This mentality is flawed...there would be just one large corporation/government that would have the entire spectrum...period.

While I pesonally find it disturbing that a fellow ham is so quick to support the sezuire of our bands, I am thankful that this guy has no influence on that decision.

The name of this thread should be "The selling out of my fellow amatuers".

What a true disgrace...

Take care all.

Thor, what the heck is your problem? If you don't like 2m or 440 get off of it!!!!!!!!!! If you don't like the way the bands are sell all of your gear. While you are at it, some amateur's out there think that all of the hf band's are a waste time. Are you going to sell them also?
I think most of the amateurs out there are satisfied with 2m and 440 bands as they are.
Take your commercial garbage somewhere else.
Take some of the cellphone band. I know that the cellular network is a bunch of #@!%&*. I have a cellular phone and it doesn't always work. It isn't as reliable as radio.

You would be doing all amateurs out here a favor If you would voluntarily turn in your callsign to the fcc and get out of amateur radio.

2945. Loss of 144 and 420 MHz

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-09 00:00:00 UTC
From: rcarpen@DGS.dgsys.COM
Message-ID: <Pine.SOL.3.91.960609114331.671A-100000@DGS>
Source record: 36637

While not surprising, considering the subject of this Group, the main proponent favoring the loss of these bands seems to consider that all worthwhile communication must be digital. In fact, he implies that all that should count in amateur radio is the latest gee-whiz digital communication.
How about increasing the understanding of VHF Es propagation? Scientific research budgets being cramped the way they are, the hams provide the main experimental data-taking in this field of science. While I'll admit that data reduction has been somewhat lacking over the years, I now see a resurgence of "serious" analysis.
Ham radio has often focused on "systems" which can be done with relatively rudimentary (cheap and simple) equipment. How about APRS? Haven't various public utilities pick up on it to track their vehicles/buses/etc. Isn't it being used in Bosnia to track alleged nighttime moving of the boundries? Cheap, simple, and available still have a place in this world.
Listening to my local Fire and Rescue dispatcher reveals that their digital communication system requires a lot of voice fall-back and confirmation. So much for the latest and greatest "efficient" use of their channels. It'll come some day, but it's not good enough now.

On another aspect, surely LEO handsets couldn't have efficient antnnas at 140 MHz. Who's going to market a handset device with a 20-inch whip! Low antenna efficiency translates directly into shorter battery life. Not good for marketing.

I think you can still get the M/A-Com units from Advanced Receiver
research. They are a bit costly though.

I believe someone suggested the gunn units used in motion detectors.
I would shy away from these in a 10Mb application. Directly modulating
a Gunn diode barely results in good video for my ATV applications.
High speed data would be even more demanding.

John;

FACTS:

QRZ added 32 New Programs in the June 1996 Issue
AmSoft added 108 New Programs in the June 1996 Issue

QRZ June 1996 has a corrupted file "tfhpn101.zip"
AmSoft tests all its files.

QRZ June 1996 has published damaged data in the call sign data
Check out KC8CSF, KC8CYB,KF4GSM, & N3XGK on your QRZ!
These people were all born on 12/31/99? and got a ticket on 12/31/99??
AmSoft notified the FCC of these flaws on April 22. The FCC fixed them.
It may be a surprise to you, but SAM, BUCKMASTER, & AMSOFT all fixed
the call sign errors before publication this spring , QRZ did not....

So go ahead an spend your $12.95 or the $9.40 they were selling for at Dayton!
You only get what you pay for.....

BTW I also use the flying horse CD and like it.

I have now succesfully got my Kantronics 9612 with a Kewood 241a, and 451a working and on the air for true 1200/9600 gating. The 451a is on a 9600 bps split freq repeater, and runs in full duplex.

I still have a few bugs to work out in the cofig file, but my main concern was getting some software.

Anybody know any good dual port software for the 9612? I am interested in having split windows...one for each port (vhf, 1200 & uhf, 9600).

WinPack has split windows, but not for ports, hence, it cant be used effectively. Anybody have any ideas/suggestions?

Thanks much, & take care.

There are two aspects to PGP - encryption and digital signatures. The
latter is a very useful way of verifying the originator of a message and
that its contents have not been altered in any way. The contents remain
unencrypted, but a couple of lines of the "signature" are added to the
end.

In the UK we have had a ruling from our regulatory body that even these
signatures are illegal, even though they do not encrypt the message.
(Amusingly enough the committee of the RSGB that controls packet, and
which passed on this ruling to packet users, will not accept comments
via packet, because of the risk that messages may get altered!)

I wonder what the situation is regarding the use of PGP signatures in
other parts of the world?

From: William Vaughn <billv@olympus.net>
Message-ID: <31BB3418.1A0A@olympus.net>
Source record: 36644

After a couple of attempts at getting a packet contact during the last two field days and Failing. I am wondering what the procedure is for making a contact on field day. Must it be a simplex keyboard to keyboard contact? Or can you use a node to call cq? How does this work? What does everyone else do? I would like to make a few contacts on packet while the bands are slow during the day. Another reason is to demonstrate it as a viable method of communication to the cw-hf crowd.

You can try putting your tnc into kiss mode as BPQ doesn't work with tncs in terminal mode. If you got a Kantronics tnc, commands 'intface kiss' and 'reset' do the trick. There might be some other things to change too, but this is the first that came into my mind.

2966. Help PCI-3000

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-10 00:00:00 UTC
From: William Osborne <wosborne@utdallas.edu>
Message-ID: <4ph9ev$sfu@news.utdallas.edu>
Source record: 36561

I have a PCI-3000 which I like very much but I would like to find some software for it that would let me send canned messages for CQ, Equipoment, QTH, etc. If you know of a software program that does this please let me know. Also has anyone used the P38 card and the PCI3000 card in the same machine to get CW plus all of the digital modes?

Thanks and 73

My recollection is that the ARRL specifically permits relays for
packet. In any case, there would be no problem in hailing another
station using a digipeater and then qsy-ing. The problem I had
here was that everyone-but-everyone was on 145.01, with predictable
results: everyone connected, no one clearing packets.

IMHO, packet's best application is DX Clusters. Try to demo
that concept! No DX-er will fail to be impressed!

>a Gunn diode barely results in good video for my ATV applications.
>High speed data would be even more demanding.

Direct FM of the gunn osc is only good for a couple of mega-bits. The
motion detectors can be modified for electronic tuning by placing a
varactor into the gunn osc cavity. This is tricky, but if done
carefully, can save several hundred $$$. The varactor isn't critial, a
garden variety 1N914 can even be used. The trick is getting the varactor
into the cavity while not allowing any microwave energy out -- *and*
the feedthru must allow several MHz of bandwidth, so a garden variety
feedthru cap isn't the best choice. Fortunately, it doesn't take too
much LC to attenuate 10GHz.

PGP authentication should be no more unacceptable than using a CRC to verify
correct transmission of a binary file. Message encryption is obviously out,
but the authentication function should be fine.

I read you comments with interest as I sold my dsp2232 for a dsp232. I thought about it hard and fast but thought that the new hardware loks good for pactor 2 ext eventually.

What is a BGM connector. I am not too sure what they are.

Incientally, I phoned AEA re the updated Eprom but they said they were still working on bug fixes.
My unit actually came with Pacratt for Windows version 2 (I presume a new version is in the pipline) but am going to use the PK/DSP gold version as soon as it becomes available

>Regards, Rob
>PE1OTP @ PI8SHB

No. In the US they can experiment to their hearts content on 6M and up.
Also, antenna experiments can be conducted on the HF citizens' band. And
the 1750M band (refered to as "The experimenters band") is great for
xmtr and ant projects. Actually, Part 15 gives the experimenters a
wide latitude of MF and HF frequencies to use license-free.

Jeff KH2PZ

P.S. Bob, I realize you're not in the US, but doesn't your country at
least have code-free VHF license?

Hello hams,

I have a Logimetrics model 925, 50kHz to 80MHz, RF signal generator for sale. This unit has a built-in digital frequency counter, which can be used seperatly within this range. RF level is adjustable from 1 microvolt to 3 volts. Modulation is adjustable at 400Hz, 1kHz, CW, and external.

This equipment was orignally used by the United States Coast Guard at its last overseas LORAN station, in Keflavik Iceland. It was within calibration (METCAL) standards as of March 19, 1995. It is very clean, and in perfect working order.

I resident in the New Castle, Delaware area. IF you would like to arrange to inspect the equipment, if in the local area, feel free to request so. All others pay shipping. I'm asking $250 or best offer.

>the art maybe?

Part 97.1 (c):

Encouragement and improvement of the amateur service
through rules which provide for advancing skills in both
communication and technical phases of the art.

It doesn't say we must advance the state of the art to
keep the bands. It just says the rules must allow us
to advance the state of the art. I suppose that's
why we can get STAs when the rules get in the way
of trying out some new cool idea.

The written exam contains more than just theory; in particular, there
are questions about rules and operating procedure that apply regardless
of what mode one uses.

>The Basic Class License would authorize use of the 80 Meter CW Novice segment
>only, same power limit as Novice. No other bands permitted.

Considering that the examination on rules and regs is probably the
single most important part of the licensing process, it sounds like
the current Novice license would be ideal for this.

>I think that a simple, restricted taste of amateur radio could be most

>otherwise. And in my humble opinion, the one thing that distinguishes an
>amateur operator from a casual user of spectrum is the use of Morse code.

That may be your opinion, but it is not founded in reality. Have a look
at Part 97.1 for what distinguishes amateur radio operators from
other users of RF.

Source record: 36583

Hello OM's

As a keen supporter of PGP security for my packet messages, I fail to understand the logic of some sysops killing messages with PGP sigs. Someone has actually gone to the trouble of writing a piece of code that detects pgp strings and kills the message. Well mental giant, why don't you modify the code to authenticate the messages and strip the PGP sig out one the message has been validated by the public key !

They stand behind their laws and bellow "Encrypted messages are not allowed on the packet network". Well chasps, the PGP sig is not encrypted text, it does not contain communist propoganda, pornography or messages from Satan. Open your mind and understand what it actually is. It IS NOT cypher text, it is a character block, when used in conjunction with your public key block, can be used to authenticate your messages. Simple as that BOYS !!!

Talk about double standards, what about compressed message forwarding using FBB. If I sit on the forwarding frequency I cannot see the message in plain text on my screen. Think about it, this IS ILLEGAL !The message is NOT in plain text. How do I know that the messages that are being transported using compressed forwarding do not contain nasty things ?? You are hypocrits !~!!! What about BBS's that have pornography on them for users to download ? Put them out of business, not people that wish to legitimately experiment on packet !

If the use of PGP is marginal in your country and could be open for discussion, don't just follow like a sheep. Use your reasoning to make a valid judgement. My messages have nothing to hide.

This lack of reasoning and mental judgement really concerns me. What about all of the UTTER TRASH, over 1.5MB per day of @WW messages ? Things like

1) Where is this message now ?
2) I want your colaboration ?
3) Want a 144mhz sked ?

This utter trash wastes the bandwidth of many digital resources but it goes on day in, day out. Because we can't password protect ourselves, we resort to PGP, our messages are killed..... HYPOCRITS !!

Regards..Peter..vk2yx

It allows a very inexpensive cable with a little bit of cheap logic, plus
software on your computer, to insert itself into the most private workings
of the CPU. Its for software development. Should turn the DSP-232 into the
digital packet hacker's dream hardware.

>Kevin.......
>gearloos@pacbell.net

Hi, Kevin. . . . .

May I assume that you are refering to the BayPac BP-1 Packet modem?
If so, the following is the hookup procedure for Kenwood:

RED: Sleeve of mic connector
YEL: Ring of mic connector
GRN: Tip of speaker plug
BLK: Body of speaker plug.
Do NOT connect the shunt

If you don't understand the above, then send me an e-mail, and I'll
try to help out.

BTW the little Baypac is a real neat device. I have two, and I've used
it for several yearson my main system as well as portapackie.

>error correction under KISS. 73.

Adding to these thoughts, the KPC-3 is also not upgradable to 9600
baud or faster. It will not support PSK modems for satellite work,
and you're stuck with the proprietary firmware Kantronics offers.
The TNC2, and clones, offer these things. That said, the KPC-3
is a fine little box, but it is a closed box, and you'll have to
dump it to move on to more interesting things.

And a final thought, the TNC concept is an obsolete paradigm.
You'll be better served by a host based data pump feeding a
higher performance RF modem (forget trying to shove even moderate
speed data through voice radios not designed for that purpose).

Actually, the FCC is about the worst group you could ask about PGP...
They don't seem to even read their own rules let alone have enough
understanding to make an on the spot judgement call.

The ARRL wouldn't be of any help... Total lack of any clue as to how
the law works there as well.

All of the communication lawyers I have spoke to (about 6 or so) have
wondered why the question has even come up... That is, there is no
problem with PGP signatures for authentication.

Actual message encryption is clearly out.

At least you have 56k running in your area. Each area of the country is different, and there's only an extremely small amount of people that even use the band efficiently. Those small numbers just aren't enough anymore. Come on up to the Detroit, Michigan area and attempt to even get single frequency to run 56k on in 430/440. I asked a frequency coordinator about 6 months ago "If I wanted to operate 56k on 430/440 is there a frequency I could use?". A few years ago you could have put something up, but not anymore. Nearly the entire 2m and 70cm bands are covered with voice repeaters and remote links. Your typical 2m repeater with links consists of 6 frequencies, 2 VHF frequencies (repeater input and output) and 4 UHF link frequencies. This is pretty much the norm, but it varies, some have more and some have less. The 70cm links are spaced 25 khz, so that means each repeater gets 100 khz of bandwidth to pass a NBFM voice signal down, and usually only 1 or 2 links may even be running at a time, if one is running at all. If they went spread spectrum then the link frequency problem would go away, but there's no way that every repeater is going to switch all their links over.

Now try something else, go get on 9600 packet and tell them you want 2 frequencies (such as a repeater). You'll get everyone argueing with you saying "What the hell do you need TWO frequencies for? You only need ONE for packet." Yup, that's the mentality here in the major cities of Michigan, no technologoy around here. If you try to put up something better than everyone else and improve things then you're starting a war with those that are already there supporting the old technology (even if you try to support it to). Another funny thing is that once you drive out of the major cities it seems that many people don't even seem to know what 70cm is. There are cities that have tried to put up 440 repeaters and ended up shutting them down because nobody ever used it, 2m supports everyone just fine and they're just happy with it.

It doesn't bother me if we lose the band or not, I certainly wouldn't to see it affect people that are using the bands effectivly such as your area, but in many (if not nearly every place else) the bands are being wasted away very ineffciently and there's no indication that the problem will ever go away either, or the bands aren't being used at all. The LEO birds can have 70cm here in Michigan if they want it, we abused that band almost as bad as we have 2m (getting like CB on some frequencies in Detroit).

That all sounds fine but the test for novice and tech is mostly rules with
very little theory. How is someone going to transmit on the radio spectrum
if they don,t know the rules? If they want to transmit without knowing the
rules, they can do so as a third party under someone elses liscense.

different standards are in use on 2400. I think they are around
1800 and 3300 Hz (1.5 times the 1200 tones)

>4800

>9600

At those bitrates, AFSK is no longer used. Direct FSK of the radio
carrier is popular, but that means there is no "mark" and "space" tone.

Amateurs have been sending voice, fax and video for tens of years.
The fact that it is possible to send video does not mean that any data
network must have the capacity to do so.
I.e. there is a place for 56 kbps networks.
Of course a 56 kbps channel takes less bandwidth than a megabit channel,
so it is not necessarily more wasteful of bandwidth.

What *IS* wasteful is to use 1200 bps AFSK on NBFM. That should be
phased out as soon as possible. Because it transfers so little information
over such a lot of bandwidth, not merely because it is slow.

We flirted with digital voice for a while. It is wasteful of our limited
network bandwidth and offers us no performance advantages we need at this
time. It is really only useful if we need point to point switched service,
and amateurs don't use voice that way. A plain old ordinary FM repeater
better serves the uses to which amateurs put VHF/UHF voice communications,
IE primarily group discussions, point to multipoint nets, etc. If we had
network bandwidth far in excess of our needs, we could set up conference
bridges to soak it up, but that network bandwidth has far better uses
handling data, which only it can do, and leaving voice to the older
analog methods which do a satisfactory job serving that need.

We run a maximum of 56 kb on 70cm not because of technical limitations
but because of FCC rules. That is the maximum speed we are *permitted*
to use. The WA4DSY modem will do 128 kb with only a slight change, but
we aren't allowed to do that on 70cm. So don't complain to *us* about
slow links, we don't have any choice in the matter on this band.

We don't waste this limited throughput on voice or video because it
barely suffices for the data we wish to move without also duplicating
what is already available on the band via analog methods.

We have *users* running 56 kb, we have one duplex LAN operating,
and another under construction, as well as having a system of
interLAN trunks running at 56 kb. A lot of users are still at
1200 baud and 9600 baud, and I agree that's shameful, but we
have to service them anyway, and we do, using multi-speed,
multi-frequency network switches at our hub sites which we have
designed to be *transparent* to the user. This backward
compatability is a burden, but a political necessity for now,
and good experience too.

We could run faster if we moved to microwave, but the sparse nature
of our networks, the sparse financing, and the nature of the terrain
don't allow us to realistically install the microwave repeater sites

we would need. We can span the distances required with 70cm (barely), but there's no way we could do it at microwave. If we had more amateurs in the gaps, or if we had much more money, or if we had more favorable terrain, or if the FCC would allow us to go faster on 70cm, then we could move up the speed and have enough capacity to handle digital voice and video links as well as just allowing our users to surf the web. But we don't have those things, so we plod along as best we can at 56 kb on 70cm.

>> There's plenty of pioneering left to be done. The current 56 kbaud UHF
>> systems will go faster, no doubt, building on the technology of today.
>
>True but those of us who also work on the commercial side have been there
>and done that. The kind of pioneering I'm talking about is comming up
>with new technologies, methods of self regulation, etc. that will set the
>example. We should be among the leaders, as it was many decades ago.

Commercial networks don't face the problems we face. How well would they perform without central control? How well would they perform with users popping up anywhere they pleased any time they pleased? How would they perform when ad hoc networks form without approval and relink any way they choose? We're forced to explore things the commercial providers never have to face. It's a pain, but it is also useful experience. We're learning things about self-configuring and self-healing networks that the commercial boys haven't even thought about. We're learning how to deal with chaotic situations day to day that the commercial boys would only face in a major disaster. That experience is valuable, and some of the software we're developing to deal with it may have commercial application when true consumer networking arrives.

Speed is nice, but speed isn't everything. We're addressing issues the commercial boys bypassed with buckets of money and brute force. Having neither buckets of money nor large amounts of brute force, we've had to be clever instead. And just as it was amateur cleverness that developed the little LEO pacsats on which the commercial boys now want to cash in at our expense, what we're learning about intelligent networks may also have commercial application if we're allowed to continue our development work on VHF/UHF.

3007. KAM & Yaesu FT-757 GX problems...

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-12 00:00:00 UTC
From: I�igo Baztarrika <inigo@lander.es>
Message-ID: <31BF1D73.75BB@lander.es>
Source record: 36594

Hello friends,

I have recently bought a KAM multimode TNC. The problem is that when I conect it to my Yaesu FT-757-GX, I have to select the MIC GAIN at minimum to send a clear signal. The position of the MIC GAIN is so low that the transceiver only can transmit 5 Watts of power.

If I put higher MIC GAIN there is a big distorsion in modulation.

The switch K5 in the KAM (output level) is in LOW position (100 mV acording to the manual) but its seems to be too much for my equipment.

What can I do ?

How can I reduce the output level ?

My transceiver also has a ASFSK input but the same happens when I use this conector to input signal to the transceiver.

Could you help me ?

Waiting for your news by E-MAIL, advanced thanks.

answers by e-mail: inigo@lander.es

P.S. I have not problems for reception, I receive using the AFL OUT conector of my transceiver and all the signals are decoded.

3008. FCC's Position on Band Sharing

June 5, 1996

The W5YI Group, Inc.
Fred Maia, W5YI - Editor
P.O. Box 565101
Dallas, TX 75356

Dear mr. Maia:

In recent days, over 1,000 members of the Amateur Radio community have contacted me regarding the upcoming 1997 World Radiocommunication Conference in Geneva and expressed strong concern that U.S. proposals will impact adversely on spectrum allocated for Amateur bands. My purpose in writing to you is to respond to these concerns and to provide you with additional information regarding the WRC-97 prepatory process and its relation to existing services.

Many of the comments I received have focused on a list of "candidate" frequency bands discussed at the May 7 meeting of the WRC-97 preparatory Industry Advisory Working Committee Informal Working Group 2A (IWG-2A). The comments suggest that the Amateur Radio Service bands, specifically the 144-148 and 420-450 MHz bands, have been targeted as a source of spectrum for future Mobile Satellite Service (MSS) operations.

First, I want to assure the amateur radio community that no amateur bands have been selected for reallocation. The list of bands generated on May 7th represent only the IWG-2A's initial efforts to study spectrum use below 1 GHz in order to assess the feasibility of proposing world-wide MSS allocations in that range. Before recommending preliminary proposals for consideration by the Commission, IWG-2A participants must first conduct sharing studies among a range of services using frequencies below 1 GHz. These studies are necessary in order to determine the feasibility of sharing between services, and whether recommending any specific frequency band will be fruitful.

Second, the bands listed reflect only the initial component of a long-term effort to conduct sharing studies before submitting the Committee's proposals to the Commission for review. We intend to conduct sharing studies in bands currently occupied by government and non-government

users. In any case, I want to emphasize that the survey on spectrum use is an international matter which involves all frequencies below 1 GHz.

Finally, the current WRC-97 preparatory process, as in years past, operates under a Congressional statute designed to encourage maximum participation by all interested parties. Therefore, all written and electronic comments received at the Commission to date by Amateur Radio operators have been included as part of the public record on WRC-97 proceedings. However, in the interest of efficiency, we have created a designated FCC office and e-mail site to channel future WRC-97 comments directly to the WRC-97 Committee Chairs. I have included our lastest Public Notice outlining these changes and urge you to share it with your members.

I appreciate the many valuable contributions the amateur radio community has made to the progress of radio technology and to ensuring the safety of the American public. I look forward to working with you so that we can continue to advance the use of exciting telecommunications technology both in thge U.S. and abroad.

Sincerely

s/ Cecily C. Holiday

Hi,
I am having problems finding a terminal program that will allow me to alter the configuration of my netrom x-1j4 node. I've tried to use paKet and a terminal program that comes with BPQ, but I can't get the escape character to work.

I would appreciate any suggestions about software, because having to remotely change the configuration from another station is annoying

G'day all

I just picked up an AEA DSP-232 Controller and would like to run TPK. I had a MFJ 1270B working on TPK 182. Has any one managed to get the DSP232 working with TPK?
Are there any programs that can utilize what the DSP232 has to offer (the PC_Pakratt for DOS does initialize it but some commands are not utilized nor is pactor available in my version).

Thanks

John, VE3SJV@VA3SED

An MJF 1274 TNC here has started acting strangely, and I'm hoping somebody out there can help me figure out what's wrong.

Symptom: Boots up OK, and checksum passes. Can issue some commands, but if I enter SYSOP mode (the mailbox) and do anything (L, S, whatever), the machine hangs. Only way out is a cold boot.

Anybody got an idea?

>
The RS unit is simply a no frills frequency counter. For $100 it is OK. Mine works fine. It displays a frequency for the duration of the transmission. If you miss it, it is gone. The Scout is a top of the line "Oh-my-gawd" piece of equipment. It logs frequencies into memory, and keeps track of how many hits on each frequency. It can program certain radios (AR8000) and do other neat tricks. It costs more than $300 (I think.) Check out Opto's home page for better details.

Which one you want depends on your checkbook and what you want to do with it.

Thor Wiegman (thorw@nidlink.com) wrote:

: Please inform me as to how many voice and data channels are running on
: those networks. I am curious as to the ratio. Are you using commercial
: multiplex equipment for it or homebrew and if homebrew I would love to
: know more details.

Here, north of San Francisco, we are running a network with tcp/ip and
230 kbps hardware. With IP, the protocol does the multiplexing and
1 to N different applications can run simultaneously, limited only
by the available bw.

While a lot of our traffic is web browser related, especially text and
still images, we have experimented with some of the Winsock applications;
including window-window games like chess and digital audio applications
such as IGP and RealAudio.

TAPR offers a 'virtual meeting place' on it's pages which include
quite a number of audio and audio/visual presentations. I've listened
to perhaps 3 hours of them by way of our hardware. The RealAudio
quality isn't perfect but it is Q5 and not all that different from SSB
on one of the HF bands (as I remember, I don't think I've been down
there for 10 years!).

: I am also curious as to how and where the end user's audio is digitized
: for the network. Are the end users using special digital mobile radios or
: are you using conventional repeaters and digitizing the audio at the
: repeater and then multiplexing it onto your network.

The actual digitization for RealAudio can be done either realtime or
offline. It can then be served to the user as a normal IP connection or
as a stream which doesn't require the full complement of ACKs (it allows
considerable loss without too much effect on the audio).

: Thanks for any information

In addition to the pages pointed to in my sig line, if you like, you can
browse the "n6gn garage page" http://www.santarosa.ampr.org/index.htm, I
have a very short sample of .wav and RealAudio there.

We aren't dealing with just a company request here. We are dealing with
an arm of the US government formulating positions on spectrum usage below
1 GHz in preparation for an international conference which will establish
the assignments for the various services in this spectrum. As such, this
inter-agency government group *is* re-evaluating every bit of spectrum
usage between 30 MHz and 1 GHz. And they announced that fact, specifically
mentioning 2m and 70cm, in the meeting minutes which brought on the ARRL
request for grassroots support. Go to the FCC web site and read the
minutes yourself.

>get it. Do tell.

Well, Sam Harris did invent the parametric amplifier, and Heddy Lamar
(she was an amateur in spirit if not in license) invented SS, but you
are correct that completely novel ideas haven't often come from amateurs.
However, that's not the prime amateur function. Amateurs serve to take
research concepts and turn them into cheap practical systems. An example
is packet radio. DARPA did the original research, but it was amateurs who
found ways to do it easily and cheaply. In fact, during Desert Storm,
the US military bought off the shelf *amateur* packet equipment to use
for transmitting tasking orders between armored units in the field. Their
own very expensive systems weren't ready yet. TAPR did for thousands of
dollars what the military and industrial suppliers couldn't deliver
for millions of dollars.

Amateurs were the first to adopt superhetrodyne receivers on a wide
scale. At the start of WWII, the typical *amateur* station was better
equipped than the typical military facility. Many of the designs used
for wartime military radios were lifted whole cloth out of the pages
of QST from the 1930s. And many of the radios developed during the
war came from *amateurs* who stepped into the war plants to design and
produce them.

Amateurs didn't invent SSB, Bell Labs did, but *amateurs* were the first to adopt SSB on a large scale, the first to show it was a practical method for mass use by semi-skilled operators, and the driver behind SAC's adoption of SSB.

Dr. Ulrich Rohde says in his book on receiver design that it is thanks to the intense demands put on HF receivers by *amateurs* that modern military and commercial HF receivers are as good as they are. Amateurs serve as the world's largest communications stress testing service, IE a beta test group, and they pay for the privilege of doing so. No industrial developer can afford that level of real world testing, and the military never stresses their radios to the limit except during wartime. Only amateurs routinely duplicate the chaos of a hostile RF battlefield environment when they chase Dx.

And more to the point at hand, it was *amateurs* who developed and demonstrated the concept of little LEO store and forward digital satellites, and proved it could be done cheaply, and be made to work with simple Earth stations operated by semi-skilled people. This idea didn't come from NASA, whose idea of a digital comsat is typlified by the hugely expensive TDRSS system. This idea didn't come from industry, where comsats mean hugely expensive GEO analog transponder equipped satellites. This idea came from the *amateurs* at AMSAT. And the money and labor to make it happen came from those same *amateurs*.

Amateur radio operators *created* the very industry that is now trying to grab our bands. Sputnik and Vanguard I may have been the first little LEOs, but it was an *amateur* satellite that was the first little LEO *comsat*, and it was an *amateur* satellite that was the first little LEO *digital* store and forward comsat.

It was ever thus, however, *amateurs* also pioneered broadcasting. It was *amateurs* who first proved that there was an audience for broadcast news and music. The first broadcast stations were *amateur* radio stations. *Amateurs* may not have invented all the technology of modern radio, but it has been *amateurs* who have debugged much of it, and driven it to become practical and inexpensive and applicable to a mass communications market.

Industry owes amateur radio a huge debt, and they'd be eating the seed corn if they grabbed the bands we've used to develop and demonstrate the concepts that they now wish to commercialize.

>a good thing...

Absolutely, an experimenter intercom. Good old FM repeaters serve another
important function too. They serve as "watering holes", places where
amateurs gather for bull sessions. It is out of these bull sessions that
many of the ideas for amateur advancements come. There likely would be
no GRAPES, or WA4DSY 56 kb RF modem, if it hadn't been for bull sessions
on a certain local repeater. Amateur experimenters are too scattered and
too busy to hold many face to face meetings. Most of the discussions
occur on good old FM repeaters as these amateurs commute to and from
their real jobs.

aga_ahmed@sahara.com (Aga Ahmed) wrote:

> Hi

> I have some confusion of the following words:

> 1- LEASED LINES
Leased lines are used as dedicated lines. They can be digital or analog. We use these a lot in the type work I do. Usually the digital lines are a bit faster, but this is barely perceptible from my point of view. You get these installed by the local phone company and are charged a flat rate.
> 2- ISDN
ISDN (Integrated Services Digital Network) allows for 128kbps transmission. 128kbps is only possible with an internal ISDN TA(terminal adapter). A terminal adapter is a better name than modem. A MO(dulate)DEM(modulate) implies the changing of a digital signal to analog and back to digital. A terminal adapter allows you to interface you computer with a digital line. An external TA is limited to the throughput of you serial port (around 96kbps). That is still a helluva lot faster than my 14.4kbps connection. ISDN is set up with 3 full-duplex channels. Two of the channels can be setup to handle voice, data, or both. These are 64kbps. The third channel carries special packet and data signals at 16kbps. The third channel is what ensures correct operation in the line. Combining the two 64kbps channels is what allows you to have a 128kbps connection.
> 3- OPTICAL FIBER
Optical fiber allows the communication of data over light waves. The limited experience I have with it is classroom only, but I can tell you that it works great. It does involve the use of some type decoder to get the info to light.

> Johnson LTR trunking, AMPS, TACS, and such things have amateur
> equivelents?

Well, they're all trunking radio systems using standard FM
transmitter's and receivers. Range, audio quality and
interference rejection isn't better, and most don't allow direct
communication between mobile units. They're just equipped with
special control protocols that attempt to make better use of
existing channels by assigning members of a 'group' to an
available channel when a group member requests a channel.
Because of the involved protocol, all of these trunked schemes
have problems when mobile units are in bad signal areas, like
the coverage fringe, downtown multipath zones and inside
buildings. Conventional two way radios would still have some
capability in these areas.

Kansas City is not happy with the EDACS system they just bought,
seems firefighters inside buildings with a handy-talkie can't
talk to other fighters in the same building! Ericsson's saying
they need more repeaters in smaller zones, even though Ericsson
planned the system in the first place. Anyway, Kansas City
is still using their old VHF system until they feel the new
EDACS is at least as reliable.

> ==
>> What new technology are you thinking about, Brian? Direct
>> sequence or frequency hopping spread spectrum, maybe? Hams have

>> as FM and costs a lot more.

>Works great and doesn't cost all that much more. If your arguement were
>true then why has most of the commercial carrier hops gone from analog to
>digital SS?

They are using protected frequencies, i.e. no strong signals
close in frequency. Also they are not mobile. Because of the
needed broadband receiver front ends, the total power received
from all signal sources in the passband can easily overload the
receiver's mixer/despreading stage. They work fine as long as

the receiver's not close to other transmitters and the signal
strength remains above a critical threshold, otherwise you hear
nothing. Mobile multipath anihilates the direct sequence
signals mostly due to the time shifting of the received signal
throwing the correlator out of time. At least with FM you
could still communicate when the SINAD ratio drops to 6dB.

>> Or perhaps narrow bandwidth digital
>> voice? Again, doesn't work nearly as well as FM, costs way more
>> and sounds really sh*tty!

>Again this works great. Sure the audio quality leaves something to be
>desired but we're talking about communications not broadcast. This is a
>field that hams could develop and work on to show they still have the
>right stuff but so far I don't see anyone trying that on the amateur
>bands.

Narrow bandwidth digital voice has neither the range or the
audio fidelity of FM. You can communicate via FM with a SINAD
ratio of 6dB, the digital voice equipment can't. Plus when in a
multipath situation, like mobiling through downtown areas or at
the fringe, entire words and phrases get chopped out of
transmissions. Users also complain about not being able to
recognize who is speaking when listening to the transmissions.
The handhelds, if available at all, are monsters about double
the size and weight of FM units with the same transmitter power
and about triple the cost. Also the different manufacturers'
systems aren't directly compatible between each other. The APCO
project 25 compliant radios also delay the audio excessively
when being repeated, mobile police units at a crime scene have
to contend with the 'stadium' echo effect whenever one car
transmits.

>> Or amplitude compandored single side
>> band? Hams did that too, doesn't like multipath and costs way
>> more. (Although Midland/Securicor's DSP derived ACSSB neatly
>> solved the multipath problems, but still will cost a lot more to
>> build than FM.)

>work out those bugs they would stand to make some money. That's why
>Midland is doing it. But why not any hams? None of what you have
>mentioned is cost prohibitive for most hams to play with on some level.

They could 'play' with it, but if they know radio very well,
they'll crunch the numbers to see what they have to do to beat
existing radio technology. What's so broke about FM and SSB that
we need to fix it? All the commercial equipment you've been
referring to incorporates complex protocols, circuits and
software intended to surmount unique problems seldom found in
amateur radio.

>> Cellular phone, no new technology there, just
>> reapplication of stinky old FM.

>Really? Sure it uses frequency modulation but could you please send me
>the details of your trunked amateur repeater system? It seems to me that
>cellular's trunking and hand off abilities are something I've not seen on
>amateur radio anywhere. Please advise!

What possible use is a trunked system in amateur radio? Would it
give better range? Only if one QSO could use several frequencies
and the widely spaced, area-wise, repeaters were linked together.
This sacrifices the number of available frequencies in an area
in exchange for range. Might work in rural areas, but not
cities. If all the repeaters are co-located, you can have more
QSO's in a given, smaller, area but this hardly requires trunking to
achieve, just QSY to an idle repeater frequency.

I might support an ID encoder, manually triggered, that would send
a ham's call to the repeater he's currently monitoring and a
decoder at each repeater. If there was a packet link between
repeaters and approriate software in the controllers, you could
interrogate any repeater in the system with the call you're
looking for and a voice synthesizer would tell you what repeater
to find him on.

>> Besides, where is it written a ham band must be used to develop
>> new technology to remain a ham band? Must be only in your diary,
>> Brian.

>Um, something in the FCC rules about amateur radio advancing the state of
>the art maybe?

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an
amateur radio service having a fundamental purpose as expressed in the
following principles:
(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service, particularly
with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and technical
phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to
enhance international goodwill.

Ok, there is 97.1(b), but it isn't specific to the 144 and 440MHz
bands, it's general.

>> Public service is the main reason for the existance of ham radio.
>> If it is perceived by the decision makers that ham radio is not

>> serving the public interest, it's history. Two meters and 440
>> are the most used frequencies in normal and disaster conditions.
>> Their loss due to a techno-babble boondoggle would be another
>> disaster.

>What you say about two meters and 440 is too true and I couldn't agree
>more. But the main reason for the existance of ham radio is NOT public
>service! You scan those bands for a day, spend another day on 20 meters
>and then tell me that public service is the main reason for it's
>existance. It's for rag chewing recreation. We pay for that privilege by
>claiming to provide public service, promoting international goodwill, and
>advancing the state of the art. Sometimes we actually, accidentialy, get
>around to doing some of that but the main reason amateur radio exists is
>to shoot the breeze.

There was a time when ham radio was the only way to get messages
to friends or family in remote areas. With the coming of the
global village and improved worldwide availability of phone
service, ham radio is needed only when a disaster wipes out
commercial communications systems or emergency communications
must be established in areas lacking other means. Having hams
yakking all the time at least proves their equipment is
functioning and they know how to use it.

>> Why? Is it progress if you have to get out of it's way? If it's
>> really progress it'll happen without rolling over anyone.

>Lead, follow or get the hell out of the way, right?

Not at all, march to the beat of a different drum and take the
path less traveled. No need to honk the horn and shout, nobody's
obligated to make things easy for anyone else by getting out of
the way.

It is a surprisingly well built unit (considering where it comes from,
very surprisingly well built). It is *not* a "sniffer". It wants a good
signal level before giving you a reading. But for most uses that's a
plus not a minus. I like it as a very handy utility counter.

Better than that, I know how to spell amateur. In the context of the
amateur radio service, the word amateur means we do what we do without
pay, IE we are a volunteer radio service. It does not, however, mean that
our efforts should be incompetent and clumsy. Just as the amateur sportsman
strives to achieve the high standards exhibited by professional athletes
when he plays, the radio amateur should similarly strive for excellence
in his activities.

What about the web site:

http://www.ualr.edu/doc/hamualr/hamualr.html

?
Included in this site is a callsign lookup. The callsign lookup data
base has up to the minute data from the FCC about (I know, only US) call
signs. We have been using this to figure out exactly when we can use
our upgraded/renewed licenses, and it has a pretty good search engine
to find names as well as call signs (and zip codes, etc.).

Hi,
You will use the same freqs in Santa Rosa, as in So Cal. 144.99,
145.01, 145.03, 145.05. APRS is on 145.01.

The amount of work inside the radio to do this is probably not worth the
effort, you will end up with a bunch of wires hanging out the radio
and it still won't work 9600 baud very well.
I'd recommend getting something like a TEKK KS-900 single channel
crystal UHF radio. They work 9600 better than any synthesized radio
and only cost a little over $100.
Another alternative is get a surplus Motorola Mitrek UHF radio, order
crystals and perform a small rewiring modification. Mitreks can be
found for $50 to $75 and crystals will probably cost you $40 or so.

Actually, you would be far better off buying a crystal rig like the
Tekk or Motorola offerings, for high-speed packet. They offer much
better BER's than voice-grade rigs that have had data interfaces
kludged on top of them.

Ah, really? Obviously we disagree on this one. Just buying the latest radio from Japan is not technical progress. I equate ham radio with technological development. Obviously not everyone agrees with this position, but i think you'll find historically the innovative applications of technology, and experimentation by ham radio ops has been sort of a 'bragging' point in support of ham radio. The public service aspect is another one but early on, the technical aspects were a (if not 'the') mainstay. Not true today. The majority of ham's are nearly baffled by their appliance.

>But you have your ideas and by the way just what the hell

yea yea, sure. You are fooling yourself by thinking everyone is convinced that amateur radio is such a great public service asset. Around here, when the power goes out so do 90% of the local repeaters. Ham radio's reputation is summed up by this typical response from a local public official, "oh, yea, CBers right? No thanks, we can handle it with the equipment we have...".

None of the current crop of HTs is suitable for 9600 baud, Joel. And even the mobile rigs which *claim* to be "9600 ready", aren't. There is one 70cm radio, the Azden PCS9600D, which really is 9600 ready, the rest are just blowing advertising smoke.

The problem is that the current crop of radios are synthesized, and modulation is introduced inside the synthesizer loop. The loop filter will distort the 9600 baud modulation and yield a high BER. A crystal controlled direct FM radio, such as a Motorola commercial surplus radio, or old amateur HTs like the Wilson 1402SM, or purpose built data radios like the TEKK or the Kantronics, can be successfully used to properly transmit 9600 baud. A couple of multimode radios, the IC820H and the Yaesu FT736R, can be made to transmit 9600 baud correctly as well. That's because they, like the Azden mentioned above, do modulation *outside* the synthesizer loop, IE at IF, and thus don't suffer from the distortion that almost all other synthesized amateur rigs have.

Now that's half the battle. The other half is on the receive side. Many of these radios have IF filters which are too narrow for 9600 baud usage. Filters become very non-linear with respect to phase near their passband edges. This phase distortion tends to "close the eye" for 9600 baud packet. That increases BER to an unacceptable level. The cure is to use a different filter with better group delay, or just use a wider filter so that the signal doesn't encounter the passband edges. The more expensive radios tend to have the tightest filters, and thus tend to fail first in this area. The IC820H is an example of this. While it can transmit 9600 baud correctly, its IF filters are too narrow and distort received signals in phase too much for good performance.

For 9600 baud packet, you want a simple crystal controlled radio with direct FM, and with a receiver having an IF filter selected for data rather than voice usage. Two such examples are the data radios from TEKK and Kantronics. The KS-900 also has the charms of being smaller than a HT, and much cheaper. The D4-10 runs more power, but costs about as much as a voice radio.

Hams have the idea that they can press voice radios into data service because it worked at 1200 baud Bell 202. But it doesn't work at higher speeds with FSK or MSK waveforms. You need a

purpose designed data radio, or even better, a RF modem which is both modem and radio in one. Fortunately, there are inexpensive choices available in this area. The KS-900 is only a little more than $100, and the GRAPES 56 kb RF modem kit is only $250.

Most amateurs who become seriously enough interested in packet to make the move to higher speeds than 1200 baud are going to find that they have to dedicate a radio to packet anyway, and they'll need to leave it on the local LAN frequency so that the network can find them. Thus there's little use in worrying about dual use frequency agile radios which can be pressed into voice service as well as data service. Buying a true data radio or RF modem in the first place is much the better choice, both from the standpoint of performance and total cost.

<snip by psoileau>

A radio that we've had plenty of success with operating 9600 baud packet is the General Electric Custom MVP. The local club got several dozen which were taken out of oilfield service recently. You can get a set of crystals for about $20. Let me know if you'd like one.

Well, not exactly, but there are KISS-only eproms available for TAPR
TNC-2 and clones. One advantage is that you don't have to worry about
the TNC unexpectedly dropping out of KISS mode (it does happen!)

You still need all of the hardware in the TNC, but could get away with
less RAM.

Images are available on ftp.tapr.org (/tapr/software_lib/tnc/eproms.exe)
and programmed eproms are available from TAPR as well.

3057. Assault on Ham Radio - 2m/70cm related to CW !!

Newsgroup: rec.radio.amateur.digital.misc
Date: 1996-06-15 00:00:00 UTC
From: Phil Sussman <pactor@pactor.com>
Message-ID: <31C2ACFB.6733@pactor.com>
Source record: 36503
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Amateur Radio is under assault. This is because commercial activities
are recognizing the financial gain that can be realized by using ANY
frequency they can 'lay their hands on'. This includes HAM RADIO
because we are seen as fragmented.

Here is what I mean. There is a move afoot to 'eliminate' CW as a
requirement for Hams worldwide. Of course it started as a 'grass-routes'
campaign somewhere and honestly so. However, some of the people who
are most in favor of it are (you guessed it) 'Commercial interests'.
Now why is that? Simply because if we 'give up' anything, we are seen
as being able to surrender EVERYTHING.

Here are some glaring examples:

1. SPOC (single point of contact) is a recent concept where one
organization or body is responsible for communicating between
members of that organization and other authority. If one were
to 'control the SPOC' (buy it, steal it, or run it) members
could be 'had'. SPOC is a bad idea for hams because it removes
individuals from redress.

2. Eliminate requirements: While it is always best to move with
the times there is a difference between changing rules and
elminating them. It is a double edged sword, if you make it
so much easier for new Ham Operators to arrive on the band,
you also make it that much easier for commercial interests to
gain a foot-hold via that route.

3. Deregulation: Turning certain functions and missions over to
the private sector (coordination, licensing, testing, call sign
assignments, violation monitoring) makes it much easier in the
future for a commercial 'attack' on the need for ANY regulation.
Once that is done the BANDS are ripe for picking.

4. Alternatives: Internet is being touted to hams as an alternative
to Ham Radio. After all any of us over here on Internet are NOT
on ham radio. That's why commercial commnications interests are
so happy to promote Hams moving to a 'higher plane' and off the
hams bands.

Before we surrender CW, or HF, or 2m or 70cm, we ought to THINK
first. That's why after I type this message, I'm going to be on 20m.

My Point: Talk is cheap.. when it comes to Amateur Radio

USE IT OR LOSE IT...

Enough said! 73 from Ohio - de Phil - KB8LUJ

It sounds as though you have an RF problem. Check all of your grounds,
and make sure everything is tightly bonded together (even the KAM).

Does the problem persist into a dummy load?

[rearranged]

: How can i test jnos whether it sees my com1 or not?

OM,

Leave the tnc in AX.25 (non KISS) mode, and start jnos. Enter a
command to directly talk to the TNC:

tip <iface> -cr-

where <iface> is the designation given to the port of your tnc. At my
site, the command is

tip ax0 -cr-

If you can communicate directly with the tnc, your interface is set
correctly.

: Jnos worked on my machine when I first installed it. Then I switched it off
: and now it doesn't.

There is an incompatibility between KPC-9612's and jnos: when you exit
jnos and return, you'll often find the tnc appears to have gone deaf,
i.e., you won't see any incoming packets on the trace screen.

You can cure this problem in two ways:

1. Use a tip session, as above, with the radio turned off. You'll see
a lot of garbage when you enter the tip session: this is the stuff your
tnc was holding onto. Close the tip session (via a "reset" command) and
you'll be OK after that. Until the next time :-(.

2. Force your tnc out of KISS mode, via a command like

comm ax0 [alt-192, alt-255, alt-192] cr

and then do a tip session and order it back into KISS. This method is,
of course, the last resort.

JNOS hackers take note: please modify jnos to tell KPC-9612's to flush
buffers on startup!

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hi Phil, methinks your logic is upside down. If we increase the
requirements (the opposite of giving up or surrendering) then
the number of hams will be so small that it won't matter if
we lose our bands. In today's society, strength comes from
having the biggest gang. After all, that is what democracy
is all about. The greatest number voting the greatest good
for the greatest number at the expense of the rest.

How anyone can twist logic to relate loss of vhf/uhf bands
to the elimination of Morse code testing is unbelievable.
If only we had required Morse code tests for no-code techs
then nobody would be trying to get our frequencies. duuhhh!

hi there,
the jvfax7.0 is a fine program for all meteosat users (not only for them).
the author eberhard backeshoff has made a good job, even in the design of
the overlay-maps.
But unfortunatly there are no borders for the different countrys.
Im searching for a overlay map (meteosat format d2 and c03) w i t h the
borders if all european states.
if youve any idea how to add this borders to the existing overlay maps,
please let me know.
thanks in advance

Source record: 36509

I would like to try some RTTY this field day. I have available a pk-232 with a ps2 model 30/slow with DOS. I do not have any software though. Where can I download RTTY software? Where is the best place to look for RTTY on the HF bands? Any other help would be appreciated.

[snip]

You could argue exactly the opposite - that by keeping CW as a
requirement for certain licence classes, we make ham radio appear to be
an anachronism, with no relevance in modern communications!

: Now why is that? Simply because if we 'give up' anything, we are seen
: as being able to surrender EVERYTHING.

Your logic evades me. Eliminating the obsolete CW requirement
does not mean that we are surrendering the CW subbands, but rather
than other HF users need no longer be competent CW operators. In
reality, we would be gaining a lot of HF operators, making it even
less likely that those bands would be threatened.

: Eliminate requirements: While it is always best to move with
: the times there is a difference between changing rules and
: elminating them. It is a double edged sword, if you make it
: so much easier for new Ham Operators to arrive on the band,
: you also make it that much easier for commercial interests to
: gain a foot-hold via that route.

A proper reform would be one similar to the novice enhancement
of 1987. Some doomsdayers predicted the worse, but it actually
